Every source disagreement published by this guide, generated from the conflict sections in its content corpus.

YouBike — Conflicts in the static station snapshot

Discussed on YouBike [\[/bike/history/youbike/\]](/bike/history/youbike/) in the source page's "Conflicts in the static station snapshot" section.^[1]

Conflicts in the static station snapshot

The 23 August TDX snapshot records 4,086 rows across Taipei [\[/rail/thsx/stations/taipei/\]](/rail/thsx/stations/taipei/), New Taipei and Taoyuan [\[/rail/thsx/stations/taoyuan/\]](/rail/thsx/stations/taoyuan/), including 50,877 Taipei docks^[1]. The 25 August snapshot records 7,403 rows across five municipalities, including 50,876 Taipei docks^[2]. These are different retrievals of a live-maintained feed: the later value adds Taichung [\[/rail/thsx/stations/taichung/\]](/rail/thsx/stations/taichung/) and Kaohsiung and changes Taipei's returned capacity by one, so both values are published rather than averaged or selected as a definitive total^{[1] [2]}.

Imported diesel bus and coach chassis — Isuzu

Discussed on Imported diesel bus and coach chassis [\[/bus/models/imported-diesel-chassis/\]](/bus/models/imported-diesel-chassis/) in the source page's "Isuzu" section.^[3]

Isuzu

台北合眾汽車有限公司 is the current distributor, though sources conflict on when its agency began: 2014 per the distributor's own "About" page^[3], or 2012 per an independent account that also gives a fuller history — first Taiwan exports in 1952, domestic manufacture 1996–2007 halted after the then-manufacturer's parent bank collapsed in a 2007 fraud scandal^[4]. Current

chassis, fetched directly from the live site: **NQR(Bus) 8.5t** (4HK1 engine, 190PS, Euro-5-equivalent without urea injection) and **LT Bus 14.5t**^[5]. No full-size route-bus or highway-coach Isuzu model (Erga, Gala, Journey) was found sold or deployed in Taiwan.

RAC-700 (Tron Energy) — Conflicting figures for earlier generations

Discussed on RAC-700 (Tron Energy) [</bus/models/rac-700/>] in the source page's "Conflicting figures for earlier generations" section.^[6]

Conflicting figures for earlier generations

Wikipedia's article on the RACE150 platform describes two earlier generations with figures that do not match the current spec sheet above — published here as a conflict, not resolved, since neither source states an exact model-year boundary and the article's underlying footnotes were not independently re-checked this pass^[6] ^[7]:

- **Dimensions and weight:** 11,990×2,480×3,220 mm, curb weight 12,140 kg, max weight 15,350 kg (Wikipedia, "2011–2017" generation)^[6] against the current 12,000×2,500×3,206 mm, 13,400 kg, 16,100 kg above^[7]. The 5,800 mm wheelbase is the one figure that agrees across both^[6] ^[7].
- **Battery:** 250 kWh (Wikipedia, "2011–2017"); 282 kWh, ternary lithium (Wikipedia, "2018+")^[6]; 350 kWh, LFP (current spec sheet, corroborated by a 2026 news report of a "newly launched" 350 kWh dual-gun fast-charge model)^[7] ^[8].
- **Motor:** "Fulton Electric" AC air-cooled, 150 kW (Wikipedia, "2011–2017"); Tatung (大同) water-cooled PMSM/SRPM, 189 kW (Wikipedia, "2018+")^[6]; PMSM, 350 kW max (current spec sheet)^[7].

Alighter (Tang Eng) — Export, not domestic VSCC qualification

Discussed on Alighter (Tang Eng) [/bus/models/tang-eng-alighter/] in the source page's "Export, not domestic VSCC qualification" section.^[9]

Export, not domestic VSCC qualification

The first export shipment — 20 buses to Guatemala — cleared customs 8 February 2023 and shipped two days later, arriving after a 42-day voyage on 30 March, deployed by operating partners Innovate Group and Luka Electric Group in Antigua and Mixco^[9] ^[10]. A magazine account reports unverified order commitments of 100 buses/year from Guatemala and 200 buses/year from Paraguay, at a cited unit price of USD 450,000 — figures not checked against any contract document^[10].

唐榮車輛科技 **does not appear on any VSCC electric-bus qualified-model register checked for this site** — current, lapsed-certificate, or the earlier demonstration-programme list — see the VSCC qualified-model registry [/bus/models/vsc-qualified-registry/] ^[11]. This directly contradicts a 2021-era secondary claim that Tang Eng was "among the first companies to pass the electric bus demonstration programme vehicle qualification review"^[12]. Whether Tang Eng never qualified domestically, or qualified and was later dropped from the register entirely — rather than moved to the lapsed-certificate section where other manufacturers' expired models do appear — is not explained by any source found^[11] ^[12].

VSCC electric bus qualified-model registry — What the primary sources establish, and what they do not

Discussed on VSCC electric bus qualified-model registry [/bus/models/vsc-qualified-registry/] in the source page's "What the primary sources establish, and what they do not" section.^[13]

What the primary sources establish, and what they do not

The Control Yuan independently corroborates four qualified manufacturers as of 29 November 2024 — 成運, 華德, 創奕 and 鴻華 — with combined planned capacity of 5,960 vehicles by the end of 2025^[13]. 唐榮車輛科技 (Tang Eng) does not appear on any of the four register snapshots checked for this page, current or lapsed — see its own page [/bus/models/tang-eng-alighter/] for the secondary source this contradicts.

The regulation governing the process, 車輛型式安全審驗管理辦法, is issued under 公路法第63條第5項 and requires domestic bus body-builders to submit chassis construction specifications, and requires Class A/B buses to submit durability-performance test verification^[14]. Its own text defines the certifying body generically as "a domestic vehicle-professional institution entrusted by MOTC" rather than naming VSCC specifically — VSCC's own page is what identifies VSCC as that body^[14] ^[15].

This register gives model names, type codes, applicants and route/use classes — it does not give unit counts, fleet allocations, or vehicle-by-vehicle registrations. Taiwan publishes no equivalent census; per-model deployment figures on this site come from operator and news records, not from this registry, and are marked as such.

Haloha Shipping Co., Ltd. — TDX operator record — Water operations recorded by public sources

Discussed on Haloha Shipping Co., Ltd. — TDX operator record [/bus/operators/0606-20m33c/] in the source page's "Water operations recorded by public sources" section.^[16]

Water operations recorded by public sources

The Taipei City emergency-support plan lists 好樂好 among the city's Blue Highway [/ferry/routes/blue-highway/] operators, names 葉志哲 as chairman and publishes 2558-5519 and 0937-185158 as emergency contacts^[16]. Its vessel table attributes 11 small vessels to the company and gives 19.93 tonnes, 12 knots and 1.2 metres in the first row^[16]. The report is a dated planning record^[16]; it does not establish that 11 vessels remain in service today, and the remaining vessel rows are not reattributed here because the extracted table does not repeat the company name on each row^[16].

A 2004 Taipei Transportation Department announcement records a cross-city trial between Dadaocheng, Guandu [\[/rail/metro/stations/r25/\]](/rail/metro/stations/r25/) and Fisherman's Wharf ^[17]. It says 好樂好 planned to use the three passenger boats 飛魚一號, 飛魚五號 and 飛魚六號, with two weekday and six holiday departures, and publishes route-by-route fares and approximate journey times ^[17]. This is historical operating evidence, not a current timetable ^[17].

The 2020 official timetable records 好樂好 Dadaocheng–Tamsui sailings at NT\$300 full fare and NT\$150 half fare, plus Dadaocheng river cruises at NT\$200 and NT\$100, with operating days and departure times listed separately ^[18]. That timetable also says EasyCard [\[/ticketing/guides/cards-passes-and-fares/\]](/ticketing/guides/cards-passes-and-fares/) was accepted by 好樂好, while noting that operators' hours could change and passengers should confirm before travel ^[18]. The Public Transportation Office's current FAQ says operators also offer non-fixed charters, dining and package trips, and lists a different 好樂好 service number, 02-2550-2339 ^[19]. The two published phone numbers are retained as a dated source conflict rather than silently selecting one.

The company's booking page currently advertises a regular Dadaocheng Wharf–Tamsui Wharf service of about 90 minutes that sails when reservations reach ten people, and its page lists monthly 2026 event entries ^[20]. That current listing is a booking condition, not a guarantee that every advertised departure will run; the page itself says the service is scheduled subject to the listed conditions ^[20].

Bali District Office — New Bus authority record — F123 branch change and official conflict

Discussed on Bali District Office — New Bus authority record [\[/bus/operators/balidistrictoffice-zlmm0v/\]](/bus/operators/balidistrictoffice-zlmm0v/) in the source page's "F123 branch change and official conflict" section. ^[21]

F123 branch change and official conflict

The district office's 9 January 2026 news release says F123 was adjusted from 1 January, adding three branches: F123-Bali Psychiatric Center, F123-Xiagu via Bali Psychiatric Center and F123-Shihsanhang Culture Park via Bali Psychiatric Center ^[21]. It says the main line was also adjusted to departures at 06:40 and 15:25 and frames the change around hospital access, commuting, schooling and future transfer at the Tamsui–Bali bridge ^[21].

The full text health-center page publishes a different F123 set: weekday departures at 07:00, 12:05 and 15:50, with a holiday 06:40, 12:05 and 15:50 pattern ^[22]. Both are official government pages fetched for this record, so the values are preserved rather than averaged or silently replaced. The news release is dated and specifically describes the 2026 adjustment; the health-center page supplies the detailed text timetable but does not state a matching publication date ^[21] ^[22].

Capital Bus Co., Ltd. — Taipei operator profile — Company history and legal identity

Discussed on Capital Bus Co., Ltd. — Taipei operator profile [\[/bus/operators/capitalbus-1icts2l/\]](/bus/operators/capitalbus-1icts2l/) in the source page's "Company history and legal identity" section. ^[23]

Company history and legal identity

The MOEA record identifies Capital Bus as 首都客運股份有限公司, with the English charter name CAPITAL BUS TRANSPORTATION Co., LTD. It gives unified business number 34049262, registered address in Sanchong [\[/rail/metro/stations/o15/\]](/rail/metro/stations/o15/), paid-in capital of NT\$530 million, representative Li Bowen and a registration date of 14 August 1975 ^[23]. The same record lists city bus, intercity bus, tour-bus, vehicle-repair and related activities among the approved business categories ^[23].

The operator's own company profile gives a different dated milestone: it says the company was founded on 1 July 1976 ^[24]. Taipei PTO's history places the predecessor called San Chung City Bus among the five private operators entering the city's joint-operation system on 30 April 1977, and labels that predecessor as today's Capital Bus ^[25]. Those dates are kept as separate registration, founding and network-transition events rather than silently chosen as one origin date.

Danan Bus Co., Ltd. — New Taipei operator profile — Company history and legal identity

Discussed on Danan Bus Co., Ltd. — New Taipei operator profile [\[/bus/operators/dananbus-o4rqys/\]](#) in the source page's "Company history and legal identity" section.^[29]

Company history and legal identity

Danan's own profile says it was established in August 1969 by Yulon Motor and the Veterans Affairs Council, with early investment vehicles including Rongqiao and Xufa; it says the Veterans Affairs Council took over in February 1977 and that Danan and Shin-Shin jointly operated intercity services afterward ^[29]. The MOEA record gives a different date for the legal entity: 24 April 1969, unified business number 11011623, registered address 臺北市士林區承德路四段274號, representative 張捷, total capital NT\$350 million and paid-in capital NT\$308,652,850 ^[30]. These are retained as separate operator-stated and statutory dates rather than collapsed into one founding claim ^[29] ^[30].

The current MOEA director table records the Veterans Affairs Council as the represented entity for three directors, alongside corporate representations for 欣湖天然氣, 欣泉投資 and 欣欣客運 ^[30]. That is evidence of the current registered board representation shown by the record; it does not establish a complete parent-group or merger chronology ^[30].

Kuo-Kuang Motor Transportation Co., Ltd. — New Taipei operator profile — Legal identity and operating character

Discussed on Kuo-Kuang Motor Transportation Co., Ltd. — New Taipei operator profile [[/bus/operators/kuokuangbus-z1k94y/](#)] in the source page's "Legal identity and operating character" section. ^[33]

Legal identity and operating character

Kuo-Kuang Motor Transportation is the English rendering used here for 國光汽車客運股份有限公司. The Ministry of Economic Affairs registry identifies the company by unified business number 70810572, records it as approved, and gives 15 June 2001 as its approved-establishment date ^[33]. The same statutory record names 王雅萱 as representative, gives the registered address as 1F, No. 53, Section 4, Chongyang Road, Sanchong District, New Taipei City, and records NT\$465 million in paid-in capital ^[33]. Its registered activities cover highway passenger transport, city-bus passenger transport and sightseeing-bus passenger transport, alongside parking, vehicle repair and other ancillary activities ^[33].

The registry lists corporate representatives on the current board from construction, vehicle-manufacturing and investment companies, but it does not identify a single parent group ^[33]. That distinction matters because a board representation list is evidence of the registered governance arrangement, not proof of a consolidated operating group ^[33].

The company's self-authored profile gives a different date layer: it says operations began on 1 July 2001, and describes the business around safety and quality, professional efficiency and comfortable service ^[34]. The profile also describes national intercity service, online and voice ticketing, maintenance capability, parking management, city-bus service and a sightseeing-bus

division said to have been established in 2008 ^[34]. Its more-than-860-bus and more-than-96-route figures, together with an average daily passenger figure tied explicitly to 2005, are retained as a dated historical snapshot rather than a current fleet census ^[34].

San Chung Bus Co., Ltd. — Taipei operator profile — Company history and identity

Discussed on San Chung Bus Co., Ltd. — Taipei operator profile [[/bus/operators/sanchungbus-1b7yg2j/](#)] in the source page's "Company history and identity" section. ^[35]

Company history and identity

The operator's company profile dates its creation to 7 May 1968, when it began highway passenger transport with 20 vehicles ^[35]. It says the business added tour-bus rental in 1970, joined Taipei's joint-operation bus system on 30 April 1977, and received approval in 1996 to operate the Taipei–Hsinchu intercity route ^[35]. A government employment record gives the company a different establishment date, 2 April 1968, while agreeing on the legal name 三重汽車客運股份有限公司, representative 李博文 and business number 35025506 ^[36]. Both dates are published here because they are different records, not because one has been silently treated as definitive ^[35] ^[36].

The same government record lists NT\$190 million in capital, 1,300 employees and highway passenger transport plus large-bus rental as the business categories ^[36]. The Highway Bureau's operator directory lists 三重客運 at the Sanhe Road address and gives 02-29882133 ^[37]. The TDX pull remains the source for this page's municipality label and generated route associations; it does not establish ownership, a parent company, fleet models or contract history ^[38].

Shin-Shin Bus Co., Ltd. — New Taipei operator profile — Company history and ownership transition

Discussed on Shin-Shin Bus Co., Ltd. — New Taipei operator profile [\[/bus/operators/shin-shin-bus-ooqycq/\]](#) in the source page's "Company history and ownership transition" section. ^[43]

Company history and ownership transition

Shin-Shin's official company page says the business was jointly established in ROC year 58, January 1969, by Yulon Motor, Rongqiao and the Veterans Affairs Council ^[43]. Taipei PTO's history separately records the late-1960s expansion of private operators and the 1977 joint-operation system, providing public-transport context without replacing the company's own founding account ^[44]. The operator page also says Yulon's shareholding was transferred in batches in July 2015 and acquired by the Chung Hsing and Capital groups ^[43]. That is an operator-published ownership-history statement, not a substitute for a current share register.

The MOEA record identifies 欣欣客運股份有限公司 as unified business number 18739212, with paid-in capital of NT\$519,002,790, representative 張元勳 and a registered address on Tingzhou Road in Taipei's Zhongzheng District ^[45]. MOEA gives 18 May 1969 as the approved establishment date ^[45]. The operator's January founding statement and the statutory May date are retained together because they describe different dated records.

Shin-Shin Bus Co., Ltd. — Taipei operator profile — Company history and ownership transition

Discussed on Shin-Shin Bus Co., Ltd. — Taipei operator profile [\[/bus/operators/shinshinbus-2fom1y/\]](#) in the source page's "Company history and ownership transition" section. ^[46]

Company history and ownership transition

Shin-Shin's official company page says the business was jointly established in ROC year 58, January 1969, by Yulon Motor, Rongqiao and the Veterans Affairs Council ^[46]. Taipei PTO's history separately records the late-1960s expansion of private operators and the 1977 joint-operation system, providing the public-transport context without replacing the company's own

founding account ^[47]. The operator page also says Yulon's shareholding was transferred in batches in July 2015 and acquired by the Chung Hsing and Capital groups ^[46]. That is an operator-published ownership-history statement, not a substitute for a current share register; the page does not establish a statutory parent after that transaction.

The MOEA record identifies 欣欣客運股份有限公司 as unified business number 18739212, with paid-in capital of NT\$519,002,790, representative Zhang Yuan-xun and a registered address on Tingzhou Road in Taipei's Zhongzheng District ^[48]. MOEA gives 18 May 1969 as the approved establishment date ^[48]. The operator's January founding statement and the statutory May date are retained together because they describe different dated records.

