Kaohsiung regional buses

Kaohsiung's TDX snapshot exposes 316 route records, 617 direction runs, 19,191 ordered stops and 30 operator records; the municipal route index separately reports 197 routes.

KAOHSIUNG REGIONAL BUSES			
TDX ROUTE ENTRIES 316 ^[4]	UNIQUE TDX ROUTE NAMES 316 ^[4]	ORDERED DIRECTION RECORDS 617 ^[6]	ORDERED STOP RECORDS 19,191 ^[6]
TDX OPERATOR RECORDS 30 ^[7]	MUNICIPAL ROUTE-INDEX COUNT 197 ^[2]	ROUTE-LEVEL RIDERSHIP SNAPSHOT TBC	HISTORICAL ROUTE-CHANGE SERIES TBC
ROUTE-LEVEL TIMETABLE HISTORY TBC			

Kaohsiung's regional bus layer is a dated structural snapshot, not a live departure board. The official municipal route index is the first boundary: its full route list displayed 197 routes when fetched on 25 August 2026.^[2] The separate operator index displayed the same total while grouping route labels under operators, including taxi-fleet entries and labels marked for reservation service.^[3] Those pages are useful for the city's public-facing route taxonomy, but they do not expose the same record schema as TDX.^[2] ^[3]

Current structured coverage

The live TDX Route response contained 316 route records, each with a route UID and ID, a Traditional Chinese and English name, terminal labels, operator objects, sub-route records, map URL where supplied, version ID and source update time.^[4] The response had 316 distinct route-name values in this retrieval, so the page does not silently deduplicate branches or labels that TDX publishes as separate route records.^[4] Its route data is joined to the full StopOfRoute response by the exact route UID.^[4] ^[6]

The StopOfRoute response supplied 617 direction-level records and 19,191 ordered stop objects.^[6] Each retained stop has the source stop UID and ID, name, sequence, boarding flag where present, and latitude/longitude values from the TDX object.^[6] This makes the committed JSON useful for stop-level joins and static route inspection, while the source `UpdateTime` remains the date of the underlying record rather than a promise about the next vehicle.^[6]

The operator response supplied 30 operator records with names, phone numbers, URLs, provider IDs, operator numbers and update times.^[7] That is a count of TDX operator records, not a count of companies currently running a passenger route: the route response attaches operators to its own route records, and the municipal index uses a different grouping and publication scope.^[7]^[3] The official catalogue also describes route-stop data with route IDs, stop IDs, coordinates, direction and order fields, and identifies the municipal static-data service as its source boundary.^[1]

Fares and service categories

The current official fare PDF states that the section-fare schedule applies from 1 July 2026 to section-priced city buses, including medical buses, 公車式小黃 and 幸福巴士.^[9] Its basic table gives NT\$15 cash or electronic full fare, NT\$10 for the specified student-card electronic fare, and NT\$8 half fare; cash payment is exact change.^[9] The same document requires electronic passengers to tap or scan on and off, and states that an incomplete transaction locks the electronic ticket until a later NT\$15 unlock charge is paid.^[9]

The bureau's full Q&A describes a one-section fare through 8 kilometres and a two-section fare above 8 kilometres, with the fare depending on passenger category.^[10] It also documents a 60-dollar maximum self-pay rule for mileage-priced highway and JOY routes, separate social-card point rules, MenGo products and the 399/999 commuter products.^[10] The fare page's title says "from 1 July 2026", while an internal heading on the same fetched page says "from 1 March 2026"; both are retained as a page-level date conflict rather than silently corrected.^[8]^[9]

Kaohsiung's 公車式小黃 plan explains that taxi vehicles substitute for bus service where low demand or geography makes a conventional route inefficient.^[11] The full plan records a 2014 trial, expansion from 2015, night service from 2017, wider rural deployment from 2019 and further route additions in 2021.^[11] It lists fixed routes operated by 中華大車隊 and 福倫車隊, while the municipal operator index also includes reservation-labelled entries; those labels should not be interpreted as ordinary fixed-timetable stops without reading the linked operator schedule.^[11]
^[3]

Accessibility and ridership boundary

The Transportation Bureau maintains a separate accessibility index listing a dated low-floor-bus route and reservation-information file, a rehabilitation-bus service and facility information.^[12] The linked low-floor-bus PDF did not return successfully in the full fetch, so this regional page does not invent a route-level accessible-bus list or claim that every TDX route is step-free.^[12]

