

Network

The joint-operation system — one brand, one fare structure, many private companies — and the route numbering that encodes more than it appears to.

The page this folder exists for is an explainer, not a listing: how 聯營公車 works — who sets fares, who owns the buses, what the city controls and what the companies do — and how the route numbering system encodes direction suffixes, short-workings, branches, trunk routes and minibus services in ways no English source explains. **One of those pages is now written** — see the joint-operation network `[/bus/network/joint-operation/]`. Writing it cost this section most of what it thought it knew. Several claims that had been sitting in research notes did not survive their first check against the regulator: the numeric bands turned out to have a competing and better-sourced explanation, the feeder-colour table was missing a line, and the revenue-pooling model that was supposed to be the whole point of the page is not described by the office that runs the system. What is published is what survived those checks.

A second page covers the national programme reshaping what those buses run on: the 2030 electrification programme `[/bus/network/electric-bus-programme/]`, a NT\$64.3 billion plan^[1] the Legislative Yuan's own oversight documents record as running well behind its own interim targets^[1]. A third covers how the joint-operation committee decides who runs the routes it has just described: operator service ratings `[/bus/network/operator-ratings/]`, a twice-yearly graded evaluation running since 1992^[2] that ties directly into the route-points mechanism above^[2].

3 entries

The joint-operation network

Around 280 routes, fourteen private companies and one brand. Four city regulations set out how the money actually moves — and the central revenue pool everyone repeats is in none of them.

Operator service ratings

Twice a year since 1992, Taipei has graded its bus operators 優/甲/乙/丙/丁 on 26 indicators — and the grade can cost an operator its routes. It is a national requirement, not a Taipei quirk — New Taipei, Taoyuan, Taichung, Kaohsiung and Tainan each run their own separate scheme.

The 2030 electrification programme

A NT\$64.3 billion, seven-year national programme to convert Taiwan's bus fleet to electric — and the Legislative Yuan's own record of it running well behind target.

Side by side

	Operator service ratings	The 2030 electrification programme
Named indicators	TBC	—
Route-points earned per grade, current regulation	TBC	—
FY2024 (113年度) 公路局 budget	—	NT\$2.7802 billion
FY2025 (114年度) programme budget	—	NT\$6.8575 billion
FY2024 city bus target	—	TBC (3,300 in one LY document, 3,400 in another)
FY2025 city bus target	—	5,000 buses, 35% penetration