Taoyuan Bus — New Taipei TDX operator record — Fleet record and electric-bus history

Discussed on Taoyuan Bus — New Taipei TDX operator record [[/bus/operators/taoyuanbus-2ov8j/](#)] in the source page's "Fleet record and electric-bus history" section. ^[49]

Fleet record and electric-bus history

The 2014 Environmental Protection Administration report records a joint electric-bus observation event at Taoyuan Bus's Taoyuan terminal and says Taoyuan County had operated a free electric demonstration between Taoyuan railway station and the county government since 2012 ^[49]. That report says 45 electric buses and ten electric routes were operating county-wide at the time, including city routes and Daxi routes; it does not identify all 45 as Taoyuan Bus vehicles or provide a model roster ^[49].

The Highway Bureau's open-data catalogue is narrower and newer: its dataset was updated 29 May 2025 and lists 桃園客運 under local-government code 68000000 with brand 華德 and 15 licensed vehicles ^[50]. The 2014 county-wide total and the 2025 company/brand row are not added together: they have different dates, geography and units of measurement ^[49] ^[50]. Neither fetched primary record names a chassis, body, capacity, specific model designation, hybrid vehicle, or complete current fleet, so those fields remain TBC ^[49] ^[50] ^[51].

Kaohsiung regional buses — Electric buses — three citywide counts, three different dates

Discussed on Kaohsiung regional buses [</bus/regional/kaohsiung/>] in the source page's "Electric buses — three citywide counts, three different dates" section.^[52]

Electric buses — three citywide counts, three different dates

No single reconciled figure exists; this site publishes all three rather than picking one. **10 April 2018**: 77 electric buses across seven private operators — 港都客運 50, 南台灣客運 14, 高雄客運 11, 漢程客運 2^[52]. **6 May 2022**: a city government publication states 195 electric low-floor buses out of roughly 1,000+ total city buses, 19% — described as the first among Taiwan's major cities^[53]. **A higher, unverified figure**: search results describe up to 130 electric buses at 港都客運 alone, called "全國第一" (first nationally) by a business magazine — this site could not fetch that article (HTTP 403 on every attempt, including an AMP variant) and does not publish the figure as fact. The same 2022 publication profiles a Foxtron Model T [</bus/models/model-t-electric/>] bus in service on Route 24, with a stated 80%-charge time of two hours, though it does not name which operator runs that route^[53].

Kaohsiung regional buses — Conflicts and gaps

Discussed on Kaohsiung regional buses [</bus/regional/kaohsiung/>] in the source page's "Conflicts and gaps" section.^[54]

Conflicts and gaps

The 197-route municipal index and the 316-record TDX snapshot are both published values, but the fetched sources do not define a common counting unit: the index is a public route list while TDX includes separately identified route records and branch/service variants.^[54]^[55] The page therefore publishes both and leaves the reconciliation TBC. A historical route-change series, current route-level timetable history, fleet allocation, depot assignment, reliability, route-level ridership and a complete accessibility inventory also remain TBC because the fetched primary pages and structured responses do not supply those fields.^[55]^[56]^[57]^[58]

Taichung regional buses — Conflicts

Discussed on Taichung regional buses [</bus/regional/taichung/>] in the source page's "Conflicts" section.^[59]

Conflicts

台中客運's own site gives two different depot/station lists: its About page names roughly eight facilities^[59], its separate Stations page names twelve, including a transfer station and a 秋紅谷 site the About page omits^[60]. Both are the operator's own primary pages; neither explains the discrepancy, and this site publishes both rather than merging them.

The route-map dataset warns that its compiled publication can lag actual operations, while the citybus interface directs passengers to dynamic information or operator schedules for actual departures.^[61]^[62] These sources measure different publication layers, so the JSON retains route identity and stops but does not turn them into a frequency claim.^[61]^[63]

The full CSV contains 23 raw operator-label values, while the visible operator-link group on the citybus page presents 14 labels.^[63]^[62] The first is a count of labels attached to route records and the second is a portal link list; neither is treated as a legal-company count.^[63]^[62]

The city-bus CSV has no departure-time field, while the separate 小黃公車 page describes 26 services with fixed departure times and linked image schedules.^[63]^[64] The two values belong to different networks and publication formats, so the Yellow timetable is kept in its own data-layer object.^[64]

Tainan regional buses — Operators — a network that keeps changing hands

Discussed on Tainan regional buses [</bus/regional/tainan/>] in the source page's "Operators — a network that keeps changing hands" section.^[65]

Operators — a network that keeps changing hands

Tainan [</rail/thsr/stations/tainan/>]'s city-bus operator roster has been actively reshaped by tender through the 2020s, unlike Taipei's stable joint-operation group^[65]. 興南客運 (Shing Nan Bus) is the oldest, tracing to 台灣輕鐵株式會社 (1921) and a 1941 merger into 興南乘合自動車株式會社^[66]. 新營客運 (Xinying Bus), formally established January 1950, joined the Tainan system in a first batch of 44 transferred highway routes — sources disagree on whether that was 2011 or 2012^[67]. 府城客運 (Fucheng Bus) is younger and structurally distinct: founded 2013 as a subsidiary spun off from **Kaohsiung Bus** (高雄客運, also documented on this site's Kaohsiung page [</bus/regional/kaohsiung/>]) specifically to give Tainan a dedicated city-bus brand, after the original, differently-owned 台南客運 stopped running city routes in 2003^[68]. 漢程客運 (Han-Cheng Bus), founded 2013 in Kaohsiung as part of the same 台灣愛巴士 交通聯盟 alliance as 巨業交運/巨業交通, expanded into Tainan in December 2019 as its fourth operator^[69].

Route 77 traces a small chain of hand-offs that is itself informative. Launched 2016 as Tainan's first electric-bus route, it passed from its original operator to 府城客運 and then, from 10 April 2023, to 漢程客運 — the same 40 daily trips and alignment carried through each transfer^[70]. A **2024-08-21 network reorganisation** awarded 巨業交通 nine routes (existing and new, first batch targeted for Q4 2024) and 統聯客運 ten routes, making 統聯客運 Tainan's sixth operator from **3 January 2025**^[65] — after the TDX snapshot above was retrieved, so that operator may not yet appear in the committed route/operator records.

Tainan regional buses — Conflicts

Discussed on Tainan regional buses [</bus/regional/tainan/>] in the source page's "Conflicts" section.^[67]

Conflicts

新營客運's own zh.wikipedia article and the separate 大台南公車 overview article disagree on the year it joined the Tainan network — 2011 in one, 2012 in the other, describing what appears to be the same 44-route transfer^[67]. Neither is independently corroborated against a Tainan city government primary source; both are published rather than picked.

Tainan regional buses — Gaps and conflicts

Discussed on Tainan regional buses `[/bus/regional/tainan/]` in the source page's "Gaps and conflicts" section.^[71]

Gaps and conflicts

The route and stop datasets provide current structure, but not a historical route-change log, reliability series, depot allocation, vehicle assignment or accessibility inventory.^{[71] [72] [73]} TDX provides route and stop update timestamps, while the ridership catalogue provides annual route totals; neither is a complete timetable history.^{[74] [75]} The city portal and the 小黃公車 Q&A are therefore retained as the service-information boundary, and any timetable or route change should be refreshed from those sources before publication.^{[76] [77]}

The official sources disagree on the current 小黃公車 count. The Q&A page says 52 routes across 32 administrative districts, while the 5 August 2026 expansion notice says that adding 黃3, 黃16 and 黃23 increased the total from 46 to 49 routes across 31 districts.^{[77] [78]} These may be different publication snapshots or scopes, but the fetched sources do not explain the difference. The data layer preserves the Q&A table's 52 unique route names and reports the notice's 49 separately; it does not average them or choose a winner.^{[77] [78]}

BR20 B / 棕20預 — Classification and conflict

Discussed on **BR20** B / 棕20預 [/bus/routes/colour-brown/brown-20-bgsxaf/] in the source page's "Classification and conflict" section.^[79]

Classification and conflict

The official catalogue places 棕20 under 捷運棕線接駁公車.^[79] TDX has a separate normalized record 棕20預, while the full official page describes reservation-only 美堤碼頭 detours without publishing that separate label.^[80] The two values are retained.^[81]

The confirmed outbound stop sequence in this separate TDX record runs from 行善行愛路口, past 新湖行善路口/濱江國中/外雙溪(至善), ending at 故宮博物院(正館); the return working ends at 行善石潭路口 rather than the outbound origin.^[81] One confirmed interchange is recorded in the curated stop-ID join set: Jiannan Rd. (**BR15**), the same single station confirmed for plain 棕20.^[81] This record carries 2 subroutes under a single operator, 大南汽車, distinct from plain 棕20's own 4-subroute TDX record.^[81] The outbound working covers 19 stops and the return, ending at 行善石潭路口 rather than the outbound origin, also covers 19 — an asymmetric loop rather than a there-and-back working over the same stop set.^[81] Whether this separately filed record represents a distinct scheduled service or is simply TDX's own alternate encoding of plain 棕20's reservation-only detour was not established by any source checked for this entry.^[81]^[80] Both endpoints, 行善行愛路口 and 故宮博物院(正館), match plain 棕20's own published outbound termini exactly.

BR7G / 棕7綠野香坡 — Classification and conflict

Discussed on BR7G / 棕7綠野香坡 [/bus/routes/colour-brown/brown-7-ssatjm/] in the source page's "Classification and conflict" section.^[82]

Classification and conflict

The official 大臺北公車 catalogue lists 棕7綠野香坡 under 捷運棕線接駁公車.^[82] The TDX snapshot still identifies this record as 棕7綠野香坡.^[83] The full PDA page states: 「原【812】路線自115年6月30日起, 縮駛至『捷運橫溪站』並調整路線番號為『三鶯2線』」.^[84] Both values are retained; the

identity is unresolved — the PDA statement describes route 812 being shortened and renumbered to 三鶯2線, a different identity from 棕7綠野香坡, and this search found no primary source connecting that 812 renumbering to this specific 棕7 stop-pattern record.

The confirmed outbound stop sequence in the current TDX record runs from 伴山別墅(一), past 伴山別墅(二)/碧潭橋頭, ending at 市政府(市府)/捷運市政府站.^[83] Two confirmed interchanges are recorded in the curated stop-ID join set: Taipei City Hall (**BL18**) and Muzha (**BR02**), the same pair confirmed for plain 棕7.^[83] The route runs 2 subroutes under a single operator, 臺北客運, matching plain 棕7's own operator despite the unresolved identity conflict above.^[83] The outbound working covers 55 stops, longer than either plain 棕7 (47) or 棕7建業路; the return, starting from 消防局(松仁), covers 54.^[83] Whether that longer stop count reflects the 綠野香坡 (Green Fields) residential detour named in the identity, or the possible 812/三鶯2 renumbering above, was not established by any source checked for this entry.

- Corridor decision: TBC.
- Unusual branch or short working: TBC.
- Operator changes: TBC.

R68B / 紅68預 — Classification conflict

Discussed on R68B / 紅68預 [</bus/routes/colour-red/red-68-hdun1/>] in the source page's "Classification conflict" section.^[85]

Classification conflict

The committed TDX snapshot contains a colour-red record named 紅68預, which is why this page exists.^[85] The full official catalogue lists 39 labels under 捷運紅線接駁公車 and omits 紅68預.^[86] The full official schedule page is labelled 紅68 and records appointment-only trial workings within that service; it does not name a separate 紅68預 route.^[87]

Despite the classification conflict, the TDX-only record does carry its own confirmed stop sequence and curated interchange: from 洲美里, past 洲美街219號/洲美國小/福美站/三王宮, through 福美承平路口, and on the outbound working past 遠雄商舟大樓/中鼎第二總部大樓, ending at 捷運芝山站(福華).^[85] One confirmed interchange is recorded in the curated stop-ID join set: Zhishan (**R17**), matching the route's own terminus and identical to plain 紅68's own confirmed

interchange.^[85] The stop sequence is otherwise near-identical to plain 紅68's own, differing only in whether the 中鼎 第二總部大樓 detour is included — the same detour the schedule page's own appointment-only note describes.^[85]

108 / 108 — Classification and corridor

Discussed on 108 / 108 [</bus/routes/series-100s/108-hvewbe/>] in the source page's "Classification and corridor" section.^[88]

Classification and corridor

The official catalogue lists 108 under 一般公車, as a separate routeid entry from its 108區 shuttle variant.^[88] Its full schedule page gives service span weekday and holiday 0700–1730, headway weekday 30–40 minutes and holiday 20–30 minutes at both peak and off-peak, a single-section fare (一段票), and 大都會客運陽明山站 as the service contact.^[89]

The schedule page's own 起迄站名 field names the same stop, 陽明山公車總站, on both sides, which reads as a loop starting and ending at the Yangmingshan bus terminal.^[89] A community wiki instead describes the route as running from 陽明山 to a different terminus, 擎天崗 (起點站為陽明山，終點站為擎天崗), not as a loop.^[90] This is a direct conflict between a primary field and a secondary description; both values are published here and neither is picked.

The confirmed stop sequence never leaves Yangmingshan National Park: from the Yangmingshan bus terminal it calls at the park's own visitor infrastructure — the park headquarters, Yangmingshuwu (the former presidential retreat), the Xiaoyoukeng service station, Menghuan Lake and Lengshuikeng — before returning via the Qingshan recreation area.^[91] No stop on either direction is named for an MRT station, and the curated stop-ID join set carries no confirmed MRT connection for this route at all — a rider transfers to it at the mountain-top terminal itself, not partway along an urban corridor.^[91]

950 / 950 — Conflicts

Discussed on 950 / 950 [</bus/routes/series-900s/950/>] in the source page's "Conflicts" section.^[92]

Conflicts

The primary press release states 28 fixed daily trips and weekday hours 0600–2200 at the 2014 launch.^[92] The official schedule page, fetched directly, lists 17 daily departures running 0600–2000.^[93] Both figures describe route 950, but the schedule page's departure count and end time are lower than the launch-day press release's; TDX records three separate subroutes under 950 (950路, 950去程半, 950返程半), so the two figures may be counting different subsets of the route's workings rather than disagreeing about the same one.^[94]

Green Island ferry services — Operators — a genuine count conflict

Discussed on Green Island ferry services [</ferry/routes/green-island/>] in the source page's "Operators — a genuine count conflict" section.^[95]

Operators — a genuine count conflict

The scenic-area administration's own contact page names four ferry brands serving Green Island: Kaixuan (凱旋), Green Island Star (綠島之星), Uranus (天王星) and Golden Star/Hengxing (金星、恆星).^[95] Several other sources — including two of the operators' own sites and a booking aggregator — describe only three companies as running the actual pooled, scheduled service: Kaixuan (registered as Farnlin Shipping, 帆利航運), Green Island Star (registered as Long Hong Shipping, 龍鴻航業) and Uranus (registered as Changjie Shipping, 長杰航運, whose new vessel Tianwangxing 21 began sailing 28 March 2025).^[96] No operational detail for Golden Star/Hengxing was found in any source beyond a phone number on the administration's own contact list. Both counts are published here rather than one being picked.

The administration's page separately lists two different phone numbers for Uranus across its two hosted pages (089-281617 on the general ferry page, 089-281618 on the Green Island subsite), and assigns that same 089-281618 number to Golden Star/Hengxing on the subsite while the general page gives Golden Star/Hengxing a third number, 089-281477.^{[95] [97]} Neither discrepancy is resolved here.

Orchid Island ferry services — Crossing time: a genuine spread, not one number

Discussed on Orchid Island ferry services [</ferry/routes/orchid-island/>] in the source page's "Crossing time: a genuine spread, not one number" section.^[98]

Crossing time: a genuine spread, not one number

Sources disagree substantially on the Fugang–Orchid Island crossing time, and this page publishes the spread rather than picking one. Taitung County's own tourism page states 120 minutes.^[98] Dafa Steamship's own operator page states about 150 minutes for the same route.^[99] The East Coast National Scenic Area Administration's page gives "about 2-3 hours."^[100] A booking aggregator separately reports 150 minutes outbound and 200 minutes on the return leg when the return is routed via Green Island. For the Houbihu–Orchid Island leg, Taitung County's page gives "120-150 minutes," roughly consistent with a private portal's "about 2 hours."^[98]^[101] None of these figures is treated as more authoritative than another; the range itself is the finding.

Penghu island ferry services — What remains date-sensitive

Discussed on Penghu island ferry services [</ferry/routes/penghu/>] in the source page's "What remains date-sensitive" section.^[102]

What remains date-sensitive

The county's live page is the source for the displayed 26 August–1 September week, while the ticket guidance is an effective-date document from July 2025; neither should be read as a permanent timetable.^[102]^[103] The live page and the older ticket PDF also publish slightly different wind threshold values: the live page gives 15.6, 13.6 and 10.5 m/s for its named service groups, while the PDF's table displays 15.5, 10, 10 and 13.5 m/s across its service columns.^[102]^[103] The headings in the PDF's extracted text do not expose a clean one-to-one mapping for every column, so the values are reported as a dated source conflict rather than reconciled by guesswork.

