Taoyuan Airport MRT

The purple express-and-commuter line from Taipei Main Station to the airport and on into Taoyuan — a different operator, a different fare system, and the network's only express/local pattern.

THE LINE

✦ NOT ESTABLISHED

A AIRPORT MRT LINE [/RAIL/TYMC/LINES/AIRPORT-MRT/] 桃園機場捷運線			
LINE CODE A ^[1]	OPERATOR Taoyuan Metro Corporation [/rail/operators/tymc/] (TYMC [/rail/operators/tymc/]) ^[2]	TERMINI A1 — A22 ^[1]	STATIONS 22 ^[1]
OPENED 2 March 2017 ^[2]	A22 EXTENSION OPENED 31 July 2023 ^[5]	ROUTE LENGTH 51.76 km (TDX) / 51.03 km (DORTS) ^[1]	DEPOTS Luzhu (蘆竹機廠), Qingpu (青埔機廠) ^[9]
CAPITAL NT\$3 billion, Taoyuan [/rail/thsr/stations/taoyuan/] 64.01% / New Taipei [/rail/thsr/stations/taipei/] 29.32% / Taipei [/rail/thsr/stations/taipei/] 6.67% ^[18]			

Overview

The airport line is the network's odd one out three times over: it belongs to Taoyuan Metro [/rail/operators/tymc/] rather than either Taipei [/rail/thsr/stations/taipei/] operator^[2], its fares sit outside the Taipei distance bands^[8], and it runs an express/local service pattern found nowhere else on the system^[6] — two fleets, one line, distinguished on the platform by the purple and blue liveries of the 2000-type and 1000-type trains that run it^{[13] [14]}.

Route and alignment

The station list beside this page is generated from Taiwan's TDX open-data platform and is current: all 22 stations, [A1](#) through [A22](#), including the non-standard code [A14a](#) for Airport Hotel Station `[/rail/metro/stations/a14a/]` — plain [A14](#) is reserved for the still-unbuilt Terminal 3 station ^[1].

TDX's [A1](#) route records 51.76 km to [A22](#), while the New Taipei DORTS project record gives the line as 51.03 km and describes 22 stations, 15 elevated and seven underground ^[1] ^[4]. DORTS further describes approximately 10.92 km of underground alignment and 40.11 km of elevated alignment, running from Taipei through Sanchong `[/rail/metro/stations/o15/]`, the airport and the Taoyuan `[/rail/thsr/stations/taoyuan/]` HSR area to the Zhongli side ^[4]. Those are different published measurements; the sources do not identify which engineering boundary accounts for the 0.73 km difference ^[1] ^[4].

Planning and approvals

Sources disagree about when this line's history starts because different bodies mean different things by "planning." The first fully verified institutional milestone is the central government's October 1996 decision to build it as a BOT (build–operate–transfer) concession, and Long Life International Development Co. won that concession in 1998 ^[9]. The BOT model collapsed on 31 December 2002, when Long Life and the High Speed Rail Bureau agreed to terminate the contract ^[9]. Government took over: MOTC designated the High Speed Rail Bureau as the project's builder on 28 October 2003, and the central government approved the construction plan on 9 March 2004 ^[3] ^[4].

Construction history

Construction of the Sanchong–Airport– Zhongli section and its E&M systems formally started 27 February 2006 ^[4]; TYMC's own history page instead marks 26 June 2006, the date of a ceremonial groundbreaking presided over by the Premier ^[3] — two different milestones in the same year, not a contradiction. DORTS records that Taipei rejected the originally elevated Sanchong–Taipei section on urban-design and land-use grounds; Taipei City agreed to fund the extra cost of underground construction, and that section formally started on 25 September 2006 after its design and construction were assigned to DORTS ^[4]. The detailed design ran from March 1998 through 2002, according to the same project chronology ^[4].

