
Train

Taipei Metro, Taoyuan Airport MRT, New Taipei Metro and regional rail — lines, the trains that run on them, and the depots that maintain them.

The network

All seven lines across three operators, with a geographic map drawn from official route geometry.

Lines

Route overviews, station lists, operating hours and service patterns.

Wenhu Line

Taipei's driverless brown line — no cab, a front window you can stand at, and a rubber-tired guideway that climbs hills the rest of the network cannot.

Rolling Stock

Train fleets — builders, technical specifications, formations and where each type runs.

VAL256

The French fleet that opened the network in 1996 — and spent eighteen months in a depot having its brain replaced while the line it built ran without it.

Innovia APM 256 (C370)

Not a VAL, and not descended from one — a Canadian people mover built to fit a French railway, because the alternative was two incompatible halves of one line.

Depots

Stabling and maintenance facilities — location, capacity, and the lines and fleets they serve.

Muzha Depot

Where the network started — the first depot Taipei ever built for a metro, and demoted in 2009 from the whole of the system's engineering capability to the junior of two.

Neihu Depot

The line's main workshop — named after a district it is not in, and joined to the running line at the opposite end from the station that shares its name.