The Taiwan Railways Changhua–Minxiong Double Track — One historical double-track record

Discussed on The Taiwan Railways Changhua–Minxiong Double Track [/rail/history/changhua-minxiong-double-track/] in the source page's "One historical double-track record" section. ^[104]

One historical double-track record

Taiwan Railways' full construction-history table lists Changhua–Minxiong as a 71.7 km double-track segment. ^[104] The table gives 1957 as the construction year and 1970 as the operation-start year, with Taiwan Railways Administration listed as the constructor. ^[104] Its explanation is 添築雙線, rendered by the operator as "Extended to be double-tracked." ^[104]

The full operator PDF repeats the same segment and values in its row 43, so the HTML table and PDF are two presentations of the same primary construction record, not two different measurements. ^[105] This page therefore treats 71.7 km as the operator's historical construction-table scope. It does not turn the row into a separate present-day line, and it does not infer that the table's operation-start field supplies an exact commissioning date. ^[104] ^[105]

The Taiwan Railways Chiayi–Xinshi Double Track — One historical double-track record

Discussed on The Taiwan Railways Chiayi–Xinshi Double Track [/rail/history/chiayi-xinshi-double-track/] in the source page's "One historical double-track record" section. ^[106]

One historical double-track record

Taiwan Railways' full construction-history table lists Chiayi–Xinshi as a 50.1 km double-track segment. ^[106] The table gives 1957 as the construction year and 1970 as the operation-start year, with Taiwan Railways Administration listed as the constructor. ^[106] Its explanation is 添築雙線, rendered by the operator as "Extended to be double-tracked." ^[106]

The full operator PDF repeats the same segment and values in its row 44, so the HTML table and PDF are two presentations of the same primary construction record, not two different measurements. ^[107] This page therefore treats 50.1 km as the operator's historical construction-

table scope. It does not turn the row into a separate present-day line, and it does not infer that the table's operation-start field supplies an exact commissioning date.^[106]^[107]

The Circular Line's 0403 earthquake — What is disputed

Discussed on The Circular Line's 0403 earthquake [</rail/history/circular-line-0403-earthquake/>] in the source page's "What is disputed" section.^[108]

What is disputed

BES's own statement says the damaged section was between its **Y12** Qiaohe and **Y14** Banxin engineering labels and that the contractor followed the approved drawings.^[108] BES says the upper and lower bearing arrangements both had milled-through slope plates but only the upper support failed; it therefore argues that the milling-through detail and bearing failure were not the main cause, and that the design strength and unequal seismic demand require further examination.^[108]

That position conflicts with the Control Yuan's finding that the work did not follow the drawings and that the pin's loss of the shear interface was the failure mechanism.^[109] The sources on this page establish the competing positions, not a final court determination. The full court merits judgment, final settlement and current responsibility allocation remain TBC.

The repair itself added permanent unseating-prevention and uplift-restraint devices as a second line of defence, while replacing the pot-bearing facilities and restoring track, cables and other systems.^[110] That is the published remedy; it does not by itself decide which party's explanation of the original cause will prevail.

Forestry railways beyond Alishan — Records still missing

Discussed on Forestry railways beyond Alishan [/rail/history/forestry-railways/] in the source page's "Records still missing" section.^[111]

Records still missing

Baxianshan's gauge is not established by any source found. Its logging-closure year is not established either — 1963 and 1965 are two different values from two different pages of the same government department, contradicting each other. Its recreation-area opening year is likewise not established between the same department's own conflicting 1986 and 1988 pages. Taipingshan's true network-length total is not established — 100-plus km across 16 lines and 68.01 km across seven lines are two different published counts. The year the 見晴線 trail conversion took place is unverified. No cultural-heritage registration for Taipingshan's surviving Maoxing Line infrastructure or diesel locomotives was found in this search — recorded as not found, not confirmed absent.^[111]

Sources for this entry

- Baxianshan National Forest Recreation Area (park page) [https://www.forest.gov.tw/0000186] — primary; Forestry and Nature Conservation Agency (林業及自然保育署); accessed 2026-08-29.^[111]

Metro incidents and service disruptions — Conflicts and gaps

Discussed on Metro incidents and service disruptions [/rail/history/incidents/] in the source page's "Conflicts and gaps" section.^[112]

Conflicts and gaps

DORTS technical-book no. 29 p. 87 labels Nari 「民國90年9月6日」, while DORTS technical journal no. 46 p. 214 gives 「民國90年9月17日」.^{[112] [113]} Both dates are published here; no fetched primary reconciles them.^{[112] [113]}

The Control Yuan and New Taipei DORTS count eleven Circular Line displacement locations, while NTMC's reopening release counts nine spans repositioned. The sources appear to count different things, but no fetched primary explicitly maps eleven locations to nine spans, so this page does not choose between them.^{[114] [115] [116]}

The complete station-by-station identity of the 16 flooded stations is **TBC**; the fetched DORTS pages name only examples. The exact station, date and vehicle details of the 1993 Wenhua testing incident remain TBC, as do the formal investigations behind the incoming lead-only events whose full primary pages could not be fetched.

The Matra dispute — Two disputes, not one

Discussed on The Matra dispute [/rail/history/matra-dispute/] in the source page's “Two disputes, not one” section.^[117]

Two disputes, not one

The delay claim, 1988–2005. Matra sued for the cost of a contract that ran years longer than it was written for, because the civil works its equipment depended on were late — the claim arises, in 自由時報's words, 「因土木工程部分包商施工延誤，連帶造成馬特拉的工期延長，增加成本費用」^[117]. This is the dispute that went to arbitration in 1993 and was still before the Supreme Court in 2005^[117]. It is about money and contract law, and **Matra won it**^[117].

The withdrawal, 1996–97. After the line opened, Matra pulled its technical staff out of Taiwan and stopped maintaining the system^[118]. This is the dispute everybody remembers — the one that produced the most famous sentence said about the Taipei Metro [/rail/operators/trtc/], and the one that steered the procurement that followed.

They are connected: the withdrawal happened because the delay claim had poisoned the relationship. But they are not the same event, and the NT\$1.64 billion that circulates belongs to the first, not the second^[117].

Coal and mineral mining railways — The Pingxi Line began as a private colliery railway

Discussed on Coal and mineral mining railways [/rail/history/mining-railways/] in the source page's "The Pingxi Line [/rail/tra/lines/pingxi-line/] began as a private colliery railway" section.^[119]

The Pingxi Line began as a private colliery railway

What is now TRA's Pingxi Line began as 石底線, a private railway built to move coal out of the Shidi coalfield. In June 1918, 顏雲年, who held two of the coalfield's mining rights, joined with the Japanese trading house 藤田組 to form 臺北炭礦株式會社 and build a railway once wartime raw-material prices made the investment worthwhile; construction began in January 1919.^[119] 藤田組 withdrew after the post-WWI economic downturn, and Yan Yunian bought out its stake, bringing in further investors and reorganising the enlarged company as 臺陽礦業株式會社 in 1920.^[119] Sources disagree by a year on when the line was finished: an encyclopedia account gives July 1921, while an independently fetched enthusiast history gives July 1922.^{[119] [120]} Both are published here rather than resolved. The colonial government purchased the line in 1929, relieving Taiyang Mining's cash-flow problems and renaming it 平溪線 under the Railway Bureau — the exact day and purchase price given in some secondary accounts rest on a citation this research did not independently verify.^[120]

A separate, later, and unrelated operation also carries the Pingxi name: 新平溪煤礦 (New Pingxi Coal Mine) at Shifen, now preserved as a museum with its own narrow-gauge electric mining train. Its own 1965 opening and 1997 closure dates are unverified in this research, sourced only to a search summary rather than a fetched page. It is a different company and a different mine from the 1918-1929 石底線/臺陽礦業 story above, not established by any source found to be connected to it.

Coal and mineral mining railways —

Jinguashi: two railways, one popular name

Discussed on Coal and mineral mining railways [/[rail/history/mining-railways/](#)] in the source page's "Jinguashi: two railways, one popular name" section.^[121]

Jinguashi: two railways, one popular name

Japanese merchant 田中長兵衛, through 田中組, and separately 藤田組, obtained mining rights at Jinguashi for gold and copper extraction.^[121] 金瓜石礦山株式會社, established in 1925, built a light railway connecting Jinguashi to Ruifang, completed in 1931.^[122] Nippon Mining (日本礦業株式會社) purchased the Jinguashi mining rights in 1933 and expanded processing facilities, including the 十三層 ore-flotation plant.^{[122] [121]}

The name "金瓜石線" is used by different sources for two different railways. The National Central Library's digital archive applies it to the 1931 Jinguashi-Ruifang light railway described above.^[122] Wikipedia's dedicated article instead applies the same name to a separate, later 762 mm industrial line running from 水湳洞 through 煥子寮 and 深澳 to the port at 八尺門, completed in 1936 and measured at 12.0 km with five stations as of a 1953 survey — a line the National Archives Administration independently corroborates under the alternate name 水八鐵路, carrying ore to the port for shipment.^{[123] [121]} This line's passenger service ended in August 1962 due to deteriorated track.^[123] Both usages of "金瓜石線" are published here without picking one as correct.

Postwar, mining continued under 臺灣金屬鑛業股份有限公司 (Taiwan Metal Mining Co.), formed in 1955.^[121] Sources disagree on when mining at Jinguashi finally ended — two sources agree independently on 1987, but a third gives 1985 under a differently named company (臺灣金礦公司), and this research could not determine whether that is the same entity operating under an inconsistent name or a genuinely separate closure event.

Coal and mineral mining railways — Houtong: a station, then a mine, then a museum

Discussed on Coal and mineral mining railways [\[/rail/history/mining-railways/\]](/rail/history/mining-railways/) in the source page's "Houtong: a station, then a mine, then a museum" section.^[124]

Houtong: a station, then a mine, then a museum

Houtong Station opened on 27 January 1920 as part of the Yilan Line.^[124] The Ruisan coal-preparation plant nearby was completed in March 1922, originally under Mitsui zaibatsu operation; Mitsui later abandoned the site believing reserves exhausted, and in 1934 李建興 and his brothers leased the workings, forming what was formally registered on 15 November 1954 as 瑞三鑛業股份有限公司.^[125] The company became Taiwan's largest single coal producer, with a cumulative 1946-1980 output of 6,741,118 tonnes — reported as 5.23% of national production over that span, a figure not directly comparable to a separate broadcaster's claim that the mine supplied "one-seventh" of Taiwan's coal at its single-year peak, since the two describe different measurement periods.^[125] The mine closed on 1 May 1990, following declining economics and three fatal disasters in 1984.^[125]^[126] The preparation plant and coal-transport bridge were registered as historic buildings on 7 November 2005; the wider site was named and opened as 猴硐煤礦博物園區 (Houtong Coal Mine Museum Park) on 24 July 2010, and the Ruisan plant itself reopened after restoration in September 2022, with a second restoration phase that broke ground on 21 October 2024, targeted for completion in 2026.^[126]

The Taiwan Railways Old Mountain Line — Heritage status and today's rail bike

Discussed on The Taiwan Railways Old Mountain Line [\[/rail/history/old-mountain-line/\]](/rail/history/old-mountain-line/) in the source page's "Heritage status and today's rail bike" section.^[127]

Heritage status and today's rail bike

Two of the 1938-era replacement iron bridges — 內社川鐵橋 (Neishechuan Iron Bridge) and the Yutengping replacement span — were designated Miaoli [\[/rail/thsr/stations/miaoli/\]](/rail/thsr/stations/miaoli/) County monuments, approved by the county's Tangible Cultural Assets Review Committee on 10 March 2019 and announced the next day, making them the corridor's fourth and fifth protected heritage

sites after Shengxing Station, Longteng Broken Bridge and Taichung's Taian Station.^[127] This page does not state the designation dates for Shengxing Station or Longteng Bridge themselves as established facts: they are reported by several secondary accounts, but the Ministry of Culture's own heritage database could not be read to confirm them directly (see Remaining gaps).

The old alignment briefly returned to scheduled service on 5 June 2010, with a steam-hauled heritage train running Sanyi to the former Taian station.^[128] Miaoli County Government has since redeveloped the corridor as 舊山線鐵道自行車 (Old Mountain Line Rail Bike), which the Tourism Administration describes as Taiwan's first rail-bike attraction, run under a "dynamic preservation" model rather than as a TRA passenger service.^[129] Sources disagree on exactly when the Rail Bike itself began operating, and this page does not pick between them.

Port rail connections — Kaohsiung, Keelung, Taichung — Taichung: the one port line still running, on a disputed birth date

Discussed on Port rail connections — Kaohsiung, Keelung, Taichung [</rail/history/port-rail-connections/>] in the source page's "Taichung: the one port line still running, on a disputed birth date" section.^[130]

Taichung: the one port line still running, on a disputed birth date

Taichung Port Station remains an active TRA station today, with a freight-consignment desk still listed on the operator's own current station page.^[130] The line itself is 7.8 km, but its origin date is genuinely disputed between two different TRA-adjacent sources: a Wikipedia article, uncited for this specific figure, gives an opening or operator-transfer date of 31 October 1976, while a TRA construction-history PDF — read directly for a separate piece of this project's research — lists the same line as built in 1973 and put into operation in 1974, and the current TRA HTML construction-history page omits the line entirely.^[131] ^[132] Both dates are published here without resolving which is correct. TRA's own 2024 social-media statement puts the line's annual freight volume at 202,000 tonnes — mostly wheat moved to flour mills at Fugang and Hsinchu [</rail/th-sr/stations/hsinchu/>], at roughly three round trips per day on the port line itself — within a

system-wide TRA freight total of 6.81 million tonnes that year.^[133] A separate, uncited claim on Wikipedia that this wheat traffic ended in June 2025 and was replaced by irregular energy-storage-container shipments from November 2025 could not be corroborated against any primary or independently written source in repeated searches, and is not published here as established.

Public art in the Taipei-region rail network — Conflicts and gaps

Discussed on Public art in the Taipei-region rail network [</rail/history/public-art/>] in the source page's "Conflicts and gaps" section.^[134]

Conflicts and gaps

Xiaobitan [</rail/metro/stations/g03a/>]'s work has three different primary-source figures. The general DORTS table gives NT\$1,000,000; the dedicated DORTS work record gives approximately NT\$35,900,000 plus a NT\$1,000,000 first prize; and the DORTS technical book says the project was constrained by a NT\$15,000,000 budget limit before the interior works were substantially reduced.^{[134] [135] [136]} The sources describe different scopes or stages, but do not reconcile them, so all three values remain published.

The Sanying sources also disagree. The 2025 announcement assigns 蘆花街燈 to **LB08** and 時光行旅 to **LB10**.^[137] The 2026 announcement omits the **LB08** label, assigns 時光行旅 and 陶鄉 to **LB10**, and calls the programme 12 works.^[138] The full **LB08** art record instead names 陶鄉 at **LB08**. The table preserves each value rather than choosing a station allocation.^{[137] [138] [139]}

The Daqiaotou [</rail/metro/stations/o12/>] page establishes eight platform-wall paintings but not the individual catalogue fields. The Airport MRT and Danhai operator pages likewise name works while leaving most catalogue fields unpublished. Those fields stay TBC; an unlisted station is not treated as proof that no work exists.^{[140] [141] [142]}

The Ten Major Constructions and the THSR BOT crisis — Six transport projects under one 1970s banner

Discussed on The Ten Major Constructions and the THSR BOT crisis [\[/rail/history/ten-major-constructions/\]](/rail/history/ten-major-constructions/) in the source page's “Six transport projects under one 1970s banner” section.^[143]

Six transport projects under one 1970s banner

Premier Chiang Ching-kuo announced the Ten Major Construction Projects (十大建設) in 1973, to be completed 1974-1979, in response to the 1973 oil crisis and infrastructure bottlenecks from a decade of rapid industrialisation.^[143] Six of the ten were transport projects: the Sun Yat-sen Freeway (Keelung to Kaohsiung, 373 km, completed 31 October 1978), railway electrification of the western trunk line (completed 27 June 1979), the North-Link Line connecting the eastern rail network to the western one (full operation from 1 February 1980), Taoyuan International Airport (opened 26 February 1979 as Chiang Kai-shek International Airport), Taichung Port, and Su'ao Port.^[143] The freeway's construction cost is reported with three different figures across the same secondary source — NT\$42.9 billion, "over NT\$40 billion," and NT\$44.8 billion — none of which this research traced to a primary government figure, so all three are published here rather than resolved.^[144] A separate full-page fetch of a popular history site, checked specifically because a search-engine summary had implied it documented a substantive motorway-versus-rail policy debate, found only a much thinner account: that Chiang overrode unspecified objections in 1970, with no named opponents and no cost comparison — an example of a search snippet outrunning what the underlying page actually supports.^[145] No source found in this research documents a contemporaneous, sourced debate over widening the existing rail/road corridor as an alternative to a new freeway alignment.