The opening date itself moved repeatedly. The earliest announced target was January 2009; by March 2016 it had changed six times ^[10]. The fetched report gives that count but not a complete dated list of each change. The line finally opened **2 March 2017** ^[2] ^[4]. TYMC's chronology records the 99% system-stability test on 20 November 2016, Ricardo's safety certification on 2 December, initial inspection on 3–4 December, final inspection on 29–30 December, the operating permit on 25 January 2017 and trial service from 2 February ^[3].

Engineering and contract disputes — two figures confirmed, a widely repeated total not found anywhere

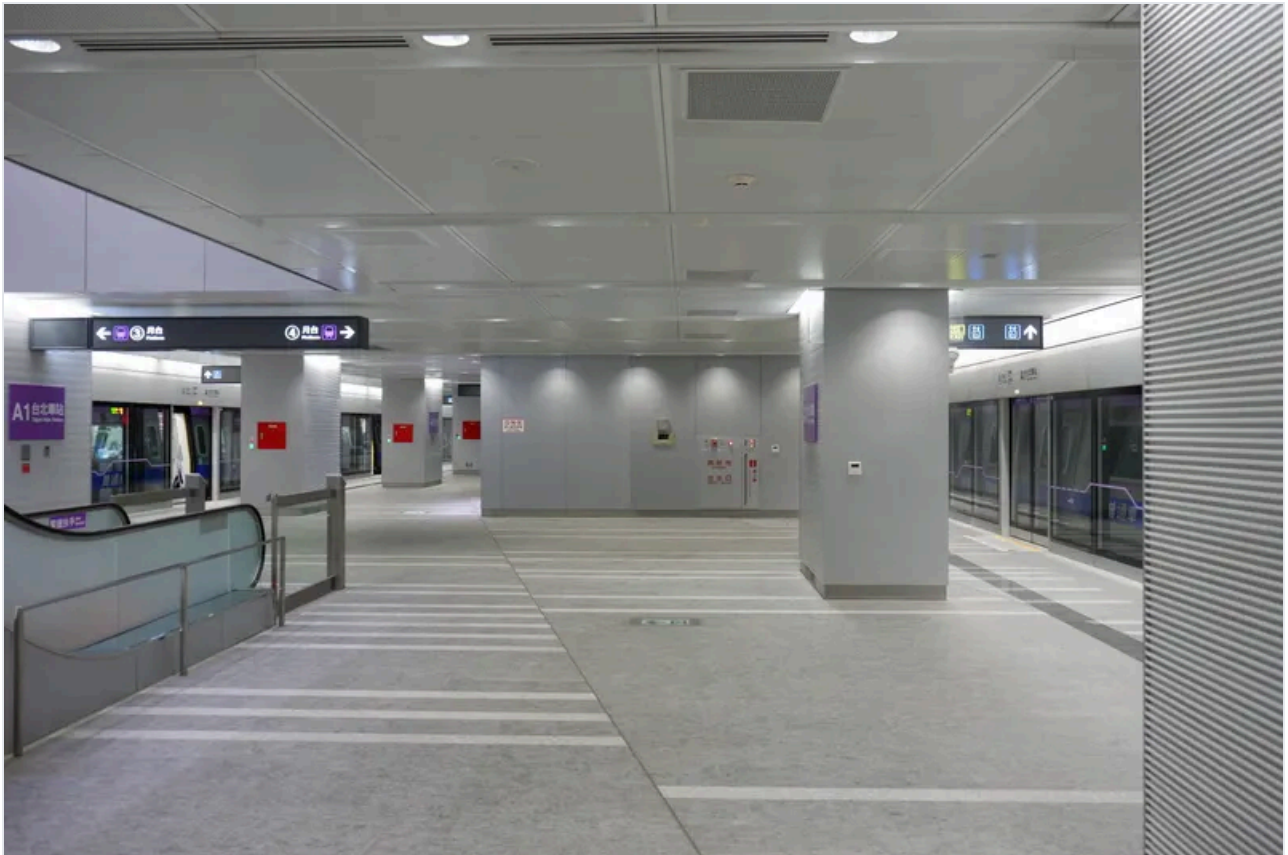

The main electromechanical contract (ME01) went to a consortium led by the Japanese trading house **Marubeni** (丸紅), with Kawasaki Heavy Industries and Hitachi as named subcontractors. In January 2017, weeks before opening, the High Speed Rail Bureau announced it would impose a **NT\$2.5 billion delay penalty** — the contract's maximum, calculated at 0.05% of contract value per day of delay — and had already **withheld roughly NT\$1.9 billion in performance bonds**, over Marubeni's unauthorised subcontracting of the signalling system, which its contract required it to design itself, to a British firm^[11]. Marubeni's own counter-claim against the Ministry, seeking NT\$12.9 billion over repeated design changes, was reported in the same account^[11]. Both of the Bureau's figures were independently corroborated by two further contemporaneous reports naming the same amounts and the same reasons.

A combined "NT\$7.2 billion" total for this dispute circulates widely. NT\$2.5 billion plus NT\$1.9 billion is NT\$4.4 billion, not NT\$7.2 billion, and no primary or secondary source read for this page — not the three contemporaneous 2017 news accounts, not zh.wikipedia's own article on the line, which contains no Marubeni monetary figures at all — states a combined total of any kind. The NT\$7.2 billion figure appeared repeatedly in this research run's own search-engine result summaries, never inside a quoted source sentence, and in one case alongside an unrelated, later, and much smaller 2021 dispute — the Railway Bureau withheld NT\$726.93 million from Marubeni that year for missing express-train travel-time, speed and headway targets^[12] — that shares a leading digit and may be the source of the confusion. The two confirmed figures, and Marubeni's name, are published here on the strength of three independent contemporaneous accounts; the total is not, because it could not be found stated anywhere.

