Provenance

Which facts on this site are official records, which are our own research, and which are still open. A reference site that will not tell you this is asking you to take it on trust.

The source data is not current. We retrieved it on 2026-08-24, but the operators' own last-updated stamps run from **2016-11-23** to 2026-08-22. That is fine for a network which has not changed since — but a station opening after those dates will not appear here, and no amount of refetching changes that until the operator republishes.

Who publishes what

Taipei's network is run by three companies, and they do not publish identical datasets. If you are building on this data, this is the table you want before you start.

DATASET	KRTC	NTALRT	NTDLRT	NTMC	TMRT	TRTC	TYMC	WHAT IT GIVES US
first-last-timetable	304	—	—	26	34	243	160	first and last train per station and direction
line	2	1	1	1	1	5	1	line records, including the official LineColor
line-transfer	2	—	—	5	—	34	0	interchange pairs, better than inferring transfers from station names
route	4	4	4	2	2	22	5	route records, termini and end-to-end travel time
s2s-travel-time	4	—	—	1	2	11	2	run time and dwell between adjacent stations, in seconds
shape	2	1	1	1	1	5	1	route geometry as WKT — the surveyed alignment the maps are drawn from
station	39	9	14	14	18	121	22	station codes, Chinese/English/Japanese/Korean names, coordinates, address

DATASET	KRTC	NTALRT	NTDLRT	NTMC	TMRT	TRTC	TYMC	WHAT IT GIVES US
station-of-route	4	4	4	2	2	22	5	station sequence per route — what orders BR01 to BR24

Zero is not the same as absent. Taoyuan Metro publishes a transfer dataset and it is empty — the Airport MRT has no in-system interchanges to record. An em dash means the operator does not publish that dataset at all.

Ours — researched, not official

- **Elevated or underground.** TDX does not publish structure. Ours is compiled by hand and kept in a separate overlay file so refetching official data can never overwrite it — and so it is never mistaken for official data. Two Wenhui stations are marked *not established* rather than guessed.
- **Everything about rolling stock and depots.** Fleet sizes, car dimensions, capacities, depot areas and stabling capacity are not in any open dataset we have found. Anything marked TBC on those pages is genuinely unknown to us, not merely unfetched.
- **Measured route lengths.** Distances computed along the drawn geometry, between the first station and the last. These are ours, and they sit beside the operators' own figures on the network page [\[/rail/network/\]](/rail/network/) rather than replacing them — printing both is what makes the check visible.

Corrected

This site previously said TDX did not publish route length, because the RouteLength field on the route record is zero for every metro route. That was wrong, and the data was already in this repository: StationOfRoute carries a cumulative distance against every station, and the last one is the route's length. The Wenhui Line is 25.17 km, which settles a figure this site had been recording as unsourced. The lesson is the same one the line colours taught — check the whole record before concluding a source is silent.

Still open

- Which two Wenhui stations are underground.
- Where the 25.7 km Wenhui route length in circulation comes from. The official figure is 25.17 km and our own measurement agrees at 25.04 km; 25.7 is unaccounted for.
- Headways, track gauge and electrification.
- Station opening dates — not published in any dataset we fetch.
- Whether DORTS's published Pantone and CMYK signage values match the hex values on the colours page [\[/data/line-colours/\]](/data/line-colours/).

Licence and reuse

The underlying records are Taiwan government open data, published by MOTC through TDX under the Open Government Data Licence [<https://data.gov.tw/licenses>]. You may use, reproduce, distribute and adapt them, including commercially, provided you attribute the source.

Our derived work — the contrast-checked badge and accent colours, the chained geometry, the structure overlay — is offered on the same terms. Attribution to Taiwan Transit Guide is welcome but not required; attribution to MOTC is required by their licence, not ours.

198 TDX stations · 12 primary-sourced Sanying stations · 7 operators · retrieved 2026-08-24 · sources last updated 2016-11-23 to 2026-08-22

An independent, non-commercial reference site. Not affiliated with any transit operator or government body in Taiwan. Line colours are the official values published by each operator through Taiwan MOTC's open data platform. [About this site.](#)

Station names, codes and sequence from TDX Transport Data eXchange, Ministry of Transportation and Communications, operators TRTC, NTMC, TYMC, and TMRT. Government open data. Retrieved 2026-08-24; source last updated 2016-11-23. The 12 Sanying station records absent from TDX are sourced directly to New Taipei Metro and government publications on their pages. Provenance.