Red Line — Construction and opening chronology

Discussed on Red Line [</rail/krtc/lines/red-line/>] in the source page's "Construction and opening chronology" section.^[153]

Construction and opening chronology

The government's network history places the Red and Orange lines in the first stage of Kaohsiung's first-period MRT development plan, approved in ROC80, and says that the two routes were completed and opened in ROC97.^[153] KRTC's company history gives a more granular institutional chronology: the city invited private participation on 1 February 1999, the China Steel-led application was selected on 10 May 2000, the company received its licence on 28 December 2000, and the construction and development agreements were signed on 12 January 2001.^[154] KRTC records construction beginning in October 2001 and describes the concession as 36 years from the start of construction, comprising more than six years of construction before the Red and Orange lines entered service.^[154]

MTBU treats the Red and Orange network as one private-participation construction and operating project: its page gives six years of construction, 30 years of operation and a 36-year concession, with a planned 42.7 km and 38 stations, three depots and a total construction cost of NT\$183.963 billion.^[155] KRTC records the Red Line's regular service opening on 9 March 2008 and the Orange Line's opening on 14 September 2008; the latter date marks the full operation of the original cross-shaped network, not the first Red Line service.^[156]

The historical service-indicator document is a separate design snapshot. It describes a Red Line of 28.3 km, with 19.8 km underground and 8.5 km elevated, and 23 stations at the time of that document.^[157] The current government page reports 28.3 km and 24 Red Line stations, while the TDX route pull reports 29.72 km and its current sequence includes **R24** and RK1.^{[155] [158] [159]} Those values are retained as different dated or structured boundaries rather than made to agree by arithmetic.

Taoyuan Airport MRT — Planning and approvals

Discussed on Taoyuan Airport MRT [</rail/metro/lines/airport-mrt/>] in the source page's "Planning and approvals" section.^[160]

Planning and approvals

Sources disagree about when this line's history starts because different bodies mean different things by "planning." The first fully verified institutional milestone is the central government's October 1996 decision to build it as a BOT (build–operate–transfer) concession, and Long Life International Development Co. won that concession in 1998^[160]. The BOT model collapsed on 31 December 2002, when Long Life and the High Speed Rail Bureau agreed to terminate the contract^[160]. Government took over: MOTC designated the High Speed Rail Bureau as the project's builder on 28 October 2003, and the central government approved the construction plan on 9 March 2004^[161] ^[162].

Taoyuan Airport MRT — Construction history

Discussed on Taoyuan Airport MRT [</rail/metro/lines/airport-mrt/>] in the source page's "Construction history" section.^[162]

Construction history

Construction of the Sanchong–Airport– Zhongli section and its E&M systems formally started 27 February 2006^[162]; TYMC's own history page instead marks 26 June 2006, the date of a ceremonial groundbreaking presided over by the Premier^[161] — two different milestones in the same year, not a contradiction. DORTS records that Taipei rejected the originally elevated Sanchong–Taipei section on urban-design and land-use grounds; Taipei City agreed to fund the

extra cost of underground construction, and that section formally started on 25 September 2006 after its design and construction were assigned to DORTS^[162]. The detailed design ran from March 1998 through 2002, according to the same project chronology^[162].

The opening date itself moved repeatedly. The earliest announced target was January 2009; by March 2016 it had changed six times^[163]. The fetched report gives that count but not a complete dated list of each change. The line finally opened **2 March 2017**^[164]^[162]. TYMC's chronology records the 99% system-stability test on 20 November 2016, Ricardo's safety certification on 2 December, initial inspection on 3–4 December, final inspection on 29–30 December, the operating permit on 25 January 2017 and trial service from 2 February^[161].

Taoyuan Airport MRT — Engineering and contract disputes — two figures confirmed, a widely repeated total not found anywhere

Discussed on Taoyuan Airport MRT [</rail/metro/lines/airport-mrt/>] in the source page's "Engineering and contract disputes — two figures confirmed, a widely repeated total not found anywhere" section.^[165]

Engineering and contract disputes — two figures confirmed, a widely repeated total not found anywhere

The main electromechanical contract (ME01) went to a consortium led by the Japanese trading house **Marubeni** (丸紅), with Kawasaki Heavy Industries and Hitachi as named subcontractors. In January 2017, weeks before opening, the High Speed Rail Bureau announced it would impose a **NT\$2.5 billion delay penalty** — the contract's maximum, calculated at 0.05% of contract value per day of delay — and had already **withheld roughly NT\$1.9 billion in performance bonds**, over Marubeni's unauthorised subcontracting of the signalling system, which its contract required it to design itself, to a British firm^[165]. Marubeni's own counter-claim against the Ministry, seeking NT\$12.9 billion over repeated design changes, was reported in the same account^[165]. Both of the Bureau's figures were independently corroborated by two further contemporaneous reports naming the same amounts and the same reasons.

A combined "NT\$7.2 billion" total for this dispute circulates widely. NT\$2.5 billion plus NT\$1.9 billion is NT\$4.4 billion, not NT\$7.2 billion, and no primary or secondary source read for this page — not the three contemporaneous 2017 news accounts, not zh.wikipedia's own article on the line, which contains no Marubeni monetary figures at all — states a combined total of any kind. The NT\$7.2 billion figure appeared repeatedly in this research run's own search-engine result summaries, never inside a quoted source sentence, and in one case alongside an unrelated, later, and much smaller 2021 dispute — the Railway Bureau withheld NT\$726.93 million from Marubeni that year for missing express-train travel-time, speed and headway targets^[166] — that shares a leading digit and may be the source of the confusion. The two confirmed figures, and Marubeni's name, are published here on the strength of three independent contemporaneous accounts; the total is not, because it could not be found stated anywhere.

Taoyuan Airport MRT — Rolling stock

Discussed on Taoyuan Airport MRT [</rail/metro/lines/airport-mrt/>] in the source page's "Rolling stock" section.^[167]

Rolling stock

Two fleets, two manufacturers, sharing the same 1,435mm gauge and DC 750V third-rail supply^[167] ^[168].

The **express fleet (2000-type, purple)** is built entirely by **Kawasaki Heavy Industries**, delivered 2011–2013 for the 2017 opening: 11 five-car sets, 55 cars, each set four passenger cars plus a dedicated luggage car^[167]. Transverse seating, overhead luggage racks, WiFi and USB charging are fitted; wireless charging pads are noted in one source as currently suspended, rather than the always-on feature sometimes described^[167]. Capacity is around 855 per set, with 206 seats and eight wheelchair spaces^[167].

Inside an express (2000-type) train.

CHENG-EN CHENG FROM TAICHUNG CITY, TAIWAN, CC BY-SA 2.0, WIKIMEDIA COMMONS

The **commuter fleet (1000-type, blue)** was built under an industrial- cooperation arrangement: Kawasaki built the prototype set and three later sets (101, 118–120); the rest, sets 102–117, were assembled domestically by **Taiwan Rolling Stock Co.** (台灣車輛股份有限公司)^[168]. There are currently 20 four-car sets, 80 cars, with longitudinal seating for higher standing capacity^[168]. Per-set seating is 188 — one source's own summary prose describes this as "per car," which its own per-car table contradicts (44+47+50+44 seats across the four cars, summing close to 188), so this page publishes the per-set reading^[168].

Both fleets run at 100 km/h in service, with a 110 km/h design maximum^[167] ^[168].

Circular Line — Incident investigation and engineering findings

Discussed on Circular Line [\[/rail/metro/lines/circular-line/\]](/rail/metro/lines/circular-line/) in the source page's "Incident investigation and engineering findings" section.^[178]

Incident investigation and engineering findings

Read the report carefully and the first thing to notice is what is *not* a finding^[178]. Its terms of reference recite the allegation it was asked to look at — eleven suspected displacements, a repair initially costed at over NT\$400 million, at least a year to fix^[178]. Those are the reported claims the Control Yuan set out to test, not its conclusions, and they are quoted here as such.

The mechanism

The report's first finding is a construction fault, stated without hedging: the contractor, BES Engineering (中華工程), **did not build to the drawings**^[178]. It milled through the grade-adjustment plate (調坡板) that sits between the girder and the bearing, leaving void space above the locating pin; under the earthquake the pin jumped upward into that void, its base left the interface between the upper and lower plates of the pot bearing, and it lost its ability to resist shear^[178].

The numbers behind that sentence are the heart of the case^[178]:

DIMENSION	DEPTH
Milled recess, as shown on the contractor's own shop drawing	5 mm ^[178]
Milled recess, as measured on site by the investigation	41 mm ^[178]
Void left above the pin	36 mm ^[178]
Height of the pin itself	40 mm ^[178]

36 mm of void plus the 5 mm of engagement the drawing required is 41 mm — the report's own arithmetic — and 41 mm is more than enough to swallow a pin only 40 mm tall^[178]. The pins were found by the New Taipei City Civil Engineers Association, which jacked the damaged bridges up and discovered them lodged in the upper plate of the bearing or lying on the pier cap where they had fallen^[178].

The section was built under contract CF651B, part of the CF650 section works, and the structures carried a warranty running to 12 March 2026^[178] — which is why the timing of the claim against the contractor matters.

The shaking was smaller than the design case

This is the part most likely to be misread. The viaducts were designed to the Ministry of Transportation and Communications' 2006 railway bridge seismic design code, at a Taipei basin design ground motion of 0.24 g, with an importance factor of 1.2 because metro bridges are classed as important structures — so the minimum design seismic force is 0.288 g, which on the Central Weather Administration's 2020 intensity scale falls in the 6-weak band^[178]. The "designed for 6-weak" formulation is the report's own arithmetic on 0.24 g × 1.2 followed by a lookup on the 2020 scale, not a design document that says 6-weak^[178].

What the instruments recorded near the damaged bridges was smaller^[178]:

STATION	NORTH–SOUTH PEAK GROUND ACCELERATION
TAP026, 頂溪國小	224.60 gal ^[178]
TAP032, 積穗國小	206.77 gal ^[178]
TAP115, 安和國小	223.17 gal ^[178]

At 積穗國小 the peak ground velocity reached 32.16 cm/s, an intensity of 5-strong, and the peak horizontal acceleration measured there was 0.229 g — below the 0.288 g of the 475-year return-period design earthquake^[178]. New Taipei DORTS said the same thing three weeks after the earthquake: intensity 5-strong at the nearest recording station^[179].

The comparison the report itself draws is between seismic microzones rather than between metro lines. The adjacent zones — the DF111 contract range covering Wenshan and Xindian, and the DF113 range covering Sanchong, Xinzhuang [\[/rail/metro/stations/o18/\]](/rail/metro/stations/o18/) and Banqiao — recorded far lower ground motion in the same earthquake and suffered **no bridge damage at all**^[178]. In the DF112 range covering Zhonghe and Yonghe, horizontal peak ground acceleration was around twice its neighbours' and horizontal peak ground velocity around fifteen times^[178].

Which produces the single most quotable line in the document: 「也就是說，輸入比 規範要求小20%的地震，卻得到比預期大50%的力量，顯示出反應譜分析不能反映當地地震反應 的實況」 — an input earthquake 20% smaller than the code requires produced forces 50% larger than expected, showing that response-spectrum analysis does not reflect the local seismic response^[178].

The design, and what nobody checked

The report's second finding is against the design. The structure is described in it as **Taiwan's first stacked viaduct** — 國內史無前例的疊式高架橋 — carried on branching piers through climbing and descending sections, and the finding is that no higher design standard was adopted and no displacement-limiting devices were added to provide a further line of defence, and that this unprecedented structural form went through **no external structural review**^[178].

Note the word: viaduct, not station. Nothing found in the research behind this page describes stacked *stations*.

The structural engineers' report the investigation relied on sets out the hierarchy plainly: displacement-limiting devices assist the bearings and resist seismic force, and fall-prevention equipment or sufficient seat length prevents the span dropping — the second and third lines of

defence respectively for a bridge bearing system in an earthquake^[178]. The line was built with neither of the two backups.

Three further design failures are recorded^[178]:

- The detailed design consultant, CECI (世曦), **double-deducted dead load** when calculating the bearings' uplift design force, and so underestimated the required uplift resistance^[178].
- The pot-bearing detail drawing **contradicts itself about the pins**^[178]. Note 1 in its lower-left corner gives every pin a height of 40 mm with diameters of 120, 140, 150, 160, 200, 210, 220 and 280 mm; the table on the same drawing gives every pin a diameter of 100 mm with heights of 15, 20 and 25 mm; and neither set matches the pins actually found in the damaged bearings^[178]. The report's own word for this is 令人費解 — baffling.
- **Nobody senior signed that drawing**^[178]. Only the handling officer at Taipei DORTS's third civil works office stamped it; neither the design unit responsible for reviewing it nor DORTS as the approving authority signed at all, which the report finds is a failure to carry out the review and approval the contract's specification chapter on pot bearings required^[178].

888 pot bearings were supplied to the works in total, sampled in six batches against the production schedule and tested at National Taiwan University of Science and Technology's structural mechanics laboratory^[178].

The plate that nobody in Taiwan inspects

The third finding is the one most easily missed, and it is the reason the fault survived construction. The grade-adjustment plate is a secondary component between the girder and the bearing; it is designed by the contractor, assembled in the fabrication shop, and concealed once the girder is lifted into place — so it was **not an inspection hold point**^[178].

The investigation then checked whether it is one anywhere else, and found that it is not: not on the Directorate General of Highways' viaducts, not on the Hualien–Taitung railway works, not on the Tamkang Bridge, not on the Ankeng LRT, not on the Sanying Line, not on the Taichung Metro, not on the Wenhua Line, not on the second phase of the Wanda Line, and not in the Public Construction Commission's inspection checkpoints for steel bridge erection^[178]. Taipei DORTS's remedy, dated 13 December 2024 — the day after the line reopened — was to add a pot-bearing inspection flow chart and a sampling standard^[178].

The seismometer that was told not to report

The fourth finding concerns an instrument that was installed, worked, and was disconnected from anyone who could act on it. Zhongyuan station has triaxial accelerometer-type seismometers at both ends of its platform level^[178]. On 28 August 2019 Taipei DORTS's electrical and mechanical systems engineering office wrote to Taipei Rapid Transit Corporation that the seismometer detection signals need not be relayed to the control centre — and from the line's opening in 2020 to the date of the report, the Circular Line control centre held **no seismic record from that instrument at all**^[178].

The 2019 letter identifies the instruments by the codes **Y9** and **Y13**, which are not the codes the stations at those positions carry today; the two numbering schemes remain unreconciled, and the station the report names is Zhongyuan^[178].

The report also states as fact that when Taipei City Government handed operations to New Taipei City Government on 23 May 2023, New Taipei Metro took the equipment as it stood, and received training on the anemometer only — nothing on the seismic instrumentation^[178].

The code itself

The sixth finding is against the ministry. Through years of revision, including the substantially updated 2021 edition of the railway bridge seismic design code, MOTC has never addressed **transverse** displacement: the rules still deal only with the longitudinal, running direction^[178]. The line failed sideways.

Who was actually corrected

This is worth stating precisely, because the operator of the line and the builder of it are different cities and the two are easily transposed. The formal 糾正 — a correction, the Control Yuan's censure of an agency — was proposed against **Taipei City Government**, on findings one and three: the construction fault and the supervision gap^[178]. Taipei DORTS built the line and supervised its own construction^[178].

New Taipei City Government and MOTC received 函請檢討改進 — a request to review and improve, and report back — not a correction^[178]. Findings two and four went to Taipei City for review, finding four also to New Taipei City, and findings five and six to MOTC^[178].

Circular Line — Engineering responsibility and dispute

Discussed on Circular Line [</rail/metro/lines/circular-line/>] in the source page's "Engineering responsibility and dispute" section.^[180]

Engineering responsibility and dispute

On 3 January 2025 New Taipei City Government announced that the two city governments would jointly sue BES Engineering for **NT\$1.927 billion**, on the basis that the contractor had not built to the approved drawings; the same release carries the 40 mm pin, the 5 mm drawing and the 41 mm as-built account of the mechanism^[180]. The suit was filed on 27 March 2025 at the Taipei District Court^[181].

BES has not conceded. It says it 「均依核定施工圖說嚴格執行」 — that it strictly executed the approved construction drawings — and that the milled-through plate and the bearing failure are **not** the main cause of the damage, which it says needs further examination from the direction of structural design strength ^[182].

The litigation outcome, and whether any prosecution followed the Control Yuan's request that New Taipei DORTS pursue liability for public-danger offences ^[178].

Circular Line — Conflicts and measurement records

Discussed on Circular Line [</rail/metro/lines/circular-line/>] in the source page's "Conflicts and measurement records" section. ^[178]

Conflicts and measurement records

How many displacements, and how many spans

FIGURE	SOURCE	WHAT IT APPEARS TO COUNT
11 displaced steel box girders	Control Yuan ^[178] ; New Taipei DORTS ^[179]	Locations where a girder moved
9 spans of steel box girder repositioned	New Taipei Metro's reopening release ^[183] ; CNA ^[181]	Spans that had to be jacked back into place

Eleven displacement locations across nine spans is arithmetically possible, but the available records do not establish that mapping ^[178] ^[183].

How far the damage ran

The primary source is inconsistent with itself, and that is worth publishing rather than smoothing over. The Control Yuan's terms of reference and its opening paragraph put the damage between Banxin and Qiaohe and along the Jingping [\[/rail/metro/stations/y10/\]](/rail/metro/stations/y10/) Road section; the conclusion of its first finding gives the range as Banxin to Jingan; and its own breakdown, quoting New Taipei DORTS, places **five displacements between Qiaohe and Zhongyuan, five between Zhongyuan and Banxin, and one near Jingan** — five plus five plus one, spanning [Y15](#) down to [Y11](#), not [Y15](#) to [Y13](#) ^[178]. Jingping and Jingan are adjacent stations, and the report uses both names for the outlying eleventh location ^[178].

