Songshan Airport was not part of the first Neihu alignment: the project record says the Ministry of Transportation ordered a feasibility study in ROC 89 (2000) for a station that would directly serve airport trips.^[1] DORTS reports that the evaluation found an airport station on the Neihu Line more feasible in engineering terms and compatible with the construction schedule, after which the route was adjusted and the station added.^[1] The same project record says the Executive Yuan agreed in principle in ROC 90 (2001), the Public Construction Commission agreed to the funding arrangement in ROC 91 (2002), and the revised project cost was NT\$60.997 billion.^[1] The route leaves its elevated approach at Minzu East Road, enters the airport, and places the station beneath the surface car park in front of the terminal building.^[1] The project table identifies the airport station as BR1 in the Neihu engineering sequence, while the operating station is **BR13**; the two identifiers belong to different numbering systems.^[1] The CB420 section starts east of the station, uses shield tunnels below Songshan Airport, crosses the expressway and Keelung River, reaches Dazhi, and continues to the point where the line emerges for its elevated section.^[5] That section is about 3,460 metres long, with separate airport tunnel drives of 1,241 metres and 1,286 metres for the down and up lines.^[5] The two drives passed below the runway, apron and taxiway, and the published cover decreases from 27.8 metres near the Huajiang Street ventilation shaft to 18.8 metres at the airport-station end.^[5] DORTS records the airport crossing as Taipei Basin K1 lake-deposit ground, with a 50-to-60-metre layer of very soft silty clay whose low self-support and sensitivity made settlement a central construction concern.^[5] Because airport rules constrained when workers could enter and observe the site, the monitoring system combined automatic reading and transmission with manual observation during the night-time airport closure.^[5] The down-line shield drive launched on 8 October 2003 and reached the station diaphragm wall on 30 June 2004; the up-line drive launched on 8 September 2004 and arrived on 7 September 2005.^[5] DORTS's architecture account calls the station's design concept "A Story of Flight", using spiral-wing steel roofs to link the entrances and accessible lift and to suggest a pair of wings waiting to depart.^[2] That account also describes a ground plaza, water feature and curved ventilation-shaft wall as a combined place for activity, rest and artistic work rather than treating the entrance as only a circulation object.^[2] The official art table records Great Age of Travel at Exit 3, Flight Plan on the concourse wall and Dream Flight in the platform void, completed in October 2008 through open selection.^[3] DORTS's broader public-art record says Neihu works other than the donated Gangqian piece were funded through the Neihu Line construction budget, with DORTS handling selection and valuation and its eastern works office handling contracts, material subsidies and implementation.^[4] The checked CB420 and project pages identify the section and programme but do not publish an individual station contractor, award date or final station-package value, so those fields remain TBC.^[5]

BR13 on the Wenhu Line. Drawn from MOTC route geometry.

文山內湖線

PRIMARY Taipei City Department of Rapid Transit Systems accessed 2026-08-17

The full project record supports the Neihu extension's departure from Zhongshan Junior High tail tracks, its route toward Songshan Airport, and the airport-station siting decision. The original-language wording was checked on the linked page: the paragraph beginning 內湖線為銜接木柵線

and the sentence beginning 經評估以捷運內湖線於松山機場增設車站.

- 4 **Neihu Line public-art selection and implementation** [<https://ebook.dorts.gov.taipei/ebook/no2/files/basic-html/page257.html>]

捷運車站規劃與設計實務

PRIMARY Taipei City Department of Rapid Transit Systems accessed 2026-08-18

The full page lists the Neihu station design-topic summary, records the executed-artwork selection methods, explains that the original wall-art installations at Gangqian and Huzhou were cancelled after design changes because the walls were incomplete, explains the later donated Gangqian work, and states how DORTS handled selection, material subsidy and implementation. The original-language paragraphs beginning 各站公共藝術之設置地點及徵選方式, 原擬於文德站、港墘站及葫洲站 and 港墘站之作品為捐贈 were checked on the linked page.

-
- 5 **CB420 shield tunnels beneath Songshan Airport** [<https://ebook.dorts.gov.taipei/JRTST/ebook/no32/files/basic-html/page100.html>]

內湖線 CB420 標潛盾隧道穿越松山機場自動及人工監測系統應用

PRIMARY Taipei City Department of Rapid Transit Systems accessed 2026-08-18

The full technical-journal article supports the CB420 scope from Songshan Airport to Dazhi, the shield-tunnel lengths and dates, cover depths, K1 lake-deposit geology, and the automatic and night-time manual monitoring required by airport operations. The original-language paragraphs beginning 捷運內湖線 CB420 區段標之工程範圍 and 在地質狀況方面 were checked on the linked page.
