 NOT ESTABLISHED

A AIRPORT MRT LINE 桃園機場捷運線			
LINE CODE A ^[1]	STATIONS 22 (A1 – A22) ^[2]	OPENING (A1 – A21) 2 March 2017 ^[7]	EXTENSION OPENING (A22) 31 July 2023 ^[22]
UNDERGROUND / ELEVATED STATIONS 7 underground, 15 elevated ^[4]	OPERATOR Taoyuan Metro Corporation [/rail/operators/tymc/] (桃園大眾捷運股份有限公司), a joint venture of Taoyuan, New Taipei and Taipei city governments ^[8]	OWNERSHIP SPLIT Taoyuan [/rail/thsr/stations/taoyuan/] 64.01%, New Taipei [/rail/thsr/stations/taipei/] 29.32%, Taipei [/rail/thsr/stations/taipei/] 6.67% ^[9]	

The Airport MRT is Taoyuan Metro Corporation [\[/rail/operators/tymc/\]](#)'s one currently operating line, connecting Taipei [\[/rail/thsr/stations/taipei/\]](#) Main Station to Taoyuan [\[/rail/thsr/stations/taoyuan/\]](#) International Airport and on to Zhongli via 22 stations. ^[1] ^[2] TYMC itself is not Taoyuan City's own corporation: it was jointly founded on 6 July 2010 by the Taoyuan, New

Taipei and Taipei city governments in proportion to each city's share of the route, with capital of NT\$3 billion, and the Ministry of Transportation and Communications designated Taoyuan City to operate it. ^[8] ^[9] The ownership split is Taoyuan 64.01%, New Taipei 29.32% and Taipei 6.67%. ^[9]

Route length: three figures, none silently picked

This site's own committed TDX data gives route A-1's length as 51.76 km, the sum of surveyed inter-station chainage to the current terminus at [A22](#). ^[3] ^[2] New Taipei City's own project record and an Executive Yuan background page instead independently agree on 51.03 km, split as roughly 10.92 km underground and 40.11 km elevated across 7 underground and 15 elevated stations, with two maintenance depots. ^[4] ^[5] zh.wikipedia's infobox gives a third figure, 51.95 km, not traced to any source cited within the article itself. ^[6] Nothing read for this page explains what the three figures each measure differently; all three are published rather than averaged or one chosen as authoritative.

The same New Taipei project record gives the initial line's construction cost as 「工程建設總經費約 1,138.5億元」 — 1,138.5億元, which converts to NT\$113.85 billion, not the ten-times-larger NT\$1,138.5 billion a literal digit-for-digit misreading of the Chinese unit could produce. ^[4]

From a failed BOT to a government-built line

Planning has at least three defensible starting points, and different sources plainly mean different things by it: an October 1989 feasibility study is the earliest date found, though only at secondary strength; in October 1996 the central government decided to build the line under a Build-Operate-Transfer (BOT) model; and Long Life International Development Co. (長生國際開發) won the BOT bid in 1998. ^[10] The BOT arrangement collapsed on 31 December 2002, when Long Life and the then High Speed Rail Bureau agreed to terminate the contract. ^[10] The government took direct responsibility afterward: MOTC designated the High Speed Rail Bureau as the project's construction body on 28 October 2003, and the central government approved the construction plan on 9 March 2004. ^[7] ^[4]

Construction start likewise has more than one dated event rather than one clean answer: New Taipei's project record gives 27 February 2006 for the formal start of the Sanchong–Airport–Zhongli section and its E&M systems, while TYMC's own company history instead records a ceremonial groundbreaking on 26 June 2006, presided over by the Premier. ^[4] ^[7] The line opened on 2 March 2017 for stations [A1](#) through [A21](#), after the originally announced January 2009 target had been publicly revised six times — the specific dates and reasons for each of the six changes are not established by any source read for this page and stay TBC. ^[7]

The Marubeni dispute: two confirmed figures, one unconfirmed total

Around the 2017 opening, contemporaneous wire reporting recorded the then High Speed Rail Bureau imposing a NT\$2.5 billion delay-penalty cap on contractor Marubeni Corporation (丸紅), the contractual maximum, plus a separate NT\$1.9 billion performance bond withheld over Marubeni's unauthorised subcontracting of the signalling system to a British firm — its contract required Marubeni to design that system itself. ^[11] Marubeni separately counter-claimed NT\$12.9 billion against the Ministry, on the grounds of repeated Bureau-directed design changes. ^[11] No source read for this page states a combined total for the dispute of any kind: NT\$2.5 billion plus NT\$1.9 billion is NT\$4.4 billion, not any commonly-circulated larger figure, and the individual component figures are published here on that basis rather than an unconfirmed total.

