G0 Beitun Main Station

G0 Beitun Main Station (北屯總站) — stop 1 of 18 on Taichung Metro's Green Line, in 北屯區.

G WURIWENXIN BEITUN LINE [/RAIL/TMRT/LINES/GREEN-LINE/] 烏日文心北屯線			
STATION CODE G0 ^[1]	TRADITIONAL CHINESE 北屯總站 ^[1]	DISTRICT 北屯區 ^[1]	TDX SEQUENCE 1 ^[1]
TDX CHAINAGE 0 ^[1]	LATITUDE 24.18913 ^[1]	LONGITUDE 120.70864 ^[1]	STRUCTURE Ground level ^[3]
CIVIL PACKAGE CJ910 ^[4]	OPERATOR Taichung Metro Corporation [/rail/operators/tmrt/] ^[2]		

Beitun Main Station is stop 1 of 18 on the Green Line, and the committed TDX record pairs the code **G0** with the Traditional Chinese name 北屯總站. ^[1] TDX places it in 北屯區 at 臺中市北屯區敦富東街100號, with a published route chainage of 0.00 km in the selected direction. ^[1] The address is the source-backed siting description used here; no extra catchment boundary is inferred from it.

The station belongs to the CJ910 civil package. ^[4] That package covers **G0**, the Beitun depot and the northern track system, so the station is part of the line's depot-end civil works rather than an isolated stop. The separate CJ900/CJ907 contract covers system equipment, including power, communications, automatic fare collection, depot equipment and trains. ^[5]

The operator describes the Green Line as a steel-wheel, medium-capacity, fully driverless system using two-car trains. ^[3] It identifies **G0** as one of the two ground-level stations; the other 16 stations are elevated. ^[3] That system-level engineering fact is kept separate from the station address because TDX publishes the latter but not the former. ^[1] ^[3]

The operator's current public-art roster assigns "Floating Island" (漂浮島) to this station. ^[6] That attribution is kept separate from the station's structural description: a work title is evidence of the operator's art programme, not evidence that the station is underground, elevated or interchange-built. ^[6]

The operator's major-events chronology places the 2015 construction beam accident at the **G4**/**G5** site and separately dates the 2020 joint-shaft fracture during test operation. ^[7] The entry is therefore part of a documented line history, but neither event should be assigned to this station unless the source does so explicitly.

Position and civil package

The committed TDX station record places **G0** at sequence 1 of the Green Line, in 北屯區, with a published chainage of 0.00 km for the selected direction. ^[1] This is a position in the operator's station order, not a travel-time or distance-between-stations claim; TDX publishes the chainage field but not a timetable for this page. ^[1]

The station is assigned to civil package CJ910 in the city rapid-transit bureau's project record. ^[4] The separate Green Line system-equipment package covers power, signalling, communications, fare collection, depot equipment and trains across the route. ^[5] Keeping those contracts separate avoids treating the civil package code as a station-specific equipment list.

The operator describes this Green Line station as ground level within a steel-wheel, medium-capacity, fully driverless railway using two-car trains. ^[3] The station record does not publish a platform length, daily ridership, staffing roster or station-specific opening ceremony; each remains TBC rather than being inferred from the line-wide map or from its coordinates. ^[1] ^[2]

Specifications

Latitude	24.18913 ^[1]
Longitude	120.70864 ^[1]
Route chainage	0 km ^[1]
