Statistics

National transport data from MOTC's own surveys — modal share, vehicle ownership, and a live three-way disagreement over how many people die in traffic each year.

National

Modal share, vehicle ownership and the traffic-death reconciliation, all from MOTC's own published series.

National modal share

MOTC's 2024 National Travel Survey — the year rail's mode share passed bus for the first time, public transit still below its 2020 pre-pandemic peak, and a public-transit share that ranges from 38.3% in Taipei City to 3.3% in Nantou.

Traffic-death statistics — a three-way disagreement

MOTC's 30-day count, the police A1 24-hour count, and the health ministry's cause-of-death registry each publish a different annual traffic-death total for the same year, and MOTC has had to publicly state it is not manipulating the numbers.

Vehicle registration, 1988-2025

A near-40-year MOTC series tracking Taiwan's motor-vehicle fleet from 8.4 million to 23.3 million registered vehicles, with scooters still outnumbering cars by nearly two to one.

Every mode this site covers eventually shows up in one of MOTC's national statistical series, and those series are worth a section of their own because they carry context none of the mode-by-mode pages can: how travel choices are actually shifting in aggregate, how many vehicles are actually on the road, and — a genuinely live methodological dispute — how many people actually die in road traffic each year, which the transport ministry, the police accident-report system and the health ministry's death registry do not agree on and MOTC itself has had to publicly explain.

Start with National [\[/statistics/national/\]](#) for modal share, vehicle registration and the traffic-death reconciliation, each dated to its retrieval and its survey period rather than presented as a permanent figure.

An independent, non-commercial reference site. Not affiliated with any transit operator or government body in Taiwan. Line colours are the official values published by each operator through Taiwan MOTC's open data platform. [About this site.](#)

Station names, codes and sequence from TDX Transport Data eXchange, Ministry of Transportation and Communications, operators TRTC, NTMC, TYMC, and TMRT. Government open data. Retrieved 2026-08-24; source last updated 2016-11-23. The 12 Sanying station records absent from TDX are sourced directly to New Taipei Metro and government publications on their pages. Provenance.
