

[← Back to the previous page](#)

Metro

The metropolitan metro network — the lines a rider treats as one railway, under one numbering scheme and one fare system.

Stations

192 pages

Every station on this network, grouped by line — generated from the same registry that draws the maps.

Lines

Route overviews, station lists, operating hours and service patterns.

Wenhu Line

BR 文湖線

Taipei's driverless brown line — no cab, a front window you can stand at, and a rubber-tyred guideway that climbs hills the rest of the network cannot.

Sanying Line

LB 三鶯線

New Taipei's newest railway — a driverless elevated line to Sanxia and Yingge, open six weeks and in a dated free trial, documented from the operator and government.

Tamsui–Xinyi Line

R 淡水信義線

The red line — the network's north–south spine, from the riverside at Tamsui through the core to Xiangshan, and the oldest right-of-way on the system.

Songshan–Xindian Line

The green line — three separate DORTS construction projects run as one, underground end to end, with the network's oddest branch climbing into the middle of a depot.

Zhonghe–Xinlu Line

O 中和新蘆線

The orange line — a Y-shaped route built as three separate projects, whose two northern arms to Luzhou and Huilong share one southern trunk through Zhonghe.

Bannan Line

BL 板南線

The blue line — the east-west trunk through the main station, built in eight openings over sixteen years, and the one line whose ridership its own operator does not publish separately.

Circular Line

Y 環狀線

New Taipei's orbital, and the line an earthquake took apart — eleven displaced girders, a 92 cm shove, eight months shut, and a Control Yuan report that traced it to a plate milled 36 mm too deep.

Danhai LRT

V 淡海輕軌

New Taipei's first light rail — street-running trams serving the Tamsui new town, built on Taiwan's own domestic light rail vehicle, with a second phase under construction.

Ankeng LRT

K 安坑輕軌

The second New Taipei light rail line — a valley feeder into the Xindian corridor, with a button you have to press to get the doors to open.

Taoyuan Airport MRT

A 桃園機場捷運線

The purple express-and-commuter line from Taipei Main Station to the airport and on into Taoyuan — a different operator, a different fare system, and the network's only express/local pattern.

Rolling Stock

Train fleets — builders, technical specifications, formations and where each type runs.

VAL256

The French fleet that opened the network in 1996 — and spent eighteen months in a depot having its brain replaced while the

Innovia APM 256 (C370)

Not a VAL, and not descended from one — a Canadian people mover built to fit a French railway, because the alternative was

line it built ran without it.

BR

C301

The fleet that opened the high-capacity network — Kawasaki-built trains for the Tamsui corridor, since re-equipped with new traction.

LOKSENG01 [https://commons.wikimedia.org/wiki/File:A_TAIPEI_METRO_C301_TRAIN_APPROACHING_ZHONGYI_STATION.JPG] • **CC BY-SA 4.0** [<https://creativecommons.org/licenses/by-sa/4.0/>]

R

C321

Siemens trains for the Bannan corridor — a fleet whose body-shell story says something about how specifications get enforced.

SINSYUAN [https://commons.wikimedia.org/wiki/File:C321_AT_ZHONGXIAO_XINSHENG_20250906.JPG] • **CC BY-SA 4.0** [<https://creativecommons.org/licenses/by-sa/4.0/>]

BL

C341

The fleet the city did not buy — a small Siemens batch procured by a civil contractor, and a procurement story nobody has told in English.

C371

The workhorse of the network's middle generation — and, by the account to be verified here, the first metro EMU manufactured in Taiwan.

G

C381

The newest Kawasaki generation — built for the Songshan and Xinyi extensions, with a family resemblance to the C371 it grew from.

A1998117TW [HTTPS://COMMONS.WIKIMEDIA.ORG/WIKI/FILE:TAIPEI_RAPID_TRANSIT_SYSTEM_-_C381_HIGH_CAPACITY_TRAIN.JPG] • CC BY-SA 3.0 [HTTPS://CREATIVECOMMONS.ORG/LICENSES/BY-SA/3.0]

R

Depots

Stabling and maintenance facilities — location, capacity, and the lines and fleets they serve.

Muzha Depot

Neihu Depot

Where the network started — the first depot Taipei ever built for a metro, and demoted in 2009 from the whole of the system's engineering capability to the junior of two.

玄史生 [HTTPS://COMMONS.WIKIMEDIA.ORG/WIKI/FILE:MUZHA_LINE_BETWEENTAIPEI_ZOO_STATION_AND_MUZHA_DEPOT.JPG] • CC BY-SA 3.0 [HTTPS://CREATIVECOMMONS.ORG/LICENSES/BY-SA/3.0]

The line's main workshop — named after a district it is not in, and joined to the running line at the opposite end from the station that shares its name.

TAIWANKENGO [HTTPS://COMMONS.WIKIMEDIA.ORG/WIKI/FILE:2021_NEIHU_DEPOT_I.JPG] • CC BY-SA 4.0 [HTPS://CREATIVECOMMONS.ORG/LICENSES/BY-SA/4.0]

Beitou Depot

The network's first construction site and its principal depot — where the high-capacity system began, and where new fleets are still commissioned first.

LOKSENG01 [HTTPS://COMMONS.WIKIMEDIA.ORG/WIKI/FILE:A_TAIPEI_METRO_C301_TRAIN_AT_BEITOU_DEPOT_01.JPG] • CC BY-SA 4.0 [HTTPS://CREATIVECOMMONS.ORG/LICENCES/BY-SA/4.0]

Xindian Depot

The green line's depot — with a metro branch line climbing through the middle of it.

USER:ALEXSH [HTTPS://COMMONS.WIKIMEDIA.ORG/WIKI/FILE:TAIPEI_MRT_XINDIAN_DEPOT1.JPG] • CC BY-SA 3.0 [HTTP://CREATIVECOMMONS.ORG/LICENSES/BY-SA/3.0/]

Xinzhuang Depot

The orange line's depot, built on the grounds of the Losheng Sanatorium — the most contested piece of land in the network's history.

Tucheng Depot

The Bannan Line's western depot.

Nangang Depot

The Bannan Line's eastern depot.

0

The 捷運 network as this site files it: TRTC's lines, New Taipei Metro's Circular, Sanying and light rail lines, and Taoyuan Metro's Airport MRT. Three companies, and from a rider's point of view one railway — one stored-value card, one interchange network, one station-numbering scheme, one map.

That is the boundary this system draws, and it is the boundary the fare system draws. It is not drawn by technology: the network contains rubber-tyred metro, steel-wheel metro and street-running light rail, and none of those is a reason to file a line somewhere a rider would not look for it. Taiwan Railway and high speed rail are outside it because they are separate networks with separate ticketing, separate stations and separate operators — not because they are a different kind of train.

An independent, non-commercial reference site. Not affiliated with Taipei Rapid Transit Corporation, Taipei City Government, or any bus operator. Line colours are the official values published by each operator through Taiwan MOTC's open data platform. [About this site.](#)

Station names, codes and sequence from TDX Transport Data eXchange, Ministry of Transportation and Communications, operators TRTC, NTMC, TYMC, and TMRT. Government open data. Retrieved 2026-08-22; source last updated 2020-01-31. The 12 Sanying station records absent from TDX are sourced directly to New Taipei Metro and government publications on their pages. Provenance.