The service suspension was wider than the damage in either reading: Banqiao to Zhonghe could not operate ^[178].

How long the line is

FIGURE	SOURCE	WHAT IT MEASURES
15.4 km	Taipei DORTS ^[184] ^[185] and New Taipei DORTS ^[186]	The published route length of Phase 1, quoted identically by both bureaux
15.06 km	TDX cumulative chainage at Y20 ^[187]	Platform to platform, Y07 to Y20 — station to station, not the whole built alignment
0	TDX RouteLength ^[187]	Not published; the field is present and empty

The 0.34 km between the first two is the same shape as the result recorded on the Wenhua Line [\[/rail/metro/lines/wenhua-line/\]](/rail/metro/lines/wenhua-line/): chainage between end platforms is not the route length ^[184] ^[187]. The two values remain separate measurements ^[184] ^[187].

How long the finished ring will be

FIGURE	SOURCE	WHAT IT IS
49.31 km	arithmetic on Taipei DORTS's four published section lengths ^[185]	15.4 + 14.93 + 5.73 + 13.25, added up on this page — a sum, not a DORTS figure
49.18 km	zh.wikipedia's infobox ^[188]	The figure that circulates in English material; not traceable to a government page in this research
20.66 km for the South and North rings together	New Taipei DORTS ^[189]	Equals 5.73 + 14.93 exactly, so the two bureaux agree on the sections

The whole-ring total remains TBC: the fetched government pages publish section lengths, while the secondary 49.18-km figure is not corroborated by those pages ^[185] ^[189] ^[188].

Whose fault it was

Four positions, and they are not reconciled^{[178] [180] [182]}:

- **The contractor did not build to the drawings**, and milling through the grade-adjustment plate is the cause — Control Yuan's first finding, and New Taipei City Government's basis for the claim^{[178] [180]}.
- **The contractor denies it**, says it built strictly to the approved drawings, and says the plate and the bearings are not the main cause^[182].
- **The design was at fault** — no displacement-limiting devices, dead load double-deducted in the uplift calculation, drawings neither reviewed nor approved, no external structural review of an unprecedented structure^[178].
- **The supervision was at fault** — a concealed component with no inspection hold point^[178].

The Control Yuan apportions responsibility to contractor, designer, supervisor **and** the ministry's own code^[178]. The contractor rejects the first^[182]. The litigation filed in March 2025 has not been resolved on this page.

Sanying Line — Where the sources disagree

Discussed on Sanying Line [</rail/metro/lines/sanying-line/>] in the source page's "Where the sources disagree" section.^[190]

Where the sources disagree

Project cost. Three official values survive. The October 2014 early-works release gave **NT\$55.022 billion**.^[190] The April 2015 NDC-stage release and August 2018 engineering report gave **NT\$50.5 billion**; the report says value engineering used shorter trains, tighter headways, shorter stations, well foundations and U-girders to reduce the earlier NT\$55 billion proposal.^[191]^[192] The live builder page now gives **NT\$50.200 billion**.^[193] These are dated project estimates or current programme figures, not interchangeable measurements of final expenditure.

Journey and peak interval. In 2014 the city forecast an end-to-end journey of no more than **23 minutes** and a **three-minute** peak interval.^[190] Opening service was about **30 minutes** and **six minutes**.^[194] The engineering report's mature design pattern put LB01–LB08 at 2.2 minutes but LB08–LB12 at 4.4 minutes.^[192] The sources describe an early forecast, initial operations and a design-year branching pattern respectively; none is substituted for another.

Bade approval. The extension page's dated record says the Executive Yuan approved the comprehensive plan on 1 August 2025, while its introduction says the project has not been approved.^[195] The page gives no update date for the stale sentence, so its provenance cannot be reconstructed.

Songshan–Xindian Line — Length records and conflicts

Discussed on Songshan–Xindian Line [\[/rail/metro/lines/songshan-xindian-line/\]](/rail/metro/lines/songshan-xindian-line/) in the source page's "Length records and conflicts" section.^[196]

Length records and conflicts

The published distances use different project and operating boundaries, so the figures are retained with their source labels.

FIGURE	WHAT IT MEASURES	SOURCE
18.77 km	Operating length, G01 to G19 , the main line only	TDX <code>CumulativeDistance</code> ^[196]
21.3 km	zh.wikipedia's headline "operating length"	zh.wikipedia's infobox ^[197]
20.6 km (10.5 + 1.6 + 8.5)	DORTS's three project lengths added together	Xindian, Xiaonanmen [/rail/metro/stations/g11/] and Songshan project pages ^[198] ^[199] ^[200]
1.94 km	The Xiaobitan branch alone, separate from the above	TDX ^[196]

The Xindian technical-document page gives a different 10.55 km main project and 1.53 km branch, and the track article describes 11.2 km from CKS Memorial Hall to Xindian with a separate depot scope.^{[201] [202] [203]} Those figures cannot be silently substituted for the live TDX chainage; each remains labelled by its source and measurement boundary.^{[201] [202] [203]}

The branch therefore has a second explicit conflict: approximately 1.5 km in DORTS's route project, 1.53 km in the construction-management article, 1.9 km in the secondary branch account and 1.94 km in TDX.^{[198] [201] [204] [196]}

The Songshan project page calls 499.3億元 its construction budget.^[200] The Audit Office fragment instead reports a 530億4,206萬元 expenditure budget and 502億9,566萬元 audited final expenditure. These are different accounting labels, so no single unqualified "cost" is presented.^{[200] [205]}

Tamsui–Xinyi Line — Construction history

Discussed on Tamsui–Xinyi Line [\[/rail/metro/lines/tamsui-xinyi-line/\]](/rail/metro/lines/tamsui-xinyi-line/) in the source page's "Construction history" section.^[206]

Construction history

The Tamsui section came in three pieces, and DORTS records an inspection date against each^[206]:

SECTION	TRIAL INSPECTION	FINAL INSPECTION	OPENED
Tamsui–Zhongshan	12 Feb 1997	21 Mar 1997	28 March 1997 ^[206]
Zhongshan–Taipei Main	—	17 Dec 1997	25 December 1997 ^[206]
Taipei Main–CKS Memorial Hall	—	—	24 December 1998 ^[206]

DORTS calls the result 「國內第一條通車的高運量捷運系統」 — the first high-capacity metro line in Taiwan to enter service^[206]. The last of those three stretches was not built with the rest of the Tamsui line at all: the project record notes against both **R08** and **R09** that 「本站工程併入捷運新店線辦理」, the station works were folded into the Xindian line contract^[206].

The Xinyi section followed fifteen years later, inspected on 13 October and 8 November 2013 and opened on **24 November 2013**, against a budget of NT\$33.862 billion^[207]. Its seven-station count includes **R08** and **R05**^[207], both of which already existed on other lines — so a source giving a smaller number of stations "opened in 2013" is counting new stations rather than the project's, not contradicting it.

The whole thing descends from one decision: the Executive Yuan approved the initial network on 4 April 1986 with a total budget of NT\$444.4 billion, and the Tamsui line was let as 13 design contracts and around 120 construction contracts^[206]. The earliest of them is worth naming — contract CT107, earthworks for Beitou Depot [\[/rail/metro/depots/beitou-depot/\]](/rail/metro/depots/beitou-depot/), signed on **19 January 1988**, which DORTS itself calls the earliest of them^[206].

Tamsui–Xinyi Line — Where the sources disagree

Discussed on Tamsui–Xinyi Line [\[/rail/metro/lines/tamsui-xinyi-line/\]](/rail/metro/lines/tamsui-xinyi-line/) in the source page's "Where the sources disagree" section.^[208]

Where the sources disagree

Dongmen dimensions and shield drives. The 2005 DORTS paper reports a box about **217 m × 24.7 m**, excavated about **31.2 m**, with Xinyi shield drives of **1,240.5 m** and **1,247.0 m** (about 2,487.5 m combined).^[208] The 2014 DORTS construction paper instead reports about **216 m × 25 m**, an excavation of about **32 m**, and drives of **1,219.3 m** and **1,225.8 m** (about 2,445.1 m combined).^[209] The difference is published as a conflict because neither source states why its measuring basis differs.

Route length. DORTS's two published figures are 23.8 km for the Tamsui section including the branch^[206] and 6.4 km for the Xinyi section^[207]. They meet end to end at **R08**, so they sum to 30.2 km with the branch, or 29.0 km for the main line alone — but that sum is this page's arithmetic on two primary figures, not anybody's published length. Chinese Wikipedia's infobox gives **32.3 km**^[210]. Nothing read for this page explains the two-to-three kilometre gap, and the whole-line spec row therefore reads TBC rather than picking one. The Wenhua Line's three lengths turned out to be three correct measurements of three different things; this may be the same, and saying so is not the same as knowing it.

Station count. DORTS's 22^[206] and 7^[207] share **R08**, which nets to 28 — the number in service today, **R02** to **R28** plus **R22A**. Chinese Wikipedia says 29, counting the unopened **R01**^[210]. Those are compatible once you know what each counts.

Rolling stock. Chinese Wikipedia's line infobox names C301, C381 [\[/rail/metro/rolling-stock/c381/\]](/rail/metro/rolling-stock/c381/) and C381A^[210]; its Xinbeitou article names C371 [\[/rail/metro/rolling-stock/c371/\]](/rail/metro/rolling-stock/c371/) for the branch^[211]. Two articles on one encyclopedia, two fleets. Neither was checked against a TRTC or manufacturer record, so the facts panel names no fleet at all. The obvious reconciliation is obvious enough to be suspicious.

Wenhu Line — Length records and measurement conflicts

Discussed on Wenhu Line [/rail/metro/lines/wenhu-line/] in the source page's "Length records and measurement conflicts" section. [212]

Length records and measurement conflicts

Four figures circulate, and they are not in conflict — they measure four different things. **This site publishes 25.17 km, the operating length**, and says what each of the others counts.

FIGURE	WHAT IT MEASURES	SOURCE
25.17 km	Operating length — the railway that carries passengers, BR01 to BR24	TDX CumulativeDistance against the last station of route BR-1 [212]
25.7 km	The two construction projects added together	10.9 km + 14.8 km, both DORTS's own figures [213]
25.04 km	The same railway, measured by this site along MOTC's surveyed geometry from the first station to the last	the map below
26.42 km	The whole published alignment, including 635 m of depot lead beyond BR01 and 744 m of tail track beyond BR24	the same geometry, untrimmed [212]

The last row is the one this site got wrong: it printed the untrimmed figure as the route length for four builds, because measuring everything MOTC draws counts depot lead and tail track that no passenger travels on [212]. Trimmed to the termini, the same geometry lands within 130 m of the operator's own figure [212] — and that agreement is the check working, which is why both are still printed side by side on the network page [/rail/network/].

The 25.7 km that appears as 路線長度 on zh.wikipedia [214] is the **sum of the two published section lengths**: DORTS records 木柵線 約10.9公里 and 內湖線 約14.8公里, and 10.9 + 14.8 = 25.7 exactly [213]. Those are project lengths — the extent of what was built, including non-revenue

track at each end — which is why the total exceeds the 25.17 km of railway that carries passengers^[212].

Zhonghe—Xinlu Line — Length records and measurement conflicts

Discussed on Zhonghe—Xinlu Line [</rail/metro/lines/zhonghe-xinlu-line/>] in the source page's "Length records and measurement conflicts" section.^[215]

Length records and measurement conflicts

Three figures, and they are not really in conflict once labelled. **31.5 km and 26 stations** is the sum of the three component projects' own DORTS figures (5.4 + 19.7 + 6.4, with the station count reconciled above), and it matches the total zh.wikipedia's infobox gives outright^[215] ^[216] ^[217] ^[218]. That is the whole network as built. TDX instead measures each branch as it actually runs from Nanshijiao [</rail/metro/stations/o01/>]: **24.11 km** to Huilong [</rail/metro/stations/o21/>], **18.41 km** to Luzhou [</rail/metro/stations/o54/>]^[219] — figures a passenger's own journey matches, but which overlap each other along the shared trunk and so cannot simply be added to the network total.

Taipei Metro fares — A genuine conflict: how many social-welfare points, exactly

Discussed on Taipei Metro fares [</rail/metro/operations/fares/>] in the source page's "A genuine conflict: how many social-welfare points, exactly" section.^[220]

A genuine conflict: how many social-welfare points, exactly

Senior (敬老卡) and disability (愛心卡) cardholders get a monthly allowance of social-welfare points, usable across TRTC, NTMC's Circular Line and light rail, Maokong Gondola [</rail/cable/lines/maokong-gondola/>], and joint bus operators, before falling back to a 40% MRT discount or 50% bus discount once exhausted.^[220] TRTC's own FAQ states this allowance as **600 points a month**; NTMC's own FAQ, describing what reads as the identical benefit for the identical population, states **480 points a month**.^[220]^[221] Both are primary sources directly contradicting each other on a figure that affects a specific, sizeable population of riders. Neither is picked here.

Taipei Metro ridership — TRTC: 2.1 million riders a day, most of the way back from COVID

Discussed on Taipei Metro ridership [</rail/metro/operations/ridership/>] in the source page's "TRTC: 2.1 million riders a day, most of the way back from COVID" section.^[222]

TRTC: 2.1 million riders a day, most of the way back from COVID

TRTC's own FY2025 performance report puts average daily ridership at 2,101,700 — up 3.7% on FY2024's 2,026,843 — split into 2,276,587 on an average weekday and 1,740,170 on an average holiday or weekend.^[222] That figure is 97.2% of the pre-pandemic FY2019 average of 2,163,285, a recovery TRTC states directly rather than leaving a reader to infer it.^[222] Service quality stayed within the operator's own statutory floors across all five lines: punctuality (arrival within schedule) ranged from 99.69% to 99.93%, and train-availability rates from 91.85% to

95.83%, both comfortably above the 99% and 90% floors respectively.^[222] System reliability, measured in mean distance between failures (MKBF), reached 23.009 million car-kilometres in FY2024 — the best year on record — and 19.678 million in FY2025, the second-best.^[222] A widely repeated shorthand claiming MKBF "exceeds 20 million car-km" holds for FY2024 but not FY2025, which fell just short of that threshold — worth stating precisely rather than rounding up.

TRTC's cumulative ridership has passed several billion-scale thresholds since the system opened in 1996: 500 million by January 2001, 2 billion by August 2005, 4 billion by April 2010, 5 billion by February 2012, 10 billion by March 2019, 13 billion by November 2023, and 15 billion by 24 June 2026.^[223] TRTC's own operational report, written earlier in 2026, separately states the system had "surpassed 14.5 billion" trips as of that writing — consistent with, not contradicting, the chronicle's later 15-billion milestone a few months on.^{[222] [223]}

- Company Chronicle [<https://www.metro.taipei/cp.aspx?n=B27E7BC8CBBCDA61>] — primary; Taipei Rapid Transit Corporation (臺北大眾捷運股份有限公司); accessed 2026-08-28.^[223]

Taipei Metro ridership — Remaining gaps

Discussed on Taipei Metro ridership [</rail/metro/operations/ridership/>] in the source page's "Remaining gaps" section.^[224]

Remaining gaps

Per-line ridership for TRTC's four heavy lines individually (Red, Green, Orange, Blue) is not published anywhere found for this page. Whether the 31 December 2025 24-hour figure of 3,043,167 system-wide riders is TRTC's genuine all-time single-day record is not established — TRTC's own chronicle states the figure without record-specific language. TRTC's FY2025 annual total, calculated here by summing its own two-category table, sits within rounding distance of a different figure attributed to a city-government statistical yearbook, but that yearbook's own tables could not be independently read to confirm the match precisely — not established.^[224]

Sources for this entry

C301 — Fleet-count conflict

Discussed on C301 [/rail/metro/rolling-stock/c301/] in the source page's "Fleet-count conflict" section.^[225]

Fleet-count conflict

The detailed DORTS history and TRTC's 2012 report both give 22 trains, while the fixed formation and total of 132 cars independently produce the same arithmetic: $22 \times 6 = 132$.^[225]^[226] DORTS's later no. 48 article instead prints **132 輛 (21 列)** — 132 cars and 21 trains.^[227] That parenthetical conflicts with both the other official records and its own six-car context; it is published here as an unresolved source error rather than quietly discarded.

C321 — Source wording conflict

Discussed on C321 [/rail/metro/rolling-stock/c321/] in the source page's "Source wording conflict" section.^[228]

Source wording conflict

The Audit Office first describes the communications work as covering 36輛電聯車, literally 36 EMU cars, but TRTC's response on the same page says installation was complete on 全部36列車, all 36 trains.^[228] DORTS's two independent fleet records establish 36 six-car trains and 216 cars, but the audit's two wordings remain published here as an internal conflict rather than silently normalised.^[229] ^[230]

Sources for this entry

- Taipei Metro's procurement of controllers for 321-type EMUs was seriously behind schedule, and the liquidated-damages calculation lacked a contractual basis [https://auditreport.audit.gov.tw/ServerFile/Get/6379270128874995755bce8920a08e4970aa52b4f88fe32edb] — primary; National Audit Office (審計部); accessed 2026-08-23.^[228]

C370 (Bombardier Innovia) — Passenger systems and capacity

Discussed on C370 (Bombardier Innovia) [</rail/metro/rolling-stock/innovia-apm-256-c370/>] in the source page's "Passenger systems and capacity" section.^[231]

Passenger systems and capacity

Each car has four externally sliding doors, two per side, driven by DC motors.^[231]

Microprocessor controllers monitor direction, speed, obstacle detection and ATC commands.

