Model T electric bus

Foxtron's Model T, recorded by New Taipei for San Chung Bus route 857.

MODEL T ELECTRIC BUS			
MANUFACTURER 鴻華先進科技股份有限公司 (Foxtron) ^[1]	PROPULSION Battery electric ^[2]	OPERATOR IN THE FETCHED RECORD San Chung Bus ^[2]	ROUTE IN THE FETCHED RECORD 857 ^[2]
QUANTITY 13 buses ^[2]	ENTRY INTO SERVICE 19 September 2023 ^[2]		

Manufacturer

Model T was developed by 鴻華先進科技股份有限公司 (Foxtron, the Hon Hai/Yulon electric-vehicle joint venture), which Hon Hai's own group press release names as delivering an initial batch of 30 Model T buses to 高雄客運 (Kaohsiung Bus, a Sandie Group subsidiary) on 3 March 2022^[1]. That Kaohsiung delivery is a separate, earlier deployment from the San Chung Bus route 857 record below; the two share a manufacturer and a model name, not a fleet^[1]^[2].

Model T is not made by RAC Electric Vehicles Inc. (華德動能科技, sometimes called "Tron Energy" in English), an unrelated manufacturer whose own current electric bus is the RAC-700^[/bus/model/rac-700/] — a naming collision worth stating plainly, since neither company's own material warns a reader away from confusing the two^[1].

Overview and deployment

New Taipei^[/rail/thsr/stations/taipei/]'s Transport Department records 13 Model T electric buses entering service on San Chung Bus route 857 on 19 September 2023^[2]. The source describes the vehicle as electric and places it on a named route with a named operator; it does not present this as a complete San Chung fleet register^[2].

The same release describes surround-view cameras, warnings for inner-wheel differences, electronic mirrors and passenger-facing route-request and stop-display equipment^[2]. It also records a municipal subsidy of NT\$1.5 million for each bus^[2]. That is procurement/subsidy evidence for this deployment, not a claim that the same amount applies to every electric bus in Taiwan^[2].

Thirteen buses at NT\$1.5 million each represent a published subsidy exposure of NT\$19.5 million for this deployment, calculated from the release's per-bus figure; the source does not say whether the operator paid an equal purchase price or whether the subsidy was disbursed in one instalment ^[2]. The date is an entry-into-service date for route 857, not a manufacture date, delivery date or fleet-wide conversion date ^[2].

Equipment named by the release

The assistance systems are part of the public announcement's description of these 13 vehicles: surround-view cameras, an inner-wheel-difference warning, electronic mirrors, a passenger stop-request interface and an onboard display for route and stop information ^[2]. The wording establishes the equipment that New Taipei chose to highlight; it does not provide a wiring diagram, software version, camera supplier or charging specification ^[2].

Technical gaps

The fetched New Taipei release does not itself identify a manufacturer; that comes from the separate Foxconn group press release above ^[1]. Neither source gives a chassis, body builder, battery capacity, seating/standing capacity or charging standard for the vehicle, so those fields remain TBC. A vehicle approval sheet, tender specification or manufacturer technical data sheet naming this exact Model T deployment would settle them ^[2] ^[1].

The page therefore records propulsion, operator, route, quantity, date and subsidy without converting the marketing name "Model T" into an unsupported technical model number ^[2].

Specifications

Chassis and body	TBC
Passenger capacity	TBC
Per-bus subsidy	NT\$1.5 million ^[2]
