

Wenhu Line

Taipei's driverless brown line — no cab, a front window you can stand at, and a rubber-tyred guideway that climbs hills the rest of the network cannot.

THE LINE

ELEVATED

BR WENHU LINE 文湖線			
LINE CODE BR	OPERATOR Taipei Rapid Transit Corporation	TERMINI BR01 — BR24	STATIONS 24 ^[2]
ELEVATED 22 ^[2]	UNDERGROUND BR13, BR14 ^[4]	OPENED 28 March 1996 ^[2]	LAST EXTENSION 4 July 2009 ^[2]
END TO END 45 min ^[3]	GUIDEWAY Rubber-tyred, side-guided ^[8]	ELECTRIFICATION 750 V DC third rail ^[4]	SIGNALLING CITYFLO 650, Bombardier (now Alstom) ^[4]
AUTOMATION GoA4, driverless ^[4]	DEPOTS Muzha, Neihu		

PHOTOGRAPH WANTED

A train on the elevated guideway, shot from street level — the line is fully elevated here, so the structure and a passing train are both reachable without a permit.

The Wenhua Line guideway.

Stub page. This entry is an outline. Figures marked *TBC* still need to be checked against a primary source before publication.

There is no cab. Stand at the front of the leading car and the guideway comes straight at you — through the hills above Muzha, across the rooftops of eastern Taipei, over the Keelung River into Neihu. It is the best free view in the city, and it exists because nobody needs to sit where you are standing.

The Wenhua Line was **Taiwan's first metro line**^[9], and it remains the only line in the Taipei network running on rubber tyres rather than steel wheels. That choice is why it can climb what it climbs.

The specific gradient and curve-radius claims that used to sit here — that the gradients through Wenshan District are steeper than conventional heavy metro would manage, and that the elevated curves would be impossible on a steel-wheel alignment — have been removed. Both are probably true and neither was sourced, and "impossible" was doing a great deal of unattributed work. They need DORTS's design criteria.

History

The name is a contraction: **Wenshan** and **Neihu**, the districts at either end. The two halves opened thirteen years apart.

STAGE	SECTION	LENGTH	OPENED
Muzha Line	BR01 — BR12	10.9 km ^[2]	28 March 1996 ^[2]
Neihu extension	BR13 — BR24	14.8 km ^[2]	4 July 2009 ^[2]

When the extension opened, the two sections began operating as one through line and the combined route took its present name. The original VAL256 fleet was withdrawn the same day for conversion to the new signalling and did not carry passengers again until 26 December 2010^[5] — see VAL256 [/train/rolling-stock/val256/].

The construction programme, the Matra contract dispute and the 1996 opening-year disruptions are all still to be written up.

Route

Elevated for almost its entire length. From **BR01** the line climbs north through Wenshan District, crosses central Taipei on an east–west alignment, then turns north-east across the Keelung River into Neihu.

Two of the twenty-four stations are underground: **BR13** **Songshan Airport** and **BR14** **Dazhi**^[4]. Both are on the Neihu section, which DORTS records as carrying 3.9 km of underground running and two underground stations^[2] — so the primary record and the encyclopedia agree, from different directions. The platform depths are still not established here and are not asserted.

Every platform on the line has full-height platform screen doors: Faiveley equipment from **BR01** to **BR12**, ST Electronics from **BR13** to **BR24**^[7].

Operations

Trains run without on-board drivers under automatic train control, at GoA4 — unattended train operation, the highest grade^[4].

Weekday headways are about 2–4 minutes at peak, 4–10 off-peak, and about 12 minutes after 23:00; weekends and holidays run the off-peak pattern all day^[3]. **End to end takes about 45 minutes**, **BR01** to **BR24** or the reverse^[3]. zh.wikipedia adds that the headway can be compressed to 80 seconds^[4]; that is a signalling capability rather than a timetable, and no primary source for it was found.

How long the line is

Three figures circulate, and they are not in conflict — they measure three different things.

