

[← Back to Lines](#)

Green Line

Taichung's 18-station driverless railway from Beitun Main Station to HSR Taichung Station.

THE LINE

NOT ESTABLISHED

16.71^[3] km

OPERATOR-PUBLISHED ROUTE LENGTH

TDX publishes RouteLength 16.70 km, plus 16.93 km in direction 0 and 16.97 km in direction 1 as cumulative station chainage; these values are retained as a conflict rather than silently substituted for the operator's 16.71 km figure.

G WURIWENXIN BEITUN LINE 烏日文心北屯線

OPERATOR Taichung Metro Corporation [/rail/operators/tmrt/] [10]	STATIONS 18 [3]	TERMINI G0 Beitun Main Station [/rail/tmrt/stations/g0/] — G17 HSR Taichung Station [/rail/tmrt/stations/g17/] [2]	PUBLIC OPENING 25 April 2021 [12]
GUIDEWAY 16 elevated stations; G0 and G17 at ground level [4]	AUTOMATION Fully driverless [4]		

The Green Line is a single line, but it is not a single measurement. The operator's 2021 route report gives **16.71 km** and 18 stations. [3] The committed TDX route record gives **16.70 km** in its `RouteLength` field, while its station chainages reach **16.93 km** in direction 0 and **16.97 km** in direction 1. [1] Those four figures are published together here because the sources do not state that they measure exactly the same object; the page does not average them.

G0 Beitun Main Station [/rail/tmrt/stations/g0/] and **G17** HSR Taichung Station [/rail/tmrt/stations/g17/] are the line's two ground-level stations; the other 16 are elevated. [4] The operator describes the railway as steel-wheel and medium-capacity, with two-car, fully driverless trains and a maximum operating speed of 75 km/h. [4] The TDX sequence runs through Beitun, North District, Xitun, Nantun [/rail/tmrt/stations/g11/], South District and Wuri [/rail/tmrt/stations/g16/], ending beside the HSR and TRA interchange at **G17**. [1] [2]

The civil work is readable as three geographic packages: CJ910 at **G0** and the Beitun depot, CJ920 across **G3** – **G9**, and CJ930 from **G10** through **G17**. [5] [6] [7] CJ900/CJ907 is the system-equipment package, covering power, communications, automatic fare collection, depot equipment, trains and related systems rather than a further passenger-facing segment. [8]

The line's opening history contains a material safety event. A joint shaft fractured during test operation on 21 November 2020; the Control Yuan records failures to verify design parameters and deficiencies in quality supervision. [10] [11] Taichung [/rail/thsr/stations/taichung/] restarted test operation on 25 March 2021 and began formal service on 25 April 2021 after the remedial programme. [12] The sources read for this page do not support the often-repeated "2022 reopening" date, so it is recorded as a checked conflict rather than repeated as fact.

Public art is not treated as a colour swatch for the line. The operator's current roster names works at **G0**, **G3**, **G7**, **G9**, **G10a**, **G13**, **G16** and **G17**, with the station-specific pages below preserving those names and artists. [9]

Who actually built it

Taichung had no metro-engineering agency of its own when the Green Line was designed and built. DORTS — Taipei [\[/rail/thsr/stations/taipei/\]](/rail/thsr/stations/taipei/) City Government's own Department of Rapid Transit Systems — states directly that MOTC commissioned Taipei City Government to handle the line's subsequent design and construction, formalised in a three-party agreement MOTC, Taipei City Government and Taichung City Government signed on 15 November 2008.

^[14] A 2017 news report corroborates DORTS actually doing the work: 「負責代為工程施作的北市捷運局表示，台中捷運綠線目前工程進度近7成」 (the Taipei DORTS office, executing the work on Taichung's behalf, states progress is nearly 70%), and describes a DORTS deputy director personally leading a January 2017 factory inspection of the prototype train at Kawasaki Heavy Industries in Japan. ^[15] Taichung's mayor confirmed the same arrangement in 2025, framing it as a temporary necessity now ending: 「台中只有一條捷運綠線，委託最有經驗的台北市政府施作」 (with only the one line, Taichung commissioned the most experienced body available) — announced alongside Taichung establishing its own independent metro-engineering bureau for future lines. ^[16] The line's own current civil-package records (CJ910/CJ920/CJ930/CJ900) are attributed to Taichung's own bureau, which reflects that bureau's current role hosting the records rather than a contradiction of DORTS's construction history. ^{[5] [6] [7] [8] [14]}

Extensions

Two extensions have Executive Yuan approval, both from a Taichung City Government announcement fetched in full: a 2.49 km, 2-station northern extension from Jueshe Station toward the Dakeng area along Songzhu [\[/rail/tmrt/stations/g4/\]](/rail/tmrt/stations/g4/) Road, and a 6.59 km, 5-station southern extension from HSR Taichung Station across the Wu River into Changhua [\[/rail/thsr/stations/changhua/\]](/rail/thsr/stations/changhua/) County, co-located with the elevated Changhua Railway's Jinma Station. ^[13] The Executive Yuan approved both on 31 January 2024, with combined funding of NT\$35.591 billion split between Taichung City (NT\$10.598bn), Changhua County (NT\$6.715bn) and the central government (NT\$18.278bn). ^[13] Those two segments sum to 9.08 km of new route; separate secondary reporting instead describes a "10.041 km, 8-station" comprehensive plan submitted for central-government review in February 2026, a figure that does not arithmetically match the two named segments and may be measuring a different scope. Both figures are published rather than reconciled, since no source states what the difference covers.

Ridership milestones

TMRT [\[/rail/operators/tmrt/\]](/rail/operators/tmrt/)'s own figures, reported by 聯合報 and attributed directly to the company, give 2025 annual ridership at 17.22 million, up 9% from 15.80 million in 2024. ^[17] Cumulative ridership passed 50 million on 9 June 2025 and 60 million in early January 2026, with December 2025 reported to have set new records for monthly and daily ridership, though the article does not give the record figures themselves. ^[17] TMRT's own press-release listings, checked directly, do not currently carry a release stating these milestones in the operator's own words; the figures rest on this news report's attribution to the company, not on a primary release read directly. ^[17]

Ridership

TBC. No ridership series has been imported for this operator. The page keeps the figure TBC rather than borrowing another operator's data.

The line as surveyed, from MOTC route geometry — 16.9 km measured along the alignment from the first station to the last. Termini and interchanges are labelled; every station has a name on hover.

Specifications

Operator route length	16.71 km ^[3]
TDX direction 0 chainage	16.93 km ^[1]
TDX route length field	16.70 km ^[1]
TDX direction 1 chainage	16.97 km ^[1]
Stations	18 ^[3]
Train formation	2 cars ^[4]
