Rail

Lines, trains, depots and operators across Taipei's metro and light rail.

The network

All 10 lines across 3 operators, with a geographic map drawn from official route geometry.

Stations

Every station with a page so far — generated from the same registry that draws the maps.

Rolling stock

7 fleets, photographed where a picture exists, each linking to the line it works.

Depots

8 stabling and maintenance depots, by the line each one serves.

Lines

Route overviews, station lists, operating hours and service patterns.

Wenhu Line

Taipei's driverless brown line — no cab, a front window you can stand at, and a rubber-tyred guideway that climbs hills the rest of the network cannot.

BR 文湖線

Sanying Line

New Taipei's newest railway — a driverless elevated line to Sanxia and Yingge, open six weeks and in a dated free trial, documented from the operator and government.

LB 三鶯線

Tamsui–Xinyi Line

The red line — the network's north–south spine, from the riverside at Tamsui through the core to Xiangshan, and the oldest right-of-way on the system.

R 淡水信義線

Songshan–Xindian Line

G 松山新店線

The green line — three separate DORTS construction projects run as one, underground end to end, with the network's oddest branch climbing into the middle of a depot.

Zhonghe–Xinlu Line

O 中和新蘆線

The orange line — a Y-shaped route built as three separate projects, whose two northern arms to Luzhou and Huilong share one southern trunk through Zhonghe.

Bannan Line

BL 板南線

The blue line — the east–west trunk through the main station, built in eight openings over sixteen years, and the one line whose ridership its own operator does not publish separately.

Circular Line

Y 環狀線

New Taipei's orbital, and the line an earthquake took apart — eleven displaced girders, a 92 cm shove, eight months shut, and a Control Yuan report that traced it to a plate milled 36 mm too deep.

Danhai LRT

V 淡海輕軌

New Taipei's first light rail — street-running trams serving the Tamsui new town, built on Taiwan's own domestic light rail vehicle, with a second phase under construction.

Ankeng LRT

K 安坑輕軌

The second New Taipei light rail line — a valley feeder into the Xindian corridor, with a button you have to press to get the doors to open.

Taoyuan Airport MRT

A 桃園機場捷運線

The purple express-and-commuter line from Taipei Main Station to the airport and on into Taoyuan — a different operator, a different fare system, and the network's only express/local pattern.

History

How the railway came to be the way it is — the contracts, disputes and decisions whose consequences are still running.

The Matra dispute

BR Wenhua Line

Two disputes thirteen years apart, usually told as one — the test-track fires an engineering change explains, the seventeen-year lawsuit Matra won, and the walkout that taught Taipei how to buy its next railway.

Systems

The technology layer — signalling, power, guideway and automation — and why Taipei runs several of each.

Three numbering systems on one line

 Wenhu Line

Every Wenhu station has two numbers. On the southern half they run in opposite directions, and the northern half uses a different series again — because the line was built as two projects and a station was added to one of them late.

Operators

Who actually runs what — TRTC, New Taipei Metro, Taoyuan Metro, and eventually TRA and THSR.

Taipei Rapid Transit Corporation

The company that runs the Taipei Metro — city-owned, and distinct from the government department that builds the lines it operates.

New Taipei Metro Corporation

New Taipei City's own operator — light rail, the Circular Line, and now the Sanying Line.

Taoyuan Metro Corporation

The airport line's operator — a third city's company running the region's only express service.

Everything on rails: the Taipei Metro, New Taipei's light rail lines, the Taoyuan Airport MRT, and — eventually — the conventional TRA network and high speed rail where they serve the region. The section was renamed from "Train" because half of that list is not usefully described by the word.

Covered today: the Wenhu Line in full — the line, both fleets, both depots, each of its stations, and the Matra dispute that shaped the system. Other lines, fleets and depots have entity pages, so that every named thing on this site has somewhere to link to.

Station names, codes and sequence from TDX Transport Data eXchange, Ministry of Transportation and Communications, operators TRTC, NTMC, and TYMC. Government open data. Retrieved 2026-08-10; source last updated 2020-01-31. The 12 Sanying station records absent from TDX are sourced directly to New Taipei Metro and government publications on their pages. Provenance.
