

Network

The joint-operation system — one brand, one fare structure, many private companies — and the route numbering that encodes more than it appears to.

The page this folder exists for is an explainer, not a listing: how 聯營公車 works — who sets fares, who owns the buses, what the city controls and what the companies do — and how the route numbering system encodes direction suffixes, short-workings, branches, trunk routes and minibus services in ways no English source explains. **One of those pages is now written** — see the joint-operation network [/bus/network/joint-operation/]. Writing it cost this section most of what it thought it knew. Several claims that had been sitting in research notes did not survive their first check against the regulator: the numeric bands turned out to have a competing and better-sourced explanation, the feeder-colour table was missing a line, and the revenue-pooling model that was supposed to be the whole point of the page is not described by the office that runs the system. What is published is what survived those checks.

The joint-operation network

Around 280 routes, fourteen private companies and one brand. Four city regulations set out how the money actually moves — and the central revenue pool everyone repeats is in none of them.

An independent, non-commercial reference site. Not affiliated with Taipei Rapid Transit Corporation, Taipei City Government, or any bus operator. Line colours are the official values published by each operator through Taiwan MOTC's open data platform. [About this site.](#)

Station names, codes and sequence from TDX Transport Data eXchange, Ministry of Transportation and Communications, operators TRTC, NTMC, and TYMC. Government open data. Retrieved 2026-08-10; source last updated 2020-01-31. The 12 Sanying station records absent from TDX are sourced directly to New Taipei Metro and government publications on their pages. Provenance.