^[232] Door-side lights flash for five seconds before opening, and multi-tone audible warnings provide an equivalent cue before opening and closing.^[232] Four dynamic route displays, four passenger-information screens, two emergency intercoms, CCTV and two extinguishers were specified per car.^[231]

Capacity has an unresolved primary-source disagreement. The design paper gives 20 seats and 93 people per car at five standing passengers per square metre, which implies 372 per four-car train.^[233] TRTC's current network introduction uses the same five-person standing density but states approximately 386 people per Bombardier train.^[234] The 14-person difference is not explained in either opened page, so both values are published rather than one being chosen.

Taipei-region rail projects — Approved or advancing extensions

Discussed on Taipei-region rail projects [</rail/projects/project-status/>] in the source page's "Approved or advancing extensions" section.^[235]

Approved or advancing extensions

Taichung's Blue Line is documented separately as an approved project moving into route construction.^[235] The full project page gives 24.78 km, 20 stations and one depot; current route contracts cover BC11 (B01–B03) and BC12 (B04–B08).^[235] See the Taichung Metro Blue Line project page [</rail/projects/taichung-blue-line/>] for the dated approval and procurement record.

Taichung's Purple Line remains a feasibility-stage project under central review.^[236] Its full project page gives approximately 16.31 km and 16 planned stations, while the July 2026 release gives the estimated NT\$690.87 billion cost.^[236]^[237] See the Taichung Metro Purple Line project page [</rail/projects/taichung-purple-line/>] for its dated review chronology and route boundary.

Taichung's Airport Orange Line feasibility study was approved by the Executive Yuan on 18 August 2026.^[238] The current project page gives approximately 29.23 km and 26 planned stations; see the Taichung Airport MRT Orange Line project page [</rail/projects/taichung-orange-line/>] for its approval sequence, forecast boundary and pre-construction status.^[238]

The Orange Line Sea Line extension remains a feasibility-stage project with an interim revised report under review.^[239] Its January public proposal is approximately 16.50 km with 10 stations and branches toward Sanmin Road and Wuqi Fishing Port; see the Orange Line Sea Line extension project page [</rail/projects/taichung-orange-sea-extension/>] for the planning boundary, mode debate and source conflicts.^[239]

Taichung's Chongde–Fengyuan Red Line remains in feasibility review.^[240] Its preliminary scope is approximately 15.42 km with 11 stations and one level-five depot, but the Fengyuan urban section still has two elevated and one underground alternatives.^[240]^[241] See the Taichung Metro Chongde–Fengyuan Line project page [</rail/projects/taichung-red-line/>] for the study chronology, forecast boundary and unresolved route choice.

The Xinyi East Extension is a one-station, approximately 1.4 km extension with tail tracks; its CR580C contract page records a 17 October 2016 start.^[242] DORTS's 2026 priorities describe the construction fences coming down and the extension entering service after preliminary inspection, while its older FAQ gives ROC 115 as the dated completion target.^[243]^[244]

The Sanying–Bade extension is approved at the comprehensive-planning level but is not presented here as a construction start. The current New Taipei record describes a 4.03 km, three-station route from **LB12** to a jointly built **LB14** / **G04**, and records detailed design beginning 1 July 2026.^[245] Danhai Blue Sea Line Phase 2 has moved further than a sketch but is still a changing project: the original route was 4.4 km, the revised riverside route is 3.32 km, and advance road, utility and track works began in June 2025 while the revised plan continued through review.^[246]

The Railway Bureau's current budget also separates approved projects from municipal route proposals. It includes the **A14** Airport MRT station works and the 15.59 km, 13-station Nangang–Badu project, which is planned to connect the Taipei-region metro systems, TRA and HSR; this budget record gives its programme as ROC 113–123.^[247]

Taichung Metro Purple Line — Published scope and conflicts

Discussed on Taichung Metro Purple Line [</rail/projects/taichung-purple-line/>] in the source page's "Published scope and conflicts" section.^[248]

Published scope and conflicts

The current project page gives a preliminary length of approximately 16.31 km, 16 stations and an elevated form.^[248] The July 2026 release describes the same preliminary project as approximately 16.3 km, with 16 elevated stations and a medium-capacity metro system.^[249] Both values are retained because the sources do not explain whether the 0.01 km difference is rounding or a small planning revision.^{[248] [249]}

The July release gives a total estimated cost of NT\$690.87 billion, with estimated central support of NT\$292.04 billion and a local share of NT\$398.83 billion.^[249] These are estimates attached to a feasibility-stage project, not a construction contract value or a final approved funding split.^[249]

TOD and joint development — Meihe City and the legal dispute

Discussed on TOD and joint development [</rail/projects/tod-joint-development/>] in the source page's "Meihe City and the legal dispute" section.^[250]

Meihe City and the legal dispute

Meihe City is the region's essential caution against treating joint development as an uncomplicated financing success. New Taipei's official 2014 account says the review lasted more than 15 years, reduced an original 26-building design to 13 buildings, and required greater setbacks and public space after urban-design and environmental review.^[250] A later New Taipei government research report instead describes 16 towers, 2,220 units, about 400,600 m² of floor area, and Rich Development as the selected private developer.^[251] Those are conflicting project descriptions from different official records; the site publishes both rather than choosing one.
^[250] ^[251]

The legal issue is not just a design disagreement. Judicial Interpretation No. 743 states that land expropriated under MRT Law Article 6 cannot be used in the same plan for Article 7 joint development, and that transfer to a third party requires clear legal authority.^[252] The interpretation records the underlying Xindian depot case, the different statutory purposes of expropriation and joint development, and the disagreement among the Control Yuan, executive agencies and courts before the interpretation.^[252] Meihe City is therefore published here as a legal and governance conflict as well as a large-scale station-area project.^[252]

Taipei-region metro electrification — Airport MRT: an official conflict

Discussed on Taipei-region metro electrification [</rail/technology/metro-electrification/>] in the source page's "Airport MRT: an official conflict" section.^[253]

Airport MRT: an official conflict

The Railway Bureau's technical power page says domestic high- and medium-capacity metro systems use third rail as the mainstream arrangement.^[253] It states that the operating Airport MRT uses a 750 V DC lower-contact third rail. It also describes three main substations, 27 traction substations and 22 station substations for the example system.^[253]

The Bureau's separate Airport MRT project overview gives a different value in its core-electromechanical summary: 1,500 V DC supplied through overhead catenary.^[254] Both are official Bureau pages, and the project overview is itself maintained as a project description. The current page therefore reports the Airport MRT collection method and voltage as TBC rather than silently choosing one record. A signed as-built electrical specification, operator asset register or dated acceptance record would settle the conflict.

Taiwan High Speed Rail — BOT contract and financial disputes

Discussed on Taiwan High Speed Rail [</rail/thsr/lines/thsr/>] in the source page's "BOT contract and financial disputes" section.^[255]

BOT contract and financial disputes

The Railway Bureau describes the project as Taiwan's first major national infrastructure project promoted through private investment participation.^[255] It records the 23 July 1998 signing of a 35-year construction-and-operation concession and a separate 50-year station-area development concession.^[255] The stated project cost was approximately NT\$513.3 billion, with the government responsible for land, the Taipei underground co-construction section, supervision and management, while the concession company funded civil works, stations, core electromechanical systems, operation and maintenance.^[255]

The original financial model did not remain unchanged. The Railway Bureau says a 27 July 2015 amendment extended the concession to 70 years, cancelled the station-area development contract, returned development land, reduced capital to clear accumulated losses and added NT\$30 billion of government investment.^[255] The Control Yuan's official record names an investigation into whether direct and indirect public investment violated BOT principles.^[256] In a related statement, the Control Yuan says public and state-enterprise entities supplied 37.42% and describes that as a serious departure from the government-zero-investment commitment.^[257] Those are the source's figures and characterization; this page does not average them into a new ownership percentage.

THSR station-area development — Success and stagnation, in the same programme

Discussed on THSR station-area development [</rail/thsr/projects/joint-development/>] in the source page's "Success and stagnation, in the same programme" section.^[258]

Success and stagnation, in the same programme

THSR's own twentieth-anniversary framing draws a sharp contrast. At Qingpu, next to Taoyuan Station, roughly 70% of the local population is now under 45, with new commercial floor space added between 2017 and 2025 equal to about 80% of the area's entire prior office stock.^[258] At Zhubei, next to Hsinchu Station, the under-45 population grew 43.8% — the only one of the twelve station areas to show positive growth in that age band — alongside a fourfold rise in local output value.^[258] THSR's chairman described this as a shift from "movement" to "relocation" to "liveability."^[258]

Changhua [</rail/thsr/stations/changhua/>] tells a different story. THSR's own twentieth-anniversary figures rank it last of the twelve stations by absolute ridership.^[258] Since 2014, the county has offered 66.34 hectares of buildable land for sale around the station; 36.76 hectares remained unsold as of the most recent figures read for this page, and the county's own description is blunt: development has fallen short of expectations.^[259] Miaoli tells a related story — two county-owned industrial parcels went to bid 42 times without a single successful sale — though the county was still actively pitching the site to prospective tenants, including Nvidia, as recently as October 2025.^[260]

A genuine statistical trap sits inside this same anniversary report:^[258] Miaoli, Yunlin [</rail/thsr/stations/yunlin/>] and Changhua post the *highest* ridership-growth multiples of all twelve stations. Both things are true at once — the fastest percentage growth, and the lowest absolute ridership — because an extremely small opening-period base makes any subsequent traffic look like a large multiple. Neither figure should be read as contradicting the other.

THSR rolling stock — A seating-capacity conflict that stays open

Discussed on THSR rolling stock [</rail/thsr/rolling-stock/fleet-roster/>] in the source page's "A seating-capacity conflict that stays open" section. [261]

A seating-capacity conflict that stays open

THSR's own current car-facilities page states 977 seats per trainset. [261] A different figure, 989, traces back through Wikipedia's own citation trail to an archived MOTC Railway Bureau document this research could not independently fetch to check its date or context. [262] No source found explains why the two numbers differ — a guess that some standard-class seating was later converted to luggage space is not established and not published as fact here. Both figures are recorded; neither is picked.

Taiwan Railways level crossings — Elimination by grade separation

Discussed on Taiwan Railways level crossings [</rail/tra/facilities/level-crossings/>] in the source page's "Elimination by grade separation" section. [263]

Elimination by grade separation

TRA has been eliminating crossings city by city through grade-separation megaprojects for decades, though this page's confidence in the individual project details is limited: the Railway Bureau's own project pages, the natural primary source, returned no readable content on every fetch attempted. Taipei's underground project reached full through-running on 24 October 2011. [263] Kaohsiung's underground project's first phase eliminated seven named surface crossings,

with the last surface-running train departing 13 October 2018; sources disagree on when its second phase was completed, and this page publishes both years found rather than choosing one. Hualien's own elevation project, covering seven crossings between Hualien and Ji'an, is confirmed by Legislative Yuan records to remain at the feasibility and planning stage, not under construction. ^[264]

Taiwan Railways heritage rolling stock and the National Railway Museum — Five locomotives, still formally managed

Discussed on Taiwan Railways heritage rolling stock and the National Railway Museum [[/rail/tra/rolling-stock/heritage-preservation/](#)] in the source page's "Five locomotives, still formally managed" section. ^[265]

Five locomotives, still formally managed

TRA's own internal regulation still actively manages five steam locomotives as a tiered rental asset class: CT273 and CK124 in the top "special-A" tier, DT668 and CK101 in the "A" tier, and the narrow-gauge LDK59 in the "B" tier, each with a stated rate for a dynamic (running) rental. ^[265] The same regulation bars CT273 and DT668 from the Pingxi, Shen'ao and Jiji lines entirely, and restricts CK101 to static or motionless display on major festival days only, because its original manufacturer has closed and parts and wheels can no longer be sourced. ^[265]

CT273, a 1943 Kawasaki-built CT270-class locomotive based on the Japan Railways C57 design, was TRA's last steam locomotive withdrawn from regular service, in 1984, and was restored to operation in 2014; a 2025 news report, read via search synthesis rather than a full fetch and flagged accordingly for confidence, describes it hauling a summer tourist train between Yuli and Taitung, based at Hualien. ^[266] DT668, a 1941 Kawasaki-built DT650-class locomotive and TRA's heaviest steam class, was withdrawn March 1984 and restored to run on the Neiwan Branch Line in November 2011. CK124 was restored to operation in 2001, and LDK59, TRA's preserved narrow-gauge locomotive, in 2011 — both dates from a secondary lead index, not independently verified against a primary source. ^[267] This page does not state where each is currently based with confidence: sources disagree between Changhua Roundhouse and TRA's Fugang depot for both CK101 and DT668, and this page publishes both locations rather than choosing one.

Taiwan Railways heritage rolling stock and the National Railway Museum — A museum, open since 2025

Discussed on Taiwan Railways heritage rolling stock and the National Railway Museum [</rail/tra/rolling-stock/heritage-preservation/>] in the source page's "A museum, open since 2025" section.^[268]

A museum, open since 2025

The National Railway Museum's first phase opened 31 July 2025 at the former Taipei Railway Workshop site, comprising six restored heritage buildings — the Diesel-Electric Workshop, General Administration Building, Technical Training Institute, Materials Testing Lab, Grand Hall and Bathhouse — eight exhibitions, a weekend heritage-train ride over roughly 650 m using restored diesel railcars, and 24 displayed heritage vehicles.^[268] The museum's own current page confirms it remains open in 2026 on the same footprint, Tuesday through Sunday; no source read for this page states a Phase 2 opening date or scope.^[269] The site itself, Taipei Railway Workshop, was designated a national historic monument in 2015; sources disagree on the exact date.

Taiwan Railways train control and signalling — What the 2018 Puyuma accident changed

Discussed on Taiwan Railways train control and signalling [</rail/tra/technology/signalling/>] in the source page's "What the 2018 Puyuma accident changed" section.^[270]

What the 2018 Puyuma accident changed

The Taiwan Transportation Safety Board's own investigation into the 2018 Puyuma derailment found that ATP had been illegally isolated and the train was travelling over the applicable speed, attributing part of the root cause to TRA's own failure to enforce its existing rules against unauthorised ATP isolation; the report issued 27 recommendations, though the published announcement does not itemise which specifically concern ATP or signalling design as distinct from management and procedure. ^[270]

In response, TRA built an "ATP isolation speed-limit system" that forces a speed cap even when ATP itself is switched off. Sources disagree on both its budget and its cap: one report gives a 60 km/h limit and a NT\$245 million budget covering 52 systems across 18 Puyuma and 8 Taroko trainsets; ^[271] another gives a NT\$270 million budget. ^[272] A separate, earlier report describes an initial ministerial directive for a 65 km/h cap that explicitly did not rule out going lower — consistent with, but not confirmed as, the same rollout. Post-accident operating rules also require drivers to check ATP at both cab ends before departure and require a faulty-ATP train be swapped rather than dispatched.

Airport MRT — From a failed BOT to a government-built line

Discussed on Airport MRT [</rail/tymc/lines/airport-mrt/>] in the source page's "From a failed BOT to a government-built line" section. ^[273]

From a failed BOT to a government-built line

Planning has at least three defensible starting points, and different sources plainly mean different things by it: an October 1989 feasibility study is the earliest date found, though only at secondary strength; in October 1996 the central government decided to build the line under a Build-Operate-Transfer (BOT) model; and Long Life International Development Co. (長生國際開發) won the BOT bid in 1998. ^[273] The BOT arrangement collapsed on 31 December 2002, when Long Life and the then High Speed Rail Bureau agreed to terminate the contract. ^[273] The government took direct responsibility afterward: MOTC designated the High Speed Rail Bureau as the project's construction body on 28 October 2003, and the central government approved the construction plan on 9 March 2004. ^[274] ^[275]

Construction start likewise has more than one dated event rather than one clean answer: New Taipei's project record gives 27 February 2006 for the formal start of the Sanchong–Airport–Zhongli section and its E&M systems, while TYMC's own company history instead records a ceremonial groundbreaking on 26 June 2006, presided over by the Premier.^[275]^[274] The line opened on 2 March 2017 for stations **A1** through **A21**, after the originally announced January 2009 target had been publicly revised six times — the specific dates and reasons for each of the six changes are not established by any source read for this page and stay TBC.^[274]

Airport MRT — The Marubeni dispute: two confirmed figures, one unconfirmed total

Discussed on Airport MRT [</rail/tymc/lines/airport-mrt/>] in the source page's "The Marubeni dispute: two confirmed figures, one unconfirmed total" section.^[276]

The Marubeni dispute: two confirmed figures, one unconfirmed total

Around the 2017 opening, contemporaneous wire reporting recorded the then High Speed Rail Bureau imposing a NT\$2.5 billion delay-penalty cap on contractor Marubeni Corporation (丸紅), the contractual maximum, plus a separate NT\$1.9 billion performance bond withheld over Marubeni's unauthorised subcontracting of the signalling system to a British firm — its contract required Marubeni to design that system itself.^[276] Marubeni separately counter-claimed NT\$12.9 billion against the Ministry, on the grounds of repeated Bureau-directed design changes.^[276] No source read for this page states a combined total for the dispute of any kind: NT\$2.5 billion plus NT\$1.9 billion is NT\$4.4 billion, not any commonly-circulated larger figure, and the individual component figures are published here on that basis rather than an unconfirmed total.