Operations and service patterns

Two services share the same track. The **express** (直達車), in purple, calls at **A1**, **A3**, **A8**, **A12** and **A13**; a peak-only enhanced express additionally serves **A18** and **A21**^[6] — zh.wikipedia names this pattern the Huanbei Express, giving it a run time of about 64 minutes against roughly 39 minutes for the base **A1**–**A13** express^[9]. The **commuter** (普通車), in blue, calls at every station from **A1** to **A22**; the **A21**–**A22** section between Huanbei and Laojiexi carries commuter trains only^[6].

This site's TDX pull cannot show the skip-stop pattern directly: every route TDX defines for this line lists consecutive stops through every intervening station, so the shorter "A-2" and "A-3" routes in the underlying data are all-stops services over part of the line, not the express — the express pattern above rests on TYMC's own timetable page rather than the generated station data^{[1] [6]}.

A1 Taipei Main Station, the line's Taipei terminus.

LITTLEBTC, CC BY-SA 4.0, WIKIMEDIA COMMONS

Depots

The fully read line account names Luzhu Depot (蘆竹機廠) and Qingpu Depot (青埔機廠) as the two maintenance bases serving the Airport MRT ^[9]. The source does not publish a current set-by-set allocation between them, so that operational detail remains TBC.

Rolling stock

Two fleets, two manufacturers, sharing the same 1,435mm gauge and DC 750V third-rail supply ^[13] ^[14].

The **express fleet (2000-type, purple)** is built entirely by **Kawasaki Heavy Industries**, delivered 2011–2013 for the 2017 opening: 11 five-car sets, 55 cars, each set four passenger cars plus a dedicated luggage car ^[13]. Transverse seating, overhead luggage racks, WiFi and USB charging are fitted; wireless charging pads are noted in one source as currently suspended, rather than the always-on feature sometimes described ^[13]. Capacity is around 855 per set, with 206 seats and eight wheelchair spaces ^[13].

Inside an express (2000-type) train.

