
TOD and joint development

The station-area buildings, land rights, public returns and disputes that sit beside Taipei-region rail.

TOD AND JOINT DEVELOPMENT		
TAIPEI VALUE RULE Authority and landowners each receive half of qualifying incentive floor area, subject to the governing agreement and rules ^[1]	NEW TAIPEI CIRCULAR LINE PORTFOLIO 10 planned development sites; 4 had investors when the integrity-platform page was fetched ^[11]	NEW TAIPEI COMPLETED DEVELOPMENT RECORD 2 of 37 official development cases were complete in the current New Taipei account ^[10]

What TOD means here

The Taipei-region primary record uses land development and joint development as the operative terms, rather than treating every station-area building as a generic TOD project.^[1] The mechanism combines a station, entrances, depot or other rail facility with offices, shops, housing or public space, and the development record is therefore about land rights and interfaces as much as about architecture.^[1]^[9] The page uses TOD as a reader-facing label, but keeps the official categories and site names in the tables below.^[1]

How value and risk are allocated

Taipei `[/rail/thsr/stations/taipei/]`'s FAQ says the authority and landowners each receive half of the actual design incentive floor area created under the applicable MRT and planning rules, unless a different agreement or law applies.^[1] Its separate value-conversion explanation subtracts the authority's incentive-volume value from the building's total value and treats the investor's assessed construction, tax and expected-profit contribution as a conversion value, rather than publishing a single investor revenue percentage.^[1] Taipei also states that rent, sale and operating income from returned property can support MRT construction finance.^[1]

New Taipei publishes a different sequence: after planning designation and negotiated acquisition, the authority selects an investor, then proceeds through design, permits, construction and rights allocation before transferring property according to the agreed allocation.^[9] Its value rule starts with the completed building's total value, subtracts the

authority's allocated value, and uses the balance to calculate landowner and investor values.^[9] The public record therefore supports a process comparison, not a single Taipei-wide revenue-share ratio.^[1] ^[9]

Completed and operating cases

The DORTS technical journal records Daan Forest Park J2 as a 2,994 m² private site with 34,644.77 m² of non-MRT floor area, 62 homes, and an occupancy permit in ROC 99; its station entrance is integrated into the building.^[3] The same case records an estimated NT\$56.77 million saving in land-acquisition cost at the stated valuation basis, which is a case-specific estimate rather than a general return.^[3] The adjacent Daan J3 case has an 890 m² site, 12,650.72 m² of non-MRT floor area, 31 commercial units and an occupancy permit in ROC 101; its station entrance is also built into the development.^[3] These cases link to Daan Park (**R06**) [/rail/metro/stations/r06/] and Daan (**R05**) [/rail/metro/stations/r05/], while the source-era labels J2 and J3 remain the development identifiers.^[3]

The Daan Forest Park design book shows why completion cannot be inferred from a drawn station plan: its basic design proposed 23,499.96 m², while the investor's building-permit design showed 34,644.77 m² and a different building height and use mix.^[4] The source also makes the station entrance a programme constraint, with completion targeted before the Xinyi Line opening so that passenger access and evacuation would not be delayed.^[4]

Zhongshan has at least two separately numbered development cases. The J1 record gives a 1,468.58 m² site, 18,228.12 m² of planned non-MRT floor area, a retail, office and residential mix, and 95.40% construction progress at the end of July 2017; it does not settle a final completion date in that page.^[5] The J2 design record instead gives a 1,681 m² site and 24,070.77 m² total floor area, including 1,164.14 m² of MRT facilities, with exit 6 integrated into the building.^[6] The current registry links the station to Zhongshan (**R11**) [/rail/metro/stations/r11/] and Zhongshan (**G14**) [/rail/metro/stations/g14/]; the source's **G16** label is an engineering-era label, not a current station code.^[6]

The current DORTS rental table shows the returned-property side of this system, not just the construction side. It lists, for example, one **BR4** Zhongxiao Fuxing shopping-mall property at 2,036.38 ping and NT\$3,869 per ping per month, and a **G02** Xindian District Office development with 25 office units listed and 25 leased.^[7] The table also records a range of areas and rents for Daan, Daan Park, Xinpu, Guting and other sites, but it is not a complete construction history or a developer register.^[7]

