

Muzha Depot

Where the network started — the first depot Taipei ever built for a metro, and demoted in 2009 from the whole of the system's engineering capability to the junior of two.

BR WENHU LINE 文湖線			
CHINESE NAME 木柵機廠	OPERATOR Taipei Rapid Transit Corporation	LINE Wenhu	CONNECTS AT BR01
DISTRICT Wenshan	OPENED 28 March 1996 ^[2]	GRADE Third-level depot ^[2]	FLEET BASED VAL256 and Innovia APM 256 ^[2]

Muzha Depot from the south.

Stub page. This entry is an outline. Figures marked *TBC* still need to be checked against a primary source before publication.

Every train on the Taipei network traces back to this site. When the Muzha Line opened in 1996 there was nowhere else — no other depot, no other line, no other fleet. 木柵機廠 was the whole of the system's engineering capability, sitting at the foot of the hills beside BR01.

Thirteen years later it stopped being that. When Neihu Depot [/train/depots/neihu-depot/] opened in 2009 it took over as the line's full-function depot and as its primary operations control centre^[3], and Muzha was regraded from a fifth-level to a **third-level** depot^[2]. The oldest depot on the network is now the junior of the line's two^[2].

Facilities

DORTS lists storage, maintenance, operations control, washing, lineside maintenance and parts warehousing ^[1]. zh.wikipedia adds the buildings — a stabling yard, a workshop, a plant room, the control centre, a traction substation, a main substation, emergency power, a pumping station and a test track — with **12 stabling roads holding 84 pairs** ^[2].

Eighty-four pairs is a striking number against a line whose entire fleet is 152 pairs, and it rests on one source. It should be checked before anything is built on it.

Not established: what heavy overhaul is done here rather than at Neihu, and whether either depot does it at all rather than contracting it out.

Allocation

This page previously said Muzha was home to the VAL256 [/train/rolling-stock/val256/] fleet alone. The best available source says it stables **both** types, VAL256 and Innovia APM 256 ^[2], and the one-fleet-per-depot split that appeared here was never sourced at all. The claim now matches the source rather than the assumption.

Access

Not open to the public. *Any public viewing points or open-day arrangements to be added.*

Specifications

Site area	6.2 ha ^[1]
Stabling roads	12 ^[2]
Stabling capacity	84 pairs ^[2]
Heavy overhaul	TBC
Light maintenance	Yes ^[1]
Train wash	Yes ^[1]
Test track	Yes ^[2]
Operations control centre	Secondary since 2009 ^[3]

References

1 of 3 sources on this page is primary — published by the operator, the builder or government.

- 1 Wenshan—Neihu Line** [<https://www.dorts.gov.taipei/cp.aspx?n=DBAC040496EFAB94>]
文山內湖線

PRIMARY Taipei City Government, Department of Rapid Transit Systems (DORTS)
accessed 2026-08-06

The builder's own project record. Puts the depot near the zoo exit at about 6.2 ha, with functions 車輛儲存、維修、行控、清洗 — storage, maintenance, operations control and washing.

- 2 Muzha Depot** [<https://zh.wikipedia.org/zh-tw/木柵機廠>]
木柵機廠

SECONDARY 維基百科 (Chinese Wikipedia) accessed 2026-08-06

The only source found for the 12 stabling roads, the 84-pair capacity, the third-level grade, and for both fleets being stabled here. All four are one source deep.

- 3 Neihu Depot** [<https://zh.wikipedia.org/zh-tw/內湖機廠>]
內湖機廠

SECONDARY 維基百科 (Chinese Wikipedia) accessed 2026-08-06

Records that Neihu's control centre took over the primary function from Muzha in 2009.
