

Lines

Route overviews, station lists, operating hours and service patterns.

	Wenhu Line Taipei's driverless brown line — no cab, a front window you can stand at, and a rubber-tyred guideway that climbs hills the rest of the network cannot.	 文湖線
	Sanying Line New Taipei's newest railway — a driverless elevated line to Sanxia and Yingge, open six weeks and in a dated free trial, documented from the operator and government.	 三鶯線
	Tamsui–Xinyi Line The red line — the network's north–south spine, from the riverside at Tamsui through the core to Xiangshan, and the oldest right-of-way on the system.	 淡水信義線
	Songshan–Xindian Line The green line — three separate DORTS construction projects run as one, underground end to end, with the network's oddest branch climbing into the middle of a depot.	 松山新店線
	Zhonghe–Xinlu Line The orange line — a Y-shaped route built as three separate projects, whose two northern arms to Luzhou and Huilong share one southern trunk through Zhonghe.	 中和新蘆線
	Bannan Line The blue line — the east–west trunk through the main station, built in eight openings over sixteen years, and the one line whose ridership its own operator does not publish separately.	 板南線
	Circular Line New Taipei's orbital, and the line an earthquake took apart — eleven displaced girders, a 92 cm shove, eight months shut, and a Control Yuan report that traced it to a plate milled 36 mm too deep.	 環狀線
	Danhai LRT New Taipei's first light rail — street-running trams serving the Tamsui new town, built on Taiwan's own domestic light rail vehicle, with a second phase under construction.	 淡海輕軌
	Ankeng LRT The second New Taipei light rail line — a valley feeder into the Xindian corridor, with a button you have to press to get the doors to open.	 安坑輕軌
	Taoyuan Airport MRT The purple express-and-commuter line from Taipei Main Station to the airport and on into Taoyuan — a different operator, a different fare system, and the network's only express/local pattern.	 桃園機場捷運線
