

Hsinchu regional buses

The Hsinchu iBus portal's city, county express, Zhubei, tourist and medical-bus categories, preserved as a dated route and stop data layer.

HSINCHU REGIONAL BUSES			
ROUTE ENTRIES 68 ^[1]	OPERATOR LABELS 7 ^[2]	DIRECTION RUNS 96 ^[2]	PUBLISHED DEPARTURE VALUES 970 ^[2]
FARE VALUES TBC	RIDERSHIP TBC		

Hsinchu `[/rail/thsr/stations/hsinchu/]`'s public bus information is split across city and county responsibilities, but the city government's iBus portal presents the regional catalogue in one route selector.^[1] The committed snapshot covers five categories shown by that selector: 新竹市市區公車 (Hsinchu City buses), 新竹縣快捷巴士 (Hsinchu County express buses), 竹北市民公車 (Zhubei citizen buses), 新竹縣觀光巴士 (Hsinchu County tourist buses), and 新竹縣醫療專車 (Hsinchu County medical shuttles).^[1] The same portal also exposes national and regional highway-bus queries, but those are a different publication layer from the city-and-county route records below.^[1] ^[5]

The current route catalogue

The 25 August 2026 fetch found 36 city-bus entries, 10 county express entries, 14 Zhubei citizen-bus entries, five tourist-bus entries and three medical-shuttle entries.^[1] The route values preserve branch distinctions such as 20支A, 23支A, 快捷5號A, 61支線A and 68路B; these are not collapsed into their unsuffixed numbers because the portal gives each a separate selector value and detail response.^[1] ^[2] The data layer is available as the committed Hsinchu route JSON `[/data/hsinchu-bus-routes.json]`, with the same public copy under `/public/data/` for the static export.^[2] ^[3]

The portal's detail response names the operating company for a selected route. The snapshot contains seven operator labels, including 新竹客運, 科技之星交通, 金牌客運, 國光客運, 苗栗客運, 捷乘客運 and 尖石鄉公所.^[2] This is an operator-label count in this portal snapshot, not a claim about the legal number of bus companies in Hsinchu or the number of companies registered by the Highway Bureau.^[2] ^[5]

PORTAL CATEGORY

ROUTE ENTRIES

新竹市市區公車

36^[1]

新竹縣快捷巴士	10 ^[1]
竹北市民公車	14 ^[1]
新竹縣觀光巴士	5
新竹縣醫療專車	3

The table is a count of selector entries retrieved on the date above; a later portal revision may add, remove or rename an entry. ^[1]

Terminals and stop sequences

The route-detail response supplies a direction label, a run identifier and the published departure string. The separate `GetRoadLine` response returns an ordered list whose records include a stop name, stop identifier and latitude/longitude. ^[2] ^[3] The data layer therefore records the first and last stop in that ordered response as the direction's terminal summary, while retaining the whole stop sequence for checking. "Terminal" here means the boundary of the portal's ordered run data; it does not imply that the city has designated every boundary as a bus terminal facility. ^[3]

That distinction matters on circular and short-working services. For example, the portal's route 10 detail labels the outward direction 總站→成德高中, while its return stop sequence ends at 火車站 in the retrieved run data. ^[2] ^[3] The data layer preserves both the published direction label and the returned stop boundary instead of forcing them into one English terminal pair. ^[2] ^[3] Route 2 similarly exposes 火車站→陽明交大 in the detail response; its direction lists seven outward departures and six return departures in the snapshot. ^[2]

Published departures and fares

The portal publishes departure strings such as 0805,0845,1225,1310,1425,1640,1805 for route 2's outward run, and it exposes separate return runs where they exist. ^[2] Across the retrieved direction records, the committed layer preserves 970 departure values. That is a count of published timetable values, not a headway calculation and not a promise that every trip operates on every day. ^[2] The portal's current-notice stream shows why the retrieval date belongs beside the data: it carried a dated Green Line summer-timetable notice and temporary stop-adjustment notices during the same period. ^[4]

The detail response provides a linked 票價 page for routes, but it does not include a fare amount in the response used here. ^[2] Fare values therefore remain TBC. A later fare layer needs to fetch the linked route-level fare records, identify the effective date and concession rules, and preserve any conflict with a city or operator notice; the presence of a link is not evidence of a current numeric fare. ^[2]

Boundary, history and gaps

The national Highway Bureau timetable is kept separate because its catalogue describes a static nationwide export with its own operator, route, stop, date and departure fields.^[5] A Hsinchu route appearing in both systems would be a cross-layer relationship to verify, not a reason to merge the two route identities. This page does not use the Highway Bureau's national route count or monthly aggregate statistics as Hsinchu figures.^[5] ^[6]

No ridership series, vehicle roster, depot allocation, contract history, accessibility inventory or stable historical route-change series is asserted here. Those fields need primary records from Hsinchu City, Hsinchu County, operators or the Highway Bureau, fetched at full length. A 2024 Hsinchu transport-department PDF route-summary lead was checked on 25 August 2026 but returned HTTP 403, so it is recorded as a failed lead in the research file and is not used to fill the current snapshot.^[1]

Operators, and one unsettled question about scope

新竹客運 (Hsinchu Bus), the region's oldest operator, traces to 台灣軌道 株式會社, founded 29 September 1919^[7]. **Whether it still runs Hsinchu city buses is not settled.** zh.wikipedia's own article states the company currently operates only Hsinchu city buses and two intercity routes^[7]. A separately fetched news account reports that 新竹客運 exited **regional highway-bus routes** across Hsinchu-Miaoli (竹竹苗) entirely on 1 November 2024, citing falling ridership from demographic decline, pandemic effects and rising private-vehicle ownership^[8] — but that article's own framing is about intercity/highway routes, not explicitly about the city network the route catalogue above draws from, which still lists 新竹客運 as an operator label. This site does not resolve the two readings against each other; the catalogue above, dated 25 August 2026, is the more recent primary evidence and leans toward "still operating city routes."

The city's own two trunk lines have different operators: the **Blue Line** (formed 25 December 2015 from former routes 1 and 15) is run by 新竹客運, while the separately-formed **Green Line**, from the same date, is run by 苗栗客運 (Miaoli [\[/rail/thsr/stations/miaoli/\]](/rail/thsr/stations/miaoli/) Bus) — originally a highway route, 5809^[9]. A newer, fully electric 先導公車 (pilot bus) route is run by 國光客運: ten electric buses, funded by a NT\$52 million Highway Bureau subsidy, merging the former 紅線/橘線 circular shuttles and linking the railway station, two universities, the Science Park and HSR Hsinchu Station^[10]. Hsinchu's route catalogue is therefore run by at least four distinct companies across its different lines, not one dominant city operator.

Specifications