The official open-data catalogue for Kaohsiung MRT feeder-bus operations lists annual route mileage, vehicles, trips, operated kilometres, passenger count, passenger-kilometres and revenue fields.^[13] Its linked JSON and CSV resources both failed direct fetch in this environment, so current passenger totals and a historical ridership series remain TBC.^[13] The bureau's statistical-publications index confirms that transportation reports exist for Minguo 104 through 113, but the 113 report link returned 404 in the full fetch; no table value is substituted from a search result.^[21]

Operators and ownership

Two operators dominate the network by history rather than by TDX record count. 高雄客運 (Kaohsiung Bus) traces to a Japanese-era predecessor, 高旗自動車株式會社^[14] — a date this site could not independently confirm on the operator's own history page, which states eleven named business stations (including one at 岡山, Gangshan) and 63 maintenance staff without giving an explicit founding year in the text fetched^[15]. It has been owned by 三地集團 (Santi Group) since roughly 2016 (an approximate date — the source gives only "five years before" a 2021 article), whose other holdings include 府城客運 (Tainan [\[/rail/thsr/stations/tainan/\]](/rail/thsr/stations/tainan/)), 普悠瑪客運 (Taitung), and, more recently, 嘉義客運 (2019) and 苗栗客運 (2024)^[14] ^[16]. 港都客運 (Gangdu Bus) is a different company: formed 1 January 2014 by privatising the former municipal operator, 高雄市公共汽車管理處, which itself traces to a business operating from 1937 under Japanese rule^[17]. Ownership splits roughly 42% Kaohsiung City Government and 58% former public-bus-office employees^[17] — the same city-minority/employee-majority shape as Taipei [\[/rail/thsr/stations/taipei/\]](/rail/thsr/stations/taipei/)'s 大都會客運, formed the same way a decade later.

A name-collision check, run directly against this evidence: no operator called 大都會客運 or 岡山客運 exists in Kaohsiung. 高雄客運's own page names a Gangshan (岡山) service **station**, not a separate company^[15], and the only 大都會客運 this site has found anywhere is Taipei's [\[/bus/operators/metropolitanbus-h3iwov/\]](/bus/operators/metropolitanbus-h3iwov/) — see the operator ratings page [\[/bus/network/operator-ratings/\]](/bus/network/operator-ratings/) for the fuller account. 屏東客運 (Pingtung Bus), founded 1931, also serves Kaohsiung: routes 9117, 9127, 9188 and 9189 run jointly with 高雄客運, with a dedicated Kaohsiung station since 2001^[20].

Electric buses — three citywide counts, three different dates

No single reconciled figure exists; this site publishes all three rather than picking one. **10 April 2018:** 77 electric buses across seven private operators — 港都客運 50, 南台灣客運 14, 高雄客運 11, 漢程客運 2^[19]. **6 May 2022:** a city government publication states 195 electric low-floor buses out of roughly 1,000+ total city buses, 19% — described as the first among Taiwan's major cities^[18]. **A higher, unverified figure:** search results describe up to 130 electric buses at 港都客運 alone, called "全國第一" (first nationally) by a business magazine — this site could not fetch that article (HTTP 403 on every attempt, including an AMP variant) and does not publish the figure as fact. The same 2022 publication profiles a Foxtron Model T [\[/bus/models/model-t-electric/\]](/bus/models/model-t-electric/) bus in service on Route 24, with a stated 80%-charge time of two hours, though it does not name which operator runs that route^[18].

Conflicts and gaps

The 197-route municipal index and the 316-record TDX snapshot are both published values, but the fetched sources do not define a common counting unit: the index is a public route list while TDX includes separately identified route records and branch/service variants.^[2] ^[4] The page therefore publishes both and leaves the reconciliation TBC. A historical route-change series,

current route-level timetable history, fleet allocation, depot assignment, reliability, route-level ridership and a complete accessibility inventory also remain TBC because the fetched primary pages and structured responses do not supply those fields.^{[4] [6] [12] [13]}

Specifications

Snapshot retrieved	2026-08-25	[4]
TDX response update time	2026-08-25	[4]
Route data format	TDX JSON with route and sub-route records	[1]
Stop data format	TDX JSON with ordered stops and coordinates	[5]
Basic section fare	NT\$15 full / NT\$10 student card / NT\$8 half	[9]