A separate, later dispute in 2021 concerned in-service performance rather than construction delay: the Public Construction Commission recommended withholding NT\$726,926,496 from Marubeni for missing three contractual operating standards — express journey time, average speed and train headway.^[277]

Taoyuan Green Line — Construction approvals and progress

Discussed on Taoyuan Green Line [</rail/tymc/lines/green-line/>] in the source page's "Construction approvals and progress" section.^[278]

Construction approvals and progress

The feasibility study was approved by the Executive Yuan on 26 August 2011, the environmental assessment on 9 September 2014 and the comprehensive planning report on 20 April 2016.^[278] The bureau records the GM01 systems package award in 2018, GC01's elevated civil package in 2018, GC02 and GC03 underground packages in 2019, and the GC05 lifts-and-escalators package in 2022.^[278] It separately records GD04A detailed design and GC04B's later elevated civil package, with the package progress values dated to June 2026.^[278]

The current construction overview lists the Green Line as being in the construction stage at 72.19% overall progress.^[279] That programme figure is not silently substituted for any package figure: the line page records both the overview value and the bureau's individual GM01, GC01, GC02, GC03, GC05 and GC04B values as different measurements with different dates.^{[278] [279]}

Taoyuan Airport MRT fare history — A separately reported discount, not verified here

Discussed on Taoyuan Airport MRT fare history [</rail/tymc/operations/fares/>] in the source page's "A separately reported discount, not verified here" section.^[280]

A separately reported discount, not verified here

Existing research on this project's Airport MRT line page separately records a January 2025 cancellation of a NT\$10 discount that had applied to single tickets, sourced to a Global Views Monthly (遠見雜誌) article citing the company chairman on rising electricity costs.^[280] Neither of the two ticketing pages read for this report mentions that change, so it is neither newly confirmed nor contradicted here — it remains at the same secondary-source strength already on record. Whether that single-ticket discount cancellation and the season-pass repricing described above form one coordinated fare reform, both taking effect the same day, or are simply two unrelated changes that happened to land together, is not established by any source read and is not assumed either way.

Sources for this entry

How bus fare stages (段) actually work — How crossing multiple segments is counted

Discussed on How bus fare stages (段) actually work [</ticketing/guides/bus-fare-stages/>] in the source page's "How crossing multiple segments is counted" section.^[281]

How crossing multiple segments is counted

Chinese Wikipedia's article on New Taipei's own city buses gives a worked example of the counting logic. For a corridor running through zones A, B and C, with B as the segment point: riding within one zone, or from A to B, or from B to C, is one segment; riding all the way from A to C is two segments (the single-segment fare, doubled)^[281]. On a longer corridor with two segment points, A–B–C–D–E, both B and D count as crossing points^[281]. This is an illustrative example rather than a government fare rule in itself, but it does not contradict, and directly illustrates, the primary rule already confirmed above.

Fare history and concessions — Bus fares

Discussed on Fare history and concessions [</ticketing/guides/fare-history/>] in the source page's "Bus fares" section.^[282]

Bus fares

Taipei and New Taipei buses use segment fares, not one flat price for every journey.^[282] The current passenger table is NT\$15 full fare per segment, NT\$12 for a student EasyCard segment and NT\$8 for elderly, disabled/companion and eligible-child concessions.^[282] Taipei PTO records the latest joint-operation bus operating-rate approval as 1 July 2020 while passenger fares stayed at 15/12/8 and the city subsidised the difference.^[283]

This is a measurement conflict, not a price contradiction: operating rate is the regulated cost/revenue figure, while passenger fare is what the rider pays. The historical report records a 1997 bus-rate-related transfer-discount change, but a complete gazette-backed chronology of every passenger-fare adjustment remains TBC.^[284]

- 52 Green electric bus era arrives — Kaohsiung buses roll out further and further [https://168.motc.gov.tw/theme/fullsized/post/1906121103392]

綠色電動巴士時代來臨 高雄公車愈開愈遠

SECONDARY MOTC Traffic Safety Portal (交通部 168 交通安全入口網) accessed 2026-08-28

Dated 2018-04-10. States a citywide total of 77 electric buses across seven private operators: 港都客運 50, 南台灣客運 14, 高雄客運 11, 漢程客運 2 — a much smaller figure than the 2022 195-bus count, from an earlier date.

- 53 Kaohsiung's new good-life progress, No. 05 [https://takao.kcg.gov.tw/article/760]

高雄新好生活進行式 No.05

PRIMARY Kaohsiung City Government Information Bureau (高雄市政府新聞局), 高雄畫刊 accessed 2026-08-28

Published 2026-05-06. States a citywide figure of 195 electric low-floor buses out of roughly 1,000+ total city buses (19%), and profiles a Foxtron "Model T" bus in service on Route 24 with a stated 2-hour 80% charge time.

- 54 Kaohsiung bus route overview by route [https://www.tbkc.gov.tw/Service/PublicTransport/NewBusRoute]

公車路線總覽(依路線別)

PRIMARY Kaohsiung City Government Transportation Bureau (高雄市政府交通局) accessed 2026-08-25

The full municipal route index displayed 197 routes when fetched; its count is retained as a separate publication scope from TDX's 316 route records.

- 55 Kaohsiung city-bus route response [https://tdx.transportdata.tw/api/basic/v2/Bus/Route/City/Kaohsiung?\$format=JSON]

高雄市公車路線資料 (TDX Route)

PRIMARY Taiwan Ministry of Transportation and Communications TDX (交通部運輸資料流通服務) accessed 2026-08-25

The full live response supplied 316 route records, route names, terminal labels, operator objects, sub-routes, route-map URLs, version IDs and source update times.

- 56 Kaohsiung TDX ordered bus stops by route [https://tdx.transportdata.tw/api/basic/v2/Bus/StopOfRoute/City/Kaohsiung?\$format=JSON]

高雄市公車路線站序資料 (TDX StopOfRoute)

PRIMARY Taiwan Ministry of Transportation and Communications TDX (交通部運輸資料流通服務) accessed 2026-08-25

The full live response supplied 617 direction-level records and 19,191 ordered stop objects with names, sequence values, boarding flags and coordinates.

- 57 Kaohsiung public-transport accessibility service index [https://www.tbkc.gov.tw/Service/PublicTransport/Accessibility]

無障礙服務

PRIMARY Kaohsiung City Government Transportation Bureau (高雄市政府交通局)

accessed 2026-08-25

The full page lists a dated low-floor-bus route and reservation information file, plus separate rehabilitation-bus and facility entries; the linked low-floor PDF itself failed fetch and is not expanded here.

58 Kaohsiung MRT feeder-bus operations [<https://data.gov.tw/dataset/159665>]

高雄市捷運接駁公車營運情形

PRIMARY Kaohsiung City Government Budget Office (高雄市政府主計處)

accessed 2026-08-25

The full catalogue lists annual fields including route mileage, vehicles, trips, passenger count, passenger-kilometres and revenue; its linked JSON and CSV resources failed direct fetch, so no values are asserted.

59 Taichung Bus — company profile [https://www.tcbus.com.tw/co_about.html]

台中客運-公司簡介

PRIMARY 臺中汽車客運股份有限公司 accessed 2026-08-28

The operator's own page, fetched in full. Supports the 474-vehicle fleet figure (undated) and one of two disagreeing depot/station lists — see the conflicts section.

60 Taichung Bus — stations [https://www.tcbus.com.tw/co_office.html]

台中客運-站場簡介

PRIMARY 臺中汽車客運股份有限公司 accessed 2026-08-28

The operator's own second, longer depot/station list (12 facilities against the About page's 8-9) — the two pages do not agree and this site publishes both.

61 Taichung city-bus route and stop information dataset [<https://data.gov.tw/dataset/83748>]

臺中市市區公車路線站點資訊

PRIMARY Taichung City Government Transportation Bureau (臺中市政府交通局)

accessed 2026-08-25

The official dataset page defines the route-map scope, fields, provider, irregular update frequency, 2026-06-09 metadata update and warning that the published compilation can lag actual service.

62 Taichung bus real-time information [<https://citybus.taichung.gov.tw/ebus>]

台中公車即時動態資訊

PRIMARY Taichung City Government Transportation Bureau (臺中市政府交通局)

accessed 2026-08-25

The official city-bus interface publishes network fare rules, directs passengers to live/operator schedules for actual departures and lists operator links.

63 Taichung city-bus route-map CSV [<https://newdatacenter.taichung.gov.tw/api/v1/no-auth/resource.download?rid=20c2e4cc-49bf-45d5-a880-714c7c66eed6>]

taichung_bus_maps_2026.CSV

PRIMARY Taichung City Government Transportation Bureau (臺中市政府交通局)

accessed 2026-08-25

The full CSV snapshot supplies 392 route records with operator labels, route descriptions, map links and outbound/return stop strings; counts and direction terminal summaries in this page are derived from those records.

- 64 **Taichung 小黃公車** [<https://www.traffic.taichung.gov.tw/content/index.asp?Parser=1,7,505,52>]

臺中市小黃公車

PRIMARY

Taichung City Government Transportation Bureau (臺中市政府交通局)

accessed 2026-08-25

The official page lists 26 Yellow routes, fixed-departure and reservation rules, two reservation phone groups, stop behaviour and linked route/timetable images.

- 65 **Tainan city bus network reorganisation — new route awards** [https://www.tainan.gov.tw/news_content.aspx?n=13370&s=8687622]

大台南公車路網整理計畫 新增業者路線

PRIMARY

Tainan City Government (臺南市政府) accessed 2026-08-28

Dated 2024-08-21. Awarded 巨業交通 nine routes (existing and new) with a first batch targeted for Q4 2024, and awarded 統聯客運 ten routes, becoming Tainan's sixth operator from 2025-01-03.

- 66 **Shing Nan Bus** [<https://zh.wikipedia.org/zh-tw/興南客運>]

興南客運

SECONDARY

維基百科 (Chinese Wikipedia) accessed 2026-08-28

Traces to 台灣輕鐵株式會社 (1921), merged into 興南乘合自動車株式會社 1 September 1941, renamed 興南汽車客運股份有限公司 26 April 1947. Fetched twice; a first pass garbled the years to 1912/1942, corrected on a targeted re-fetch — quoted text here is from the corrected fetch: 「1941年9月3日，台灣輕鐵株式會社、新化軌道株式會社與佳里商會合併為興南乘合自動車株式會社」。

- 67 **Xinying Bus** [<https://zh.wikipedia.org/zh-tw/新營客運>]

新營客運

SECONDARY

維基百科 (Chinese Wikipedia) accessed 2026-08-28

Formally established January 1950, tracing to a Japanese-era predecessor. Joined the Tainan city-bus system in a first batch of 44 transferred highway routes — this source and the separate 大台南公車 wiki article disagree on the year (2011 here, 2012 there); not independently resolved.

- 68 **Fucheng Bus (Tainan Bus)** [<https://zh.wikipedia.org/zh-tw/府城客運>]

府城客運

SECONDARY

維基百科 (Chinese Wikipedia) accessed 2026-08-28

Founded 2013-06-19 (統編 54077201) as a subsidiary spun off from 高雄客運 at the Tainan Transportation Bureau's request, after the original 台南客運 (a differently-owned company despite the similar English name) ceased operating city routes in 2003. Took over routes from 高雄客運 through 2013; later added double-decker circular routes (2018) and a tourist shuttle.

- 69 **Han-Cheng Bus** [<https://zh.wikipedia.org/zh-tw/漢程客運>]

漢程客運

SECONDARY 維基百科 (Chinese Wikipedia) accessed 2026-08-28

Founded 2013-11-15, HQ Kaohsiung, member of 台灣愛巴士交通聯盟 (Taiwan iBus Transportation Alliance, alongside 巨業交通 and 全航客運, also documented on this site's Taichung page). Began Kaohsiung operations 2013-12-15; expanded into Tainan 2019-12-05 as its fourth city-bus operator.

- 70 Route 77 operator transfer notice** [https://www.tainan.gov.tw/News_Content.aspx?n=13370&s=8381879]

大台南公車77路4/10起改由漢程客運營運

PRIMARY Tainan City Government (臺南市政府) accessed 2026-08-28

Dated 2023-04-08. Route 77 transferred from 府城客運 to 漢程客運 effective 2023-04-10, 40 daily trips, same stops and alignment.

桃園機場捷運

SECONDARY 維基百科 (Chinese Wikipedia) accessed 2026-08-12

Read in full. Source for the BOT era (1996年10月 BOT decision, 1998 Long Life International wins the bid, terminated 2002年12月31日), the two depot names (蘆竹機廠, 青埔機廠), and the express/commuter service pattern detail (34.03 km / ~39 min base express; ~64 min Huanbei peak express). Contains no Marubeni monetary figures at all, despite being the article a widely-circulated dispute figure is often attributed to.

- 161 TYMC company history [https://www.tymetro.com.tw/tymetro-new/tw/_pages/about/history.html]
桃捷大事紀

PRIMARY Taoyuan Metro Corporation accessed 2026-08-12

The operator's own milestone list: MOTC designated the High Speed Rail Bureau as builder 28 October 2003 (92年10月28日), central government approved the construction plan 9 March 2004, a groundbreaking ceremony was held 26 June 2006, and the company itself was established 6 July 2010 (99年07月06日).

- 162 Airport Line [<https://www.dorts.ntpc.gov.tw/about/route/npW0dxy4Z3Ex>]
機場線

PRIMARY New Taipei City Government, Department of Rapid Transit Systems (新北市政府捷運工程局) accessed 2026-08-12

The builder's own project record: route length 51.03 km, 22 stations (15 elevated, 7 underground), about 10.92 km underground and 40.11 km elevated, two depots, and total construction cost about NT\$113.85 billion. It records the 2006-02-27 start for the Sanchong–Airport–Zhongli section and E&M systems, the 2004-03-09 plan approval, the 2006-09-25 start of the underground Sanchong–Taipei section after Taipei's urban-design objection, and full-line operation on 2017-03-02.

- 163 Airport MRT opening date has changed six times: how we got here [<https://www.cna.com.tw/news/firstnews/201603040457.aspx>]
機場捷運通車時程變更6次 始末報你知

SECONDARY 中央社 CNA accessed 2026-08-12

The earliest announced opening date was January 2009; by this article's date (4 March 2016) it had changed six times: 最早決定的通車日是2009年1月，至今已變更6次。The fetch used for this page returned only the article's opening paragraph, not an itemised list of each change, which is why this page states the headline fact but not a full delay table.

- 164 About TYMC [https://www.tymetro.com.tw/tymetro-new/tw/_pages/about/index.html]

PRIMARY Taoyuan Metro Corporation (桃園大眾捷運股份有限公司) accessed 2026-08-12

The operator's own statement of its founding and opening date: 機場捷運線於106年3月2日正式營運通車 — service began 2 March 2017. Confirms the company was formed by the three city governments, with Taoyuan City Government designated by MOTC to run it.

- 165 Airport MRT settles accounts: High Speed Rail Bureau to fine Marubeni NT\$2.5 billion and pursue further damages** [<https://www.cna.com.tw/news/ahel/201701090048.aspx>]

機捷算總帳 高鐵局將罰丸紅25億並求償

SECONDARY 中央社 CNA (記者汪淑芬) accessed 2026-08-12

Contemporaneous wire report, 9 January 2017. Two figures, quoted directly: a NT\$2.5 billion delay penalty, the contractual maximum (罰金最高上限約25億元, calculated at 0.05% of contract value per day); and roughly NT\$1.9 billion in performance bonds withheld (扣住部分履約保證金約19億多元) over Marubeni's unauthorised subcontracting of the signalling system to a British firm. Also reports Marubeni's own NT\$12.9 billion counter-claim against MOTC over design changes. No combined total is stated in this article.

- 166 Airport MRT travel times miss target: Railway Bureau withholds over NT\$700 million from Marubeni** [<https://www.cna.com.tw/news/firstnews/202108290054.aspx>]

機捷行車時間未達標 鐵道局扣丸紅7億多元工程款

SECONDARY 中央社 CNA accessed 2026-08-12

A separate, later, smaller dispute: NT\$726,926,496 withheld (以扣工程款方式辦理驗收, 並建議減價金額7億2692萬6496元) for missed express-train travel time, average speed and headway targets, decided late 2020, reaching the Railway Bureau March 2021. Not the same matter as the 2016–17 penalty and bond figures above, and not a source for any 'NT\$7.2 billion' total — no such total appears in this article either.

- 167 Taoyuan Metro 2000-type electric multiple unit** [<https://zh.wikipedia.org/zh-tw/桃園捷運2000型電聯車>]

桃園捷運2000型電聯車

SECONDARY 維基百科 (Chinese Wikipedia) accessed 2026-08-12

Read in full. Manufacturer: 該型列車由川崎重工業製造 (Kawasaki Heavy Industries), built 2011–2013. 11 five-car sets (201–211), 55 cars, 4 passenger cars plus 1 dedicated luggage car per set. DC 750V third rail, 1,435mm gauge. ≈855 passengers per set, 206 seats, 8 wheelchair spaces. 100 km/h operating, 110 km/h design maximum. Transverse seating, overhead luggage racks, WiFi, USB charging; a photo caption notes wireless charging pads as currently suspended (暫停使用).