FIGURE	WHAT IT MEASURES	SOURCE
25.17 km	Revenue length, BR01 to BR24	TDX <code>CumulativeDistance</code> against the last station of route BR-1 ^[1]
25.7 km	The two construction projects added together	10.9 km + 14.8 km, both DORTS's own figures ^[2]
25.04 km	This site's own measurement along MOTC's surveyed geometry	the map below

The 25.7 km that appears as 路線長度 on zh.wikipedia^[4] had been unaccounted for on this page. It is the **sum of the two published section lengths**: DORTS records 木柵線 約10.9公里 and 內湖線 約14.8公里, and $10.9 + 14.8 = 25.7$ exactly^[2]. Those are project lengths — the extent of what was built, including non-revenue track at each end — which is why the total exceeds the 25.17 km of railway that carries passengers.

Rolling stock

Two fleets share the line, both four-car formations built as permanently coupled pairs:

- VAL256 [/train/rolling-stock/val256/] — 51 pairs, the original Muzha Line fleet^[5]
- Innovia APM 256 (C370) [/train/rolling-stock/innovia-apm-256-c370/] — 101 pairs, delivered for the Neihu extension^[6]

They are not the same vehicle and not the same design lineage; what they share is the guideway interface. TRTC has announced a programme to replace all 76 trains by 2041 — see the research notes, and treat the figures as provisional.

