How bus fare stages (段) actually work

Taipei and New Taipei buses do not charge one flat fare. They charge by the number of fare "segments" (段) a trip crosses, and where those segment points fall is not published as one complete list anywhere — only two examples are ever officially named.

HOW BUS FARE STAGES (段) ACTUALLY WORK			
LEGAL BASIS 臺北市公共汽車客運業營運管理自治條例, Article 11 ^[2]	FULL FARE NT\$15 per segment ^[3]	STUDENT FARE (EASYCARD) NT\$12 per segment ^[3]	CONCESSIONARY FARE NT\$8 per segment ^[3]
ON-BOARD TICKET SALES None — cash or e-ticket only, no change given ^[3]			

Taipei [\[/rail/thsr/stations/taipei/\]](/rail/thsr/stations/taipei/) and New Taipei's joint-operation buses do not charge a flat fare. They charge by 段 (段次) — fare segments — and a rider who does not know where the segment points fall on their own route has no reliable way to predict whether a trip costs one fare or two before boarding.

The rule, and its legal basis

Under 臺北市公共汽車客運業營運管理自治條例 (the Taipei City ordinance governing bus operations), Article 11 sets the underlying principle: a bus operator's fare should be uniform in principle, but a route with a longer run may instead be charged by segment or by distance^[2]. Article 9 of the same ordinance requires that the fare segment point (or buffer zone) be posted on the physical stop sign itself, alongside the terminus name, first/last bus times and headway^[2] — the segment structure is not meant to be a surprise at tap-out, at least not by design.

Taipei's Public Transport Office states the practical version of the rule plainly: 「本市聯營公車依據「臺北市公共汽車客運業營運管理自治條例」第11條規定採分段收費制，同時參採橋樑、河流等自然分界及重要轉運點（如華中橋、臺北車站等）訂定，並無長度及站數之強制要求，跨越分段點即加收1段票」^[1]. In

English: segment points are sited using natural boundaries — bridges, rivers — and major transfer hubs, with **no fixed rule for how long a segment has to be or how many stops it must cover**. Crossing a segment point (or its buffer zone) simply adds one segment's fare.

New Taipei's own city buses run on the identical mechanic. The joint Taipei/New Taipei bus portal states it for both cities in one sentence: 「雙北市區公車係依路段分段收費，搭乘2段票(含)以上路線之車輛，若跨越分段點 (或分段緩衝區)，應加收1段票」^[3].

What a segment actually costs

FARE CLASS	CASH	EASycard [/TICKETING/GUIDES/CARDS-PASSES-AND-FARES/]E-TICKET
Full fare	NT\$15	NT\$15 ^[3]
Student	NT\$12	NT\$12 (an 8-fold/20%-off card rate) ^[3]
Concessionary (elderly, disabled/companion, eligible children)	NT\$8	NT\$8 ^[3]

That per-segment rate is confirmed twice, independently: once by the joint government fare portal, and once by the operators' own trade association, which publishes the identical NT\$15/12/8 structure on its own site^[4]. Buses do not sell tickets on board and do not give change — the fare portal is explicit that payment is cash *or* stored-value card, with no other option, and no change is made for cash overpayment^[3]. Children under 115cm ride free outright; children 115cm or taller but under 6 with an identity document also ride free; one fare-paying adult may bring up to four such children at no charge^[3].

Where the segment points actually are

Officially, not many are named at all. Taipei's Public Transport Office's own FAQ gives exactly two worked examples: 華中橋 (Huazhong Bridge) and 臺北車站 (Taipei Main Station)^[1]. No government source fetched for this page publishes a complete list of every segment point on the network — Article 9 requires each one to be posted at its own stop, but that is necessarily a stop-by-stop disclosure, not a single published index.

Chinese Wikipedia's own article on Taipei's city buses offers a longer, nine-location list of what it calls "common" segment points — Shilin [/rail/metro/stations/r16/] (士林), Dazhi [/rail/metro/stations/br14/] (大直), Taipei Bridge [/rail/metro/stations/o13/] (臺北橋), Taipei Main Station, the Zhonghua Road north/south stops, Wanhua (萬華), the wholesale produce market (果菜市場), Gongguan [/rail/metro/stations/g07/] (公館), and Songshan [/rail/metro/stations/g19/] (松山) — mostly major transfer hubs or bridgeheads at the old Taipei City/County boundary^[6]. That list is not attached to any citation on the Wikipedia page itself, and it notably does **not** include

Huazhong Bridge, which is one of only two locations the regulator names directly^[1]. Both lists are published here as what they are — one official but minimal, one fuller but unverified — rather than merged into a single confident list.

How crossing multiple segments is counted

Chinese Wikipedia's article on New Taipei's own city buses gives a worked example of the counting logic. For a corridor running through zones A, B and C, with B as the segment point: riding within one zone, or from A to B, or from B to C, is one segment; riding all the way from A to C is two segments (the single-segment fare, doubled)^[7]. On a longer corridor with two segment points, A–B–C–D–E, both B and D count as crossing points^[7]. This is an illustrative example rather than a government fare rule in itself, but it does not contradict, and directly illustrates, the primary rule already confirmed above.

How many segments does a route actually have?

There is no fixed one-to-four-segment ceiling. Counting directly over this project's own already-committed New Taipei route-service data — 562 routes with a published fare row — segment counts run from 1 to 8: 128 routes are 1-segment, 77 are 2-segment, 37 are 3-segment, 13 are 4-segment, 8 are 5-segment, 3 are 6-segment, and 3 reach 8 segments, alongside a handful of free routes^[5]. Taipei-proper's committed bus dataset has no comparable segment-count field, so its distribution remains TBC.

How this interacts with transfers and the regional pass

The bidirectional MRT–bus transfer discount — NT\$8 for an ordinary card, NT\$6 for a student card, NT\$4 for a welfare card, within a 60-minute window — applies against a segment fare the same way it applies against any bus fare^[8]. That same FAQ's own title is explicit that the discount excludes "distance-charged buses" (里程收費公車) — a separate, named fare category outside the segmented system described above; its own fare mechanics remain TBC.^[8]

The TPASS 基北北桃1200都會通 regional pass sidesteps the segment system entirely for a pass holder: its own operating notice confirms unlimited rides at unlimited distance on both Taipei's joint-operation network and New Taipei's city buses^[9]. A pass holder does not pay per segment at all — there is no separate multi-segment surcharge or cap to interact with.

Specifications

Officially named segment-point examples	Huazhong Bridge, Taipei Main Station ^[1]
New Taipei published routes, segment range (committed data)	1–8 ^[5]
MRT–bus transfer discount, ordinary card	8 NT\$ ^[8]
Transfer time window	60 min ^[8]