CHENG-EN CHENG FROM TAICHUNG CITY, TAIWAN, CC BY-SA 2.0, WIKIMEDIA COMMONS

The **commuter fleet (1000-type, blue)** was built under an industrial- cooperation arrangement: Kawasaki built the prototype set and three later sets (101, 118–120); the rest, sets 102–117, were assembled domestically by **Taiwan Rolling Stock Co.** (台灣車輛股份有限公司)^[14]. There are currently 20 four-car sets, 80 cars, with longitudinal seating for higher standing capacity^[14]. Per-set seating is 188 — one source's own summary prose describes this as "per car," which its own per-car table contradicts (44+47+50+44 seats across the four cars, summing close to 188), so this page publishes the per-set reading^[14].

Both fleets run at 100 km/h in service, with a 110 km/h design maximum^[13] ^[14].

Stations and passenger facilities

Free advance check-in and baggage drop operate at two stations: **A1 Taipei Main Station**, on B1, 06:00–21:30, and **A3 New Taipei Industrial Park** [/rail/metro/stations/y20/] **Station**, on 1F, 09:00–16:00, both closing 3 hours before flight departure^[7]. TYMC's own page does not itself list participating airlines and links onward to the airport operator's page for the current list; that page returned an access error to this site's tooling, so the airline list below rests on secondary aggregation rather than a primary fetch, checked 12 August 2026: **A1 — China Airlines, Mandarin Airlines, EVA Air, UNI Air, Cathay Pacific and Starlux;** **A3 — China Airlines, Mandarin Airlines, EVA Air, UNI Air, Tigerair Taiwan, and the AirAsia group.** Treat this list as liable to change without notice, and reconfirm with the airline or station before relying on it.

Extensions and depot interface

A22 Laojiexi opened **31 July 2023**, the same day its operating permit was issued ^[5]. MOTC's own account gives three causes for the delay together, not one: COVID-era disruption to foreign electromechanical suppliers through 2020–2022, high technical difficulty integrating the extension's newer signalling generation with the existing line (requiring extended testing), and design changes needed to coordinate with the separate Taoyuan rail-undergrounding project ^[5]. Total project cost was NT\$17.302 billion ^[5].

Two further extensions are in progress: **A23 Zhongli**, which would connect directly with the Taoyuan Metro Green Line, and **A14**, a new underground station serving the airport's Terminal 3. **Both extensions' opening dates and budgets are TBC**. News reporting circulates a July 2028-to-around-2029 slip for **A23**, attributed to a platform redesign for the Green Line connection, and a late-2027 target for **A14**, each with its own NT\$ budget figure — none of it established from a source read in full here, still TBC. No fetched Railway Bureau project page or dated full article establishes either opening date or budget; settling them needs one of those primary records rather than a summary.

Ridership and finances

TYMC's finances went from a NT\$706 million negative net worth and a NT\$1.067 billion bank loan in 2022 to record profitability within three years. 2023 was the company's first profitable year, though no source found here gives a precise NT\$ figure for that year specifically. 2025's surplus reached **NT\$679 million**, a record, with **ridership over 46 million, up 12% on 2024**, and the bank loan **fully repaid in April 2025** ^[15] ^[16]. Taoyuan Mayor 張善政 described pre-2022 operations as "pitiful" (淒慘) and the company as now debt-free (零負債) ^[16].

2024's figures do not fully agree between sources: one report, published nine days before the end of 2024, gives a NT\$500 million surplus for that year ^[17]; a later, retrospective account instead gives "over NT\$400 million" ^[16] — plausibly because the earlier figure was a projection rather than a final result. Neither source gives an exact 2023 figure; one implies roughly NT\$124 million for 2023 through a "fourfold increase to NT\$500 million" framing of its 2024 number, but that implied figure cannot be checked against any other source ^[17].

Fares and ticketing

A single journey from Taipei Main Station to either airport terminal costs NT\$160, the line's maximum single fare; a NT\$10 system-wide discount that applied until January 2025 was withdrawn from 2 January 2025, cited to rising electricity costs ^[17]. Express and commuter trains are priced identically. Combination tickets pair an airport-line return with a Taipei Metro pass: NT\$520 with a 48-hour pass, NT\$600 with a 72-hour pass ^[8]. EasyCard ^[/ticketing/guides/cards-passes-and-fares/], iPass and icash 2.0 are all accepted, and the line is covered by the cross-city 基北北桃1200都會通 monthly pass at unchanged pricing ^[8].