A separate, later dispute in 2021 concerned in-service performance rather than construction delay: the Public Construction Commission recommended withholding NT\$726,926,496 from Marubeni for missing three contractual operating standards — express journey time, average speed and train headway. ^[12]

Rolling stock: two fleets, two manufacturing arrangements

The express (直達車) fleet is the purple 2000-series, built entirely by Kawasaki Heavy Industries: 11 five-car sets (201–211), 55 cars, running on third-rail DC 750V power at 1,435 mm standard gauge, with a 100 km/h operating speed. ^[13] The commuter (普通車) fleet is the blue 1000-series, built under a split arrangement: Kawasaki built the prototype and sets 101 and 118–120, while the remaining sets 102–117 were assembled domestically by Taiwan Rolling Stock Co. (台灣車輛) under an industrial-cooperation programme. ^[14] Twenty four-car 1000-series sets, 80 cars, are in current service, each carrying 188 seats. ^[14] Both fleets are maintained across two depots, Qingpu and Luzhu, though no source read for this page allocates specific trains to one depot over the other. ^[15]

Express, commuter and journey times

TYMC's own current route page fixes the express (直達車) stop pattern at five stations — [A1](#), [A3](#), [A8](#), [A12](#) and [A13](#) — with a peak-hour "Huanbei Express" (環北直達車) pattern adding [A18](#) and [A21](#); the commuter (普通車) service calls at every station, [A1](#) through [A22](#). ^[16] A Taoyuan City tourism page gives express journey times of 35 minutes from Taipei Main Station to Airport Terminal 1 and 39 minutes to Terminal 2, and commuter times of 82 minutes from Taipei Main Station to Huanbei and 19 minutes from Taoyuan HSR Station [\[/rail/metro/stations/a18/\]](#) to Terminal 1. ^[17]

Fares and the financial turnaround

TYMC's own ticketing page states combination-ticket prices — an airport-line return plus a Taipei Metro [\[/rail/operators/trtc/\]](/rail/operators/trtc/) 48-hour pass for NT\$520, or a 72-hour pass for NT\$600 — without itself restating the base single fare in the section read for this page.^[18] A NT\$10 single-fare discount was withdrawn from 2 January 2025, attributed by the company's chairman to rising electricity costs.^[19] Whether express and commuter fares differ for the same journey is not established by any primary source read for this page and stays TBC rather than repeated from secondary aggregation.

The line's finances turned around after years of loss: a 2022 negative net worth of NT\$706 million forced a NT\$1.067 billion bank loan; 2023 was the first profitable year, though no source read for this page gives a specific NT\$ figure for that year; 2024 profit is reported at "over NT\$400 million" by one February 2026 retrospective and at NT\$500 million by an earlier estimate published nine days before that year's end — both published rather than reconciled, since the second may be a projection rather than a final result.^[21]^[19] The 2025 surplus reached a record NT\$679 million, with nearly NT\$1.1 billion of debt fully repaid by April 2025 and annual ridership over 46 million, up 12% on 2024.^[20]^[21]

The 2023 extension, and what comes next

A22 Laojie River Station [\[/rail/metro/stations/a22/\]](/rail/metro/stations/a22/) opened 31 July 2023, extending the line about 2.06 km underground beyond the former terminus at Huanbei.^[23]^[22] The Railway Bureau's own opening announcement gives three delay causes together, not one: COVID-19-era disruption to foreign electrical-and-mechanical suppliers between 2020 and 2022, the technical difficulty of integrating the extension's newer signalling generation with the existing line, and design changes needed to coordinate with a separately-planned Taoyuan railway-undergrounding project.^[22] The extension's total cost rose from an original approved NT\$13.801 billion, through a first revision of NT\$13.8 billion, to a final NT\$17.302 billion.^[23]

A further extension to Zhongli (**A23**) was under construction as of the sources read for this page, planned to connect with the future Taoyuan Metro Green Line.^[24] Taoyuan City's own current station table gives two different target years for **A23** within different sections of the same page — 117年 (2028) and 118年 (2029) — an internal inconsistency this page reports rather than resolves.^[24]

Ridership

The operator's published line total for 07/2026 is **3,976,430**. The table preserves the source's entry and exit dimensions where they are published.

LATEST MONTH	PUBLISHED TOTAL	ENTRY / EXIT	
07/2026	3,976,430	3,988,722 / 3,976,430	

A Line monthly trend. Exact values and dates are in the table below; entry and exit dimensions are retained where the source publishes them.