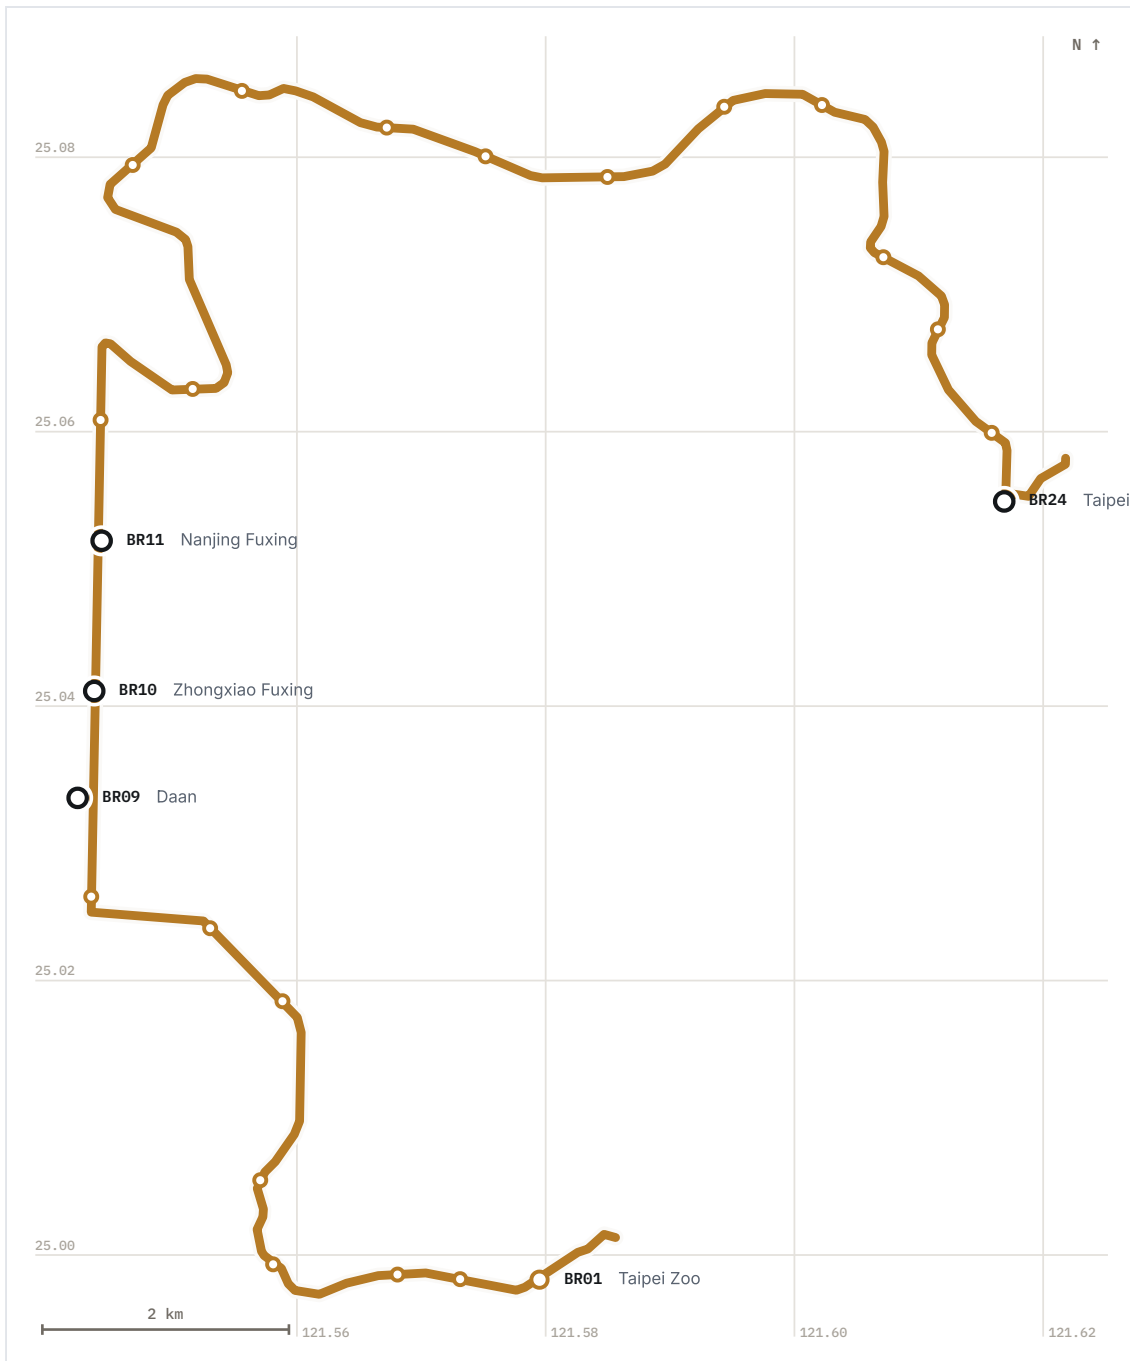

Depots

Muzha Depot [/train/depots/muzha-depot/] sits at the southern end beside BR01 and opened with the line in 1996^[2]. Neihu Depot [/train/depots/neihu-depot/] was built for the extension and came into use in 2009^[2]. Despite its name it is in Nangang District and joins the running line at BR24, not at BR19 as this page previously said.

Sources

Station names, codes, running order, coordinates and the end-to-end journey time come from **Taiwan MOTC's TDX platform**, operator TRTC — government open data, retrieved 5 August 2026. The strip map is generated from it directly. Everything else is cited inline and listed below.

TDX does not publish station structure, headways, or anything about rolling stock and depots; those come from TRTC's and DORTS's own publications where they exist, and are marked secondary where they do not.

The line as surveyed, from MOTC route geometry — 25.0 km measured along the alignment from the first station to the last. Termini and interchanges are labelled; every station has a name on hover.

Specifications

Route length, revenue	25.17 km ^[1]
Route length, published	25.7 km ^[2]
Stations	24 ^[2]
Elevated stations	22 ^[2]
Underground stations	2 ^[2]
Underground running	3.9 km ^[2]
Guideway spacing	1880 mm ^[4]
Electrification	750 V DC ^[4]
Automation grade	GoA4 ^[4]
Peak headway	2–4 min ^[3]
Off-peak headway	4–10 min ^[3]
Late-evening headway	12 min ^[3]
Design minimum headway	80 s ^[4]
Maximum operating speed	70 km/h ^[4]
Design speed	80 km/h ^[4]
End-to-end journey	45 min ^[3]

References

4 of 9 sources on this page are primary — published by the operator, the builder or government.

- Taiwan MOTC TDX — StationOfRoute, operator TRTC** [<https://tdx.transportdata.tw/>]
PRIMARY Ministry of Transportation and Communications, Taiwan accessed 2026-08-05
Government open data, committed to this repository at [data/tdx/](https://data.tdx.gov.tw/). The route's revenue length is the CumulativeDistance against the last station of route BR-1; the RouteLength field is zero for every metro route, which is what once led this page to say the figure was not published.
- Wenshan—Neihu Line** [<https://www.dorts.gov.taipei/cp.aspx?n=DBAC040496EFAB94>]
文山內湖線
PRIMARY Taipei City Government, Department of Rapid Transit Systems (DORTS)
accessed 2026-08-06
The builder's own project record for both halves: 木柵線 約10.9公里，設12座車站 and 內湖線 約14.8公里，設12座車站（地下段3.9公里，2座地下站）. Those two lengths are what add to the 25.7 km that circulates as this line's route length.
