Muzha Depot

The original 6.2-hectare Wenhua facility — now the line's secondary depot, with 12 stabling roads, capacity for 84 married pairs and heavy-maintenance equipment for the 102-car Matra fleet.

BR WENHU LINE [/rail/metro/lines/wenhu-line/] 文湖線			
CHINESE NAME 木柵機廠 ^[2]	OPERATOR Taipei Rapid Transit Corporation [/rail/operators/trtc/] ^[1]	LINE Wenhu [/rail/metro/lines/wenhu-line/] ^[2]	DISTRICT Wenshan ^[2]
ROLE Secondary depot ^[2]	LINE OPENED 28 March 1996 ^[1]	CURRENT FLEET ALLOCATION TBC	

Overview

Muzha Depot, 木柵機廠, sits in Wenshan District between Xinguang Road Section 2 and the Jingmei [\[/rail/metro/stations/g05/\]](/rail/metro/stations/g05/) River, beside the Taipei Zoo [\[/rail/metro/stations/br01/\]](/rail/metro/stations/br01/) end of the original Muzha Line [\[/rail/metro/lines/wenhu-line/\]](/rail/metro/lines/wenhu-line/).^[2] DORTS gives its area as approximately 6.2 hectares and lists vehicle storage, maintenance, operations control, train washing, wayside maintenance and parts warehousing among its functions.^[1]

The depot began as the Muzha Line's main facility.^[2] When Neihu [\[/rail/metro/stations/br19/\]](/rail/metro/stations/br19/) Depot entered the operating arrangement, DORTS reclassified Muzha [\[/rail/metro/stations/br02/\]](/rail/metro/stations/br02/) as the Wenhu Line's secondary depot and Neihu as the main depot.^[2] The line itself opened on 28 March 1996, but the opened records do not isolate the depot's civil-work start, handover or commissioning dates.^[1]

Role and capacity

Two DORTS manuals describe capacity in different units that should not be combined. The network-planning inventory publishes room for 84 two-car married pairs.^[3] The depot-equipment table publishes 12 stabling roads, along with a 25-train fleet context and a test track.^[5] The 84-pair figure is therefore storage capacity, while 12 counts the roads used to provide it; neither is a count of four-car trains.^{[3] [5]}

The pair capacity is larger than the 51 pairs procured for the original Matra fleet, but DORTS does not explain in these pages whether the surplus represents operational flexibility, shared Wenhu storage, maintenance positioning or a different planning horizon.^[3] Current vehicle allocation by fleet and active/reserve status remains TBC.

Maintenance equipment

DORTS's equipment inventory identifies CM350 as the turnkey package containing complete heavy-maintenance equipment for 102 cars.^[4] It also lists CM351A for non-VAL-system test instruments and CM351B for non-VAL small maintenance equipment and tools.^[4] Those records correct the former page's suggestion that heavy overhaul might not happen here: the official inventory explicitly says complete heavy-maintenance equipment was procured for the original fleet.^[4]

The opened material does not establish which of that equipment remains active, what work has migrated to Neihu, or how responsibilities are divided for the Bombardier fleet. Those current workshop allocations remain TBC rather than being inferred from the depots' main/secondary labels.

Relationship with Neihu Depot

DORTS says the two depots support one another and share Wenhua train storage and maintenance.^[1] That wording establishes a paired maintenance system, not a one-fleet-per-depot assignment. Neihu provides the principal function and Muzha the secondary function, while the current fleet split is not published in the opened records.^[2]

The page's diagram locates the junction at **BR01** from the project's curated depot-join record. No opened prose source independently states that station code, so the exact named junction remains a structured-data fact rather than a claim about current workshop allocation.

Specifications

Site area	approximately 6.2 ha ^[3]
Stabling roads	12 ^[5]
Stabling capacity	84 married pairs ^[3]
Test track	Yes ^[5]
Heavy-maintenance equipment	Complete equipment for 102 cars ^[4]
Exact civil-work start	TBC
Exact depot commissioning	TBC