Sources

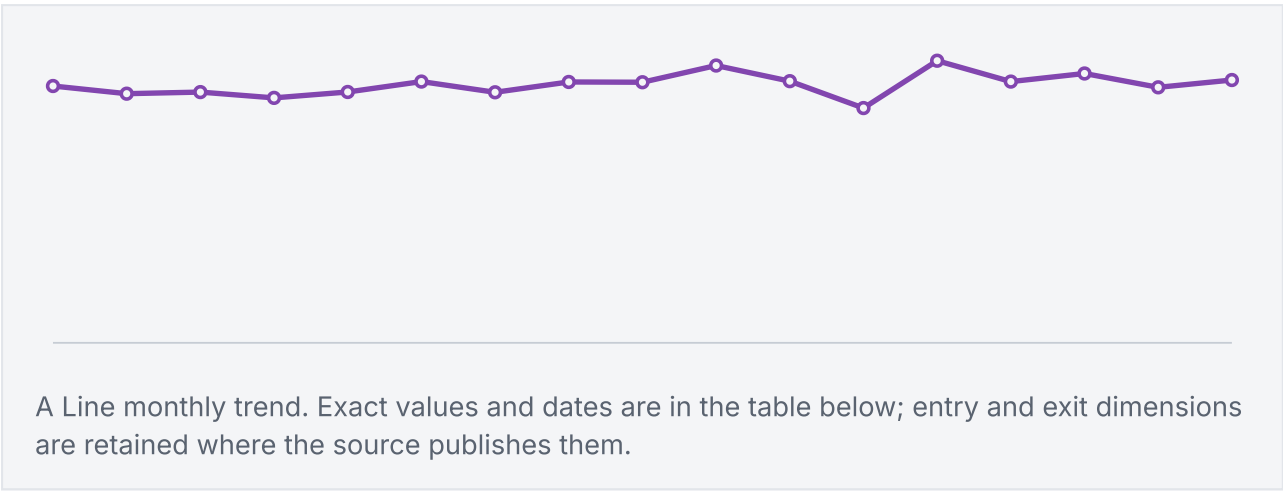

Station codes, sequence, coordinates and route length come from **Taiwan MOTC's TDX platform**, operator TYMC — government open data, retrieved 12 August 2026^[1]. TDX has no way to represent this line's skip-stop express pattern, so service-pattern detail throughout this page comes from TYMC's own timetable instead. Everything else is cited inline and listed above; where a figure rests on a search-engine synthesis rather than a page fetched and read in full, the source note says so.

桃園機場捷運2024盈餘5億創新高！為何全線取消車票10元優惠？
SECONDARY 城市學 (GVM) accessed 2026-08-12

Published 22 December 2024 — nine days before year-end, so its 2024 figures likely a projection rather than a final result, which may explain why they do not match Storm Media's later 'over NT\$400 million' figure for the same year. States the NT\$10 discount ends 2 January 2025, per Chairman 陳志長, citing rising electricity costs. States 2024 daily ridership 114,289.

18 Taoyuan Metro Corporation [<https://zh.wikipedia.org/zh-tw/桃園捷運公司>]

桃園捷運公司

SECONDARY 維基百科 (Chinese Wikipedia) accessed 2026-08-12

Read in full. Founded 6 July 2010, capital NT\$3 billion, ownership split Taoyuan 64.01% / New Taipei 29.32% / Taipei 6.67% by original construction-cost share. Renamed 25 December 2014 when Taoyuan County became a municipality. Headquarters at the Qingpu Depot site, 251 Linghang North Road Section 4, Dayuan District — beside A17 Linghang, not A18 Taoyuan HSR.