Current and advancing portfolio

Taipei's public-land register supplies contract dates and named private investors for newer cases while leaving many area, completion and revenue fields to their individual project records.^[8] Its current list includes the Xinpu adjacent site (**BL08**) [/rail/metro/stations/bl08/] signed with 旺泰建設 and 忠泰長虹建設 on ROC 110-07-05, the Chiang Kai-Shek Memorial Hall site (**R08**) [/rail/metro/stations/r08/] and **G10** [/rail/metro/stations/g10/] signed with 愛山林建設 and 宏匯

on ROC 114-05-22, and future-labelled [Y26](#) and [Y21](#) Circular Line [\[/rail/metro/lines/circular-1ine/\]](#) development cases with named investors.^[8] The contract list is evidence of an investor agreement, not evidence that construction or occupancy has finished.^[8]

DORTS's current land-development office page shows that its work now spans investor selection, design review, contract management, construction-cost assessment, rights allocation and post-handover defects; it names current work at [Y26B](#), [Y37](#), [Y21B](#), [Y20B](#), [Y23B](#), CKS Memorial Hall, Xinpu and Xindian [\[/rail/metro/stations/g01/\]](#) District Office sites.^[2] Those future Circular labels cannot be silently converted into current station pages because the committed station registry does not yet contain every planned code.^[16]

New Taipei scale and public return

New Taipei's Circular Line integrity platform identifies ten planned land- development stations and says four—Xiulang Bridge [\[/rail/metro/stations/y09/\]](#), Jingping [\[/rail/metro/stations/y10/\]](#), Zhonghe [\[/rail/metro/stations/y12/\]](#) and Zhongyuan [\[/rail/metro/stations/y14/\]](#)—had investors performing contracts when the page was fetched.^[11] For the six sites placed on the integrity platform, the same official page publishes an estimated NT\$7.287 billion contribution to self-financing funds, NT\$176.072 billion in total building value, NT\$60.883 billion in investment and NT\$67.937 billion in public benefit including public landowners.^[11] These are the authority's estimates for that portfolio, not realized revenue. The source also says the Circular Line itself completed and entered service on 31 January 2020, while the ten development sites remained a separate land- development programme.^[11]

New Taipei's current financial account says its authority had 37 development cases, had selected investors for 13, and had completed two when the article was updated; it describes returned-property rents and sales as a principal source for repaying self-financing debt.^[10] A separate Sanying [\[/rail/metro/lines/sanying-line/\]](#) depot news record gives a 14.1-hectare depot-and-[LB05](#) site, says about 80% of agreeing landowners had chosen participation or retained development rights, and leaves the investor-selection stage ahead.^[12] It is therefore an advancing land-rights case, not a completed building.^[12]

Meihe City and the legal dispute

Meihe City is the region's essential caution against treating joint development as an uncomplicated financing success. New Taipei's official 2014 account says the review lasted more than 15 years, reduced an original 26-building design to 13 buildings, and required greater setbacks and public space after urban-design and environmental review.^[13] A later New Taipei government research report instead describes 16 towers, 2,220 units, about 400,600 m² of floor area, and Rich Development as the selected private developer.^[14] Those are conflicting project descriptions from different official records; the site publishes both rather than choosing one.^[13]
^[14]

The legal issue is not just a design disagreement. Judicial Interpretation No. 743 states that land expropriated under MRT Law Article 6 cannot be used in the same plan for Article 7 joint development, and that transfer to a third party requires clear legal authority.^[15] The interpretation records the underlying Xindian depot case, the different statutory purposes of expropriation and joint development, and the disagreement among the Control Yuan, executive agencies and courts before the interpretation.^[15] Meihe City is therefore published here as a legal and governance conflict as well as a large-scale station-area project.^[15]

What the inventory still cannot say

The fetched primary material does not provide one reconciled table containing every site's developer, site area, total floor area, completion date, realized revenue share and dispute history.^[16] It provides detailed case records, current rental inventory, contract lists, portfolio estimates and legal records in separate families.^{[3] [7] [8] [11]} The missing values stay TBC until the project contract, occupancy record, rights-allocation decision or audited revenue statement is fetched for that specific site.^[16]
