

[← Back to Data](#)

Official line colours

9 of the 10 are taken from the LineColor field published by each operator through Taiwan MOTC's TDX platform, retrieved 2026-08-10. The rest are read from the operator's own material, and the Source column says which is which.

LINE	OFFICIAL	ON WHITE	ON BLACK	BADGE	ACCENT INK	OPERATOR	SOURCE

Three values per line, not one. The official colour is chosen to be told apart on a map, not to carry type. Several fail 4.5:1 against white or black, so a badge fill and an accent ink are derived from each one — same hue, lightness reduced until it clears WCAG AA with a small margin. Every derived value on this site is generated that way, never picked by eye.

What everyone else has

LINE	OFFICIAL	COMMONLY CITED	Δ	WHERE THAT VALUE COMES FROM
BR	 #B57A25	 #C48C31	26	Wikidata, cited to a TRTC route map
R	 #D90023	 #E3002C	13	en.wikipedia Module:Adjacent stations
G	 #107547	 #008659	29	en.wikipedia Module:Adjacent stations
O	 #F5A818	 #F8B61C	15	en.wikipedia Module:Adjacent stations
BL	 #0A59AE	 #0070BD	29	en.wikipedia Module:Adjacent stations
Y	 #FEDB00	 #FFDB00	1	no source found
LB	 #48B6D2	 #4EC3E0	20	"PANTONE 637 C", unconfirmed, through the commonest of four disagreeing converters
A	 #8246AF	 #8E47AD	12	Wikidata

The one that is not from TDX

The Sanying Line opened on 30 June 2026 and has no record on the platform of any kind — no line record, so no LineColor to read. Every operator code on TDX was probed for it; New Taipei's two light rail lines turned out to be filed under codes of their own, and there is no equivalent for Sanying.

What settled it was the operator's own line mark: New Taipei Metro publishes the LB roundel on its Sanying Line station page as a 156×156 lossless PNG, and the whole ring — a third of the image, to the pixel — is #48B6D2. That is the operator rendering its own line identity at a known value on its own site, which is the same kind of thing a LineColor field is, read out of a different file.

The PANTONE figure is a genuine loose end. "PANTONE 637C" circulates for this line and could not be confirmed anywhere: not on the operator's site, not on the New Taipei rapid transit bureau's route page or its identity page, and not in either Wikipedia article — all of which say only 淺藍色, light blue. Nor is it a value you could simply adopt: the third-party PANTONE-to-sRGB converters disagree among themselves (#4EC3E0, #4DC5E2, #42BFDF, #48A8D0), so taking the designation on trust would still mean picking one conversion over three others. The table above records the commonest of them against the operator's own value; the difference is what it is, and this page is not going to resolve it by choosing.

A warning about citation chains

Two of these are worth dwelling on, because they show a failure mode that is easy to repeat.

This site originally carried #B57A28 for the Wenhui Line. That was replaced with #C48C31 on the strength of a Wikidata value *citing TRTC's own route map* — which sounds authoritative and is the kind of provenance you would normally accept. The official value is #B57A25. The correction moved the value further from the truth than the guess it replaced.

The same thing happened with the Airport MRT. An earlier #8246AF was replaced by #8E47AD from Wikidata. The official value is #8246AF — exactly what was discarded.

The lesson is not that Wikidata is unreliable. It is that **a citation to an official source is not the same as the official source**, and confidence in a chain of references is not evidence about what sits at the end of it. Where a government publishes the data through an API, use the API.

Caveats

- **Circular and Airport MRT are not TRTC.** Circular is New Taipei Metro and the Airport MRT is Taoyuan Metro, so their colours come from those operators' records. A request limited to TRTC returns five lines.
- **These are screen values.** DORTS states its signage system defines Pantone, RGB and CMYK values per line; that specification is not published openly and may not match these hex values exactly. The Sanying Line is the case where that gap is visible rather than theoretical — see above.
- **The source data is not new.** See provenance [\[/data/provenance/\]](/data/provenance/).