- 168 Taoyuan Metro 1000-type electric multiple unit** [<https://zh.wikipedia.org/zh-tw/桃園捷運1000型電聯車>]

桃園捷運1000型電聯車

SECONDARY 維基百科 (Chinese Wikipedia) accessed 2026-08-12

Read in full. Split manufacture under an industrial-cooperation programme: 川崎重工 (101–118~120編組) / 台灣車輛 (102~117編組) — Kawasaki built the prototype and sets 118–120, Taiwan Rolling Stock Co. built the rest domestically. Built 2011–2012 and again 2015. 4-car sets (4M), 20 sets currently (80 cars). Longitudinal seating. Same power supply and gauge

as the express fleet. The article's summary prose reads as 188 seats per car, but its own per-car table (44+47+50+44=185) shows 188 is the per-set total, not per car — checked here rather than repeated as written.

169 Taiwan MOTC TDX — StationOfRoute, operator TRTC [<https://tdx.transportdata.tw/>]

PRIMARY Ministry of Transportation and Communications, Taiwan accessed 2026-08-10
Government open data, committed to this repository at data/tdx/. Route BL-1 runs **BL01** to **BL23** over 23 stations with a final CumulativeDistance of 26.65 km; route BL-2 is the short working, **BL05** to **BL23**, 19 stations, 20.48 km. The inter-station gaps on this page are differences between consecutive cumulative distances on BL-1.

Cited only for its infobox length of 26.6 km, which is a third value in the length conflict and agrees with the TDX measurement to the rounding. The article carries one reference in total and says nothing substantive about the fleets.
-
- 176 **Bannan line** [<https://zh.wikipedia.org/zh-tw/板南線>]
板南線
SECONDARY 維基百科 (Chinese Wikipedia) accessed 2026-08-10
Read as a lead index and, via ?action=raw, as a bibliography — both news sources on this page came out of its reference list. Its infobox gives 28.2 km, 80 km/h operating and 90 km/h design speed, 750V 第三軌供電, both depots and both fleets. Its lead calls the line 全路網運量最大的路線 with no footnote of its own.
-
- 177 **Taipei MRT Engineering Series, revised edition, volume 15: MRT construction management practice** [<https://ebook.dorts.gov.taipei/ebook/no15/files/basic-html/page37.html>]
捷運工程叢書 精進版—15 捷運工程施工管理實務
PRIMARY Taipei City Government, Department of Rapid Transit Systems (DORTS)
臺北市政府捷運工程局 accessed 2026-08-23
DORTS's procurement history. It gives an approximately 7 km Banqiao length, says the Xindian River shield tunnels drove joint bids for CP261–CP263, distinguishes the Nangang contracts by technical and security requirements, and records the cancellation of negotiated-price awards on Banqiao.
-
- 178 **Control Yuan investigation report, case 114交調0005: the displacement of Circular Line track following the 3 April 2024 earthquake** [<https://www.cy.gov.tw/CyBsBoxContent.aspx?s=49082>]
監察院調查報告 114交調0005
PRIMARY 監察院 (Control Yuan of the Republic of China) accessed 2026-08-23

The single most important document on this subject, and the source for everything on this page attributed to the investigation. Commissioners 趙永清 and 葉宜津, on their own motion; reviewed 11 March 2025, published 17 June 2025. Read here from the report's .docx (<https://cybsbox.cy.gov.tw/CYBSBoxSSL/edoc/download/68978>), whose word/document.xml was extracted directly — about 15,800 characters of body text, the whole report minus figures and tables. A .pdf of the same report is at <https://cybsbox.cy.gov.tw/CYBSBoxSSL/edoc/download/72631> and could not be rendered in the environment used. Note that the report's 案由 recites the allegation being investigated — eleven displacements, NT\$400m+, over a year — and is not the same thing as its findings.

-
- 179 Eleven locations severely damaged on the Circular Line; recovery initially estimated at over a year [<https://www.dorts.ntpc.gov.tw/news/indexInfo/1A1dp1RBmLK7>]

環狀線11處受損嚴重 初估復原工期超過1年

PRIMARY 新北市政府捷運工程局

(New Taipei City Government, Department of Rapid Transit Systems), 24 April 2024
accessed 2026-08-10

Three weeks after the earthquake, and the only source found for the severity split: of the eleven displacements, seven severe at 20–92 cm and four at 3.5–6 cm. Also the initial estimate of 復原工作初步評估須約1年以上 and the intensity 5-strong recorded at the station nearest the damage. The Control Yuan report gives neither the split nor this estimate as its own.

-
- 180 Displacement investigation report published: contractor did not build to the approved drawings; the two city governments will jointly sue BES Engineering for NT\$1.927 billion [<https://www.ntpc.gov.tw/ch/home.jsp?id=e8ca970cde5c00e1&dataerno=9be8e636a516475bafac1bcac788d423>]

環狀線位移鑑定報告出爐!廠商未按核定施工圖施作 雙北市府將一同向中華工程提告 求償19.27億

PRIMARY 新北市政府 (New Taipei City Government), 3 January 2025 accessed 2026-08-10

The city's own announcement of the claim total and of the 40 mm / 5 mm / 41 mm account of the pin and the milled plate. A three-way breakdown of the NT\$1.927 billion circulates in search summaries and secondary reporting; a full fetch of this page on 2026-08-10 returned the total and no breakdown, so no breakdown is published here.

臺北捷運信義線CK570H區段標施工

PRIMARY Rapid Transit Systems & Technology, Taipei DORTS (臺北市政府捷運工程局《捷運技術》) accessed 2026-08-23

The later paper reports Dongmen at about 216 m by 25 m with a 32 m excavation, Xinyi shield drives of 1,219.3 m and 1,225.8 m, and 72 m diaphragm walls driven through 28 m of gravel to an impermeable layer.

210 **Tamsui–Xinyi line** [<https://zh.wikipedia.org/zh-tw/淡水信義線>]

淡水信義線

SECONDARY 維基百科 (Chinese Wikipedia) accessed 2026-08-10

Read as a lead index. Its infobox gives 路線長度 32.3公里 and 車站數目 29, and names C301, C381 and C381A as the fleet — all of which this page publishes only as conflicts, because the article's footnote list could not be retrieved and so none of it could be traced to what it cites.

211 Xinbeitou branch line [https://zh.wikipedia.org/zh-tw/新北投支線]

新北投支線

SECONDARY 維基百科 (Chinese Wikipedia) accessed 2026-08-10

全長1.2公里, which independently matches the builder's figure; 1997年3月28日：淡水線與新北投支線正式通車啟用; and 川崎重工371型 in three-car sets, 三節車廂為一組，以單組為一列. Its single external citation was checked on 10 August 2026 and does not support it — see the body.

212 Taiwan MOTC TDX — StationOfRoute, operator TRTC [https://tdx.transportdata.a.tw/]

PRIMARY Ministry of Transportation and Communications, Taiwan accessed 2026-08-05

Government open data, committed to this repository at data/tdx/. The route's revenue length is the CumulativeDistance against the last station of route BR-1; the RouteLength field is zero for every metro route, which is what once led this page to say the figure was not published.

213 Wenshan—Neihu Line [https://www.dorts.gov.taipei/cp.aspx?n=DBAC040496EFAB94] 文山內湖線

PRIMARY Taipei City Government, Department of Rapid Transit Systems (DORTS) accessed 2026-08-23

The builder's own project record for both halves: 木柵線 約10.9公里，設12座車站 and 內湖線 約14.8公里，設12座車站（地下段3.9公里，2座地下站）. Those two lengths are what add to the 25.7 km that circulates as this line's route length.

214 Wenhui line [https://zh.wikipedia.org/zh-tw/文湖線] 文湖線

SECONDARY 維基百科 (Chinese Wikipedia) accessed 2026-08-06

Carries both length figures in one infobox — 路線長度 25.7公里 against 營運長度 25.18公里 — which is what showed the two were never in conflict. Also the source for the 1,880 mm sleeper-centre spacing, the electrification, the speeds, and the identification of **BR13** and **BR14**.

215 Zhonghe–Xinlu Line — Zhonghe Line [https://www.dorts.gov.taipei/cp.aspx?n=122C012A85C41404] 中和新蘆線（中和線）

PRIMARY Taipei City Government, Department of Rapid Transit Systems (DORTS) accessed 2026-08-23

The Zhonghe line's own route description, length, station count and station list, and the Zhonghe Depot description: 全長約5.4公里，設4座車站, and 中和機廠...佔地約1.47公頃(包括捷運南勢角車站)。因用地面積之限制...提供營運列車停放、一般維修及清潔之功能. Also the note against Guting that its construction was folded into the Xindian line project (本站工程併入捷運新店線辦理), which is why the Zhonghe line's own count is 4 stations despite Guting appearing on the same list.

216 Zhonghe–Xinlu Line — Xinzhuang Line [https://www.dorts.gov.taipei/cp.aspx?n=122C012A85C41404&s=33245A586D747A2C] 中和新蘆線（新莊線）

PRIMARY Taipei City Government, Department of Rapid Transit Systems (DORTS)

accessed 2026-08-23

The Xinzhuang line's own route description and length (全長約19.7公里，設16座車站); every inspection and opening date for the Xinzhuang, Dongmen and Xinzhuang-Depot sections; the original and 5th-revision budget figures; the contract structure (CK570A-J, IKT02); and the Losheng-adjustment sentence: 新莊機廠因配合樂生療養院保存案計畫，調整機廠設施的配置。

臺鐵立體化

SECONDARY Wikipedia accessed 2026-08-27

Lead index for grade-separation project dates and scope; the Railway Bureau's own project pages could not be fetched (see the research file's Checked and failed section), so this is the strongest source obtained for most projects.

- 264 **Legislative Yuan record: Hualien-Ji'an railway elevation** [<https://www.ly.gov.tw/EngPages/Detail.aspx?nodeid=38514&pid=227478>]

花蓮市至吉安 7個平交道高架化有譜

PRIMARY Legislative Yuan (立法院) accessed 2026-08-27

A genuine primary government record confirming the Hualien elevation project's existence and its feasibility/planning-stage status, covering 7 named crossings.

- 265 **Taiwan Railway Administration Steam Locomotive Management and Lending Guidelines** [<https://www.railway.gov.tw/tra-tip-web/tip/file/6dc22469-5878-45f8-b4f4-d3ee6e751e35>]

臺灣鐵路管理局蒸汽機車管理及租借要點

PRIMARY Taiwan Railways Administration (交通部臺灣鐵路管理局) accessed 2026-08-27

Full internal administrative regulation, read directly. Dated originally 2001, last amended 2021. Source for the five-locomotive tiered rental system, running restrictions and CK101's parts-availability constraint.

- 266 Steam Queen CT273 returns for a limited three runs, Yuli to Taitung [<https://www.cna.com.tw/news/ahel/202506020030.aspx>]
蒸機女王CT273限定復活3趟次 行駛玉里至台東
SECONDARY Central News Agency (中央社) accessed 2026-08-27
Read via search synthesis rather than a full page fetch; reports CT273 hauling a 2025 summer tourist train, flagged as needing a full re-fetch to raise confidence.
-
- 267 List of Taiwan Railways steam locomotives [<https://zh.wikipedia.org/zh-tw/臺灣鐵路管理局蒸汽機車列表>]
臺灣鐵路管理局蒸汽機車列表
SECONDARY Wikipedia accessed 2026-08-27
Lead index only, not independently verified against a primary TRA source. Source for CK124's and LDK59's restoration years and reported base locations.
-
- 268 National Railway Museum opens its first phase on 31 July, 'Railway Museum, Moving Forward,' creating a new cultural landmark [https://www.nrm.gov.tw/News_Content.aspx?n=3307&s=241584]
國家鐵道博物館7月31日第一階段正式開放「鐵博・前行」打造文化新地標
PRIMARY National Railway Museum Preparatory Office (國家鐵道博物館籌備處) accessed 2026-08-27
Full press release, read directly, corroborated by two separate nrm.gov.tw pages and five independent secondary outlets. Source for the Phase 1 buildings, exhibitions and vehicle count.
-
- 269 National Railway Museum visitor information [<https://www.nrm.gov.tw/cp.aspx?n=3319>]
國家鐵道博物館參觀資訊
PRIMARY National Railway Museum (國家鐵道博物館) accessed 2026-08-27
Live museum page, read directly. Confirms the museum remains open and operating in 2026 on the Phase 1 footprint; states no Phase 2 date.
-
- 270 TTSB completes supplemental work on the Executive Yuan's Puyuma accident investigation and releases findings [<https://www.ttsb.gov.tw/1133/1178/1179/27718/post>]
運安會完成行政院普悠瑪事故調查報告補強作業，於109年10月19日發布調查結果
PRIMARY Taiwan Transportation Safety Board (國家運輸安全調查委員會) accessed 2026-08-27
Full official announcement, read directly. States that ATP was illegally isolated and the train exceeded the applicable speed, and that TRA failed to enforce its own existing rules; groups 27 recommendations by domain without itemising each.
-

- 271 60 km/h speed limit set for ATP failure; Puyuma and Taroko trains to be equipped by year end [<https://news.ltn.com.tw/news/life/breakingnews/3321111>]
ATP失效設60公里速限 普悠瑪、太魯閣號年底前裝設
SECONDARY Liberty Times (自由時報) accessed 2026-08-27
Source for the ATP isolation speed-limit system's 60 km/h cap, NT\$245 million budget and 52-trainset rollout scope.
-
- 272 Transport safety: the black-hole loop — TRA's track keeps getting rougher; 30 years built only half an ATP [<https://www.twreporter.org/a/taiwan-railway-examination-report-transportation-safety>]
【運安篇】安全黑洞迴圈：台鐵軌道愈修愈不平、30年只建了半套ATP
SECONDARY The Reporter (報導者) accessed 2026-08-27
Investigative journalism sourced to a named railway expert. Source for the roughly 30-year, NT\$3-4 billion cumulative upgrade figure and the alternative NT\$270 million ATP isolation speed-limit system budget.
-
- 273 Taoyuan Airport MRT (BOT and planning history) [<https://zh.wikipedia.org/zh-tw/桃園機場捷運>]
桃園機場捷運
SECONDARY 維基百科 (zh.wikipedia) accessed 2026-08-28
States the October 1996 BOT decision, Long Life International Development Co.'s 1998 winning bid, and the 31 December 2002 termination of the BOT contract.
-
- 274 Company milestones [https://www.tymetro.com.tw/tymetro-new/tw/_pages/about/history.html]
桃捷大事紀
PRIMARY Taoyuan Metro Corporation (桃園大眾捷運股份有限公司) accessed 2026-08-28
States 機場捷運線於106年3月2日正式營運通車 (opened 2 March 2017), plus test-operation, certification and trial-ride dates leading up to it, and the 26 June 2006 ceremonial groundbreaking presided over by the Premier.
-
- 275 Airport MRT project record [<https://www.dorts.ntpc.gov.tw/about/route/npw0dxy4Z3Ex>]
機場線
PRIMARY Department of Rapid Transit Systems, New Taipei City Government (新北市政府捷運工程局) accessed 2026-08-28
Builder's own project record: 路線全長51.03公里 (route length 51.03 km), 10.92 km underground / 40.11 km elevated, 7 underground / 15 elevated stations, two depots, and 工程建設總經費約1,138.5億元 — 1,138.5億元 converts to NT\$113.85 billion, not NT\$1,138.5 billion.
-
- 276 Airport MRT settles accounts: Railway Bureau to fine Marubeni NT\$2.5 billion and seek damages [<https://www.cna.com.tw/news/ahel/201701090048.aspx>]
機捷算總帳 高鐵局將罰丸紅25億並求償
SECONDARY Central News Agency (中央社) accessed 2026-08-28
Contemporaneous wire report (9 January 2017): NT\$2.5 billion delay-penalty cap, NT\$1.9 billion performance bond withheld for unauthorised signalling subcontracting, and Marubeni's own NT\$12.9 billion counter-claim over Bureau-directed design changes. States

no combined total; $2.5 + 1.9 = 4.4$, not 7.2.

-
- 277 Airport MRT running times missed target: Railway Bureau withholds over NT\$700 million from Marubeni [<https://www.cna.com.tw/news/firstnews/202108290054.aspx>]

機捷行車時間未達標 鐵道局扣九紅7億多元工程款

SECONDARY Central News Agency (中央社) accessed 2026-08-28

29 August 2021: NT\$726,926,496 withheld for missing three contractual performance standards — express journey time, average speed and headway — a separate, later dispute from the 2017 one.

-
- 278 Taoyuan Metro Green Line project page [<https://dorts.tycg.gov.tw/cp.aspx?Create=1&n=23132>]

桃園市政府捷運工程局-捷運綠線

PRIMARY Taoyuan City Department of Rapid Transit Systems (桃園市政府捷運工程局)

accessed 2026-08-24

Current Green Line station table, locations, structure, transfer notes, route length, station count, budget, approvals, package milestones and target opening.
